

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

N O T E.

THE VESSEL which has carried us so rapidly and safely round the globe claims a brief description. She was designed by Mr. St. Clare Byrne, of Liverpool, and may be technically defined as a screw composite three-masted top-sail-yard schooner. The engines, by Messrs. Laird, are of 70 nominal or 350 indicated horse-power, and developed a speed of 10·13 knots at the measured mile. The bunkers contain 80 tons of coal. The average daily consumption is 4 tons, and the speed 8 knots in fine weather. The principal dimensions of the hull are—length for tonnage, 157 ft.; beam extreme, 27 ft. 6 in.; displacement tonnage, 531 tons; area of midship section, 202 sq. ft.

Track of the 'Sunbeam.'

A

VOYAGE IN THE 'SUNBEAM.'

CHAPTER I.

FAREWELL TO OLD ENGLAND.

*Masts, spires, and strand receding on the right,
The glorious main expanding on the bow.*

AT noon on July 1st, 1876, we began the first stage of our voyage by steaming down to Sheerness, saluting our old friend the 'Duncan,' Admiral Chads's flagship, and passing through a perfect fleet of craft of all kinds. There was a fresh contrary wind, and the Channel was as disagreeable as usual under the circumstances. Next afternoon we were off Hastings, where we had intended to meet some friends; but, unfortunately, the weather was not sufficiently favourable for us to land; so we made a long tack out to sea, and, in the evening, found ourselves once more near the land, off Beachy Head. While becalmed off Brighton, we all—children included—availed ourselves of the opportunity to go overboard and have our first swim. We had steam up before ten, and again proceeded on our course. It was very hot, and sitting under the awning turned out to be the pleasantest occupation.

The contrast between the weather of the two following days was very great, and afforded a forcible illustration of the uncertainties, perhaps the fascinations, of yachting. We steamed quietly on, past the 'Owers' lightship, and the crowds of yachts at Ryde, and dropped anchor off Cowes at six o'clock.

On the morning of the 6th a light breeze sprang up, and enabled us to go through the Needles with sails up and funnel down, a performance of which all on board felt very proud, as many yachtsmen had pronounced it to be an impossibility for our vessel to beat out in so light a breeze.

The Channel was tolerably smooth outside the Isle of Wight, and during the afternoon we were able to hold on our course direct for Ushant. After midnight, however, the wind worked gradually round to the W.S.W., and blew directly in our teeth. A terribly heavy sea got up; and, as we were making little or no progress, it was decided to put in to Torquay or Dartmouth, and there await a change. We anchored in Torbay, about half a mile from the pier, at 8.30 a.m., and soon afterwards went ashore to bathe. We found, however, that the high rocks which surround the snug little bathing cove made the water as cold as ice.

Sunday, July 9th.—A calm at 2 a.m. Orders were given to get up steam; but the new coals from Chatham were slow to light, though good to keep up steam when once fairly kindled. For four long hours, therefore, we lolloped about in the trough of a heavy sea. By the time the steam was up so was the breeze—a contrary one, of course. We accordingly steamed and sailed all day, taking more water on board, though not really in any great quantity, than I had ever seen the good ship do before. She carries a larger supply of coal and other stores than usual, and no doubt the square yards on the

foremast make her pitch more heavily. We were all very sorry for ourselves, and 'church,' postponed from eleven until four o'clock, brought together but a small congregation.

On the 8th we were fairly away from Old England, and on the next day off Ushant, which we rounded at about 4.30 p.m., at the distance of a mile and a-half. The sea was tremendous, the waves breaking in columns of spray against the sharp needle-like rocks that form the point of the island.

Two days later we sailed into lovely, bright, warm, sunny weather, with a strong north-easterly breeze, a following sea, and an occasional long roll from the westward. But as the sun rose, the wind increased, and we got rather knocked about by the sea. A good deal of water came on board, and it was impossible to sit anywhere in comfort, unless lashed or firmly wedged in. We were, however, going ten knots through the water, on our course, under our new square head canvas; and this fact made up for a good deal of discomfort.

The thirty extra tons of spare sails, spars, and provisions, the fifteen tons of water, and the eighty-four tons of coal, made a great difference in our buoyancy, and the sea came popping in and out at the most unexpected places; much to the delight of the children, who, with bare feet and legs, and armed with mops and sponges, waged mimic war against the intruder and each other, singing and dancing to their hearts' content. This amusement was occasionally interrupted by a heavier roll than usual, sending them all into the lee scuppers, and sousing them from head to foot.

After dinner, however, we very nearly met with a most serious accident. We were all sitting or standing about the stern of the vessel, admiring the magnificent dark blue billows following us, with their curling white

crests, mountains high. Each wave, as it approached, appeared as if it must overwhelm us, instead of which, it rushed grandly by, rolling and shaking us from stem to stern, and sending fountains of spray on board. Tom was looking at the stern compass, Allnutt being close to him. Captain Lecky, seated on a large coil of rope, placed on the box of the rudder, was spinning Mabelle a yarn. A new hand was steering, and just at the moment when an unusually big wave overtook us, he unfortunately allowed the vessel to broach-to a little. In a second the sea came pouring over the stern, above Allnutt's head. The boy was nearly washed overboard, but he managed to catch hold of the rail, and, with great presence of mind, stuck his knees into the bulwarks. Kindred, our boatswain, seeing his danger, rushed forward to save him, but was knocked down by the return wave, from which he emerged gasping. The coil of rope, on which Captain Lecky and Mabelle were seated, was completely floated by the sea. Providentially, however, he had taken a double turn round his wrist with a reefing point, and, throwing his other arm round Mabelle, held on like grim death; otherwise nothing could have saved them. Captain Lecky, being accustomed to very large ships, had not in the least realised how near we were to the water in our little vessel, and was proportionately taken by surprise. In the early morning of the next day, the weather cleared a good deal, though the breeze continued. All hands were soon busily employed in repairing damages; and very picturesque the deck and rigging of the 'Sunbeam' looked, with the various groups of men, occupied upon the ropes, spars, and sails. Towards evening the wind fell light, and we had to get up steam. The night was the first really warm one we had enjoyed, and the stars shone out brightly. The sea, which had been of a lovely blue colour during the day, showed a slight phosphorescence after dark.

Thursday, July 13th.—When I went on deck, at half-past six, I found a grey, steamy, calm morning, promising a very hot day, without wind.

About 10.30 a.m., the cry of ‘Sail on the port beam!’ caused general excitement, and in a few minutes every telescope and glass in the ship had been brought to bear upon the object which attracted our attention, and which was soon pronounced to be a wreck. Orders were given to starboard the helm, and to steer direct for the vessel; and many were the conjectures hazarded, and the questions asked of the fortunate holders of glasses. ‘What is she?’ ‘Is there any one on board?’ ‘Where does she come from?’ ‘Can you read her name?’ ‘Does she look as if she had been long abandoned?’ Soon we were near enough to send a boat’s crew on board, whilst we watched their movements anxiously from the bridge. We could now read her name—the ‘*Carolina*’—surmounted by a gorgeous yellow decoration on her stern. She was of between two and three hundred tons burden, and was painted a light blue, with a red streak. Beneath her white bowsprit the gaudy image of a woman served as a figure-head. The two masts had been snapped short off about three feet from the deck, and the bulwarks were gone, only the covering board and stanchions remaining, so that each wave washed over and through her. The roof and supports of the deck-house and the companions were still left standing, but the sides had disappeared, and the ship’s deck was burst up in such a manner as to remind one of a quail’s back.

We saw the men on board poking about, apparently very pleased with what they had found; and soon our boat returned to the yacht for some breakers,¹ as the

¹ Small casks, used for carrying water in boats, frequently spelt *barricos*, evidently from the time of the old Spanish navigators.

'Carolina' had been laden with port wine and cork, and the men wished to bring some of the former on board. I changed my dress, and, putting on my sea boots, started for the wreck.

We found the men rather excited over their discovery. The wine must have been *very* new and *very* strong, for the smell from it, as it slopped about all over the deck, was almost enough to intoxicate anybody. One pipe had already been emptied into the breakers and barrels, and

The Derelict 'Carolina' laden with Port Wine.

great efforts were made to get some of the casks out whole; but this was found to be impossible, without devoting more time to the operation than we chose to spare. The men managed to remove three half-empty casks with their heads stove in, which they threw overboard, but the full ones would have required special appliances to raise them through the hatches. It proved exceedingly difficult to get at the wine, which was stowed underneath the cork, and there was also a quantity of cabin bulkheads and fittings floating about, under the influence of the

long swell of the Atlantic. It was a curious sight, standing on the roof of the deck-house, to look into the hold, full of floating bales of cork, barrels, and pieces of wood, and to watch the sea surging up in every direction, through and over the deck, which was level with the water's edge.

It would have delayed us too long to tow the vessel into the nearest port, 375 miles distant, or we might have claimed the salvage money, estimated by the experts at 1,500%. She was too low in the water for it to be possible for us, with our limited appliances, to blow her up; so we were obliged to leave her floating about as a derelict, a fertile source of danger to all ships crossing her track. With her buoyant cargo, and with the trade winds slowly wafting her to smoother seas, it may probably be some years before she breaks up. I only hope that no good ship may run full speed on to her, some dark night, for the 'Carolina' would prove almost as formidable an obstacle as a sunken rock.

A 'Mother Carey's chicken' hovered round the wreck while we were on board, and followed us to the 'Sun-beam;' and although a flat calm and a heavy swell prevailed at the time, we all looked upon our visitor as the harbinger of a breeze. In this instance, at least, the well-known sailor's superstition was justified; for, before the evening, the wind sprang up, and 'fires out and sails up' was the order of the day. We were soon bowling merrily along at the rate of seven knots an hour, while a clear starlight night and a heavy dew gave promise of a fine morrow.

Friday, July 14th.—We still have a light wind, right aft, accompanied by a heavy roll from the westward, which makes it impossible to sit anywhere with comfort, and difficult even to read. By 6 a.m. the sun had become very powerful, though its heat was tempered by

the breeze, which gradually increased throughout the day, until, having set all our fore-and-aft canvas, as well as our square sails, we glided steadily along, in delightful contrast to the uneasy motion of the morning, and of the past few days. Under the awning, with the most heavenly blue sky above, and the still darker clear blue sea beneath, stretching away in gentle ripples as far as the eye could reach—it was simply perfect.

In the course of the day, whilst Tom and I were sitting in the stern, the man at the wheel suddenly exclaimed, 'There's land on the port bow.' We knew, from the distance we had run, that this could not be the case, and after looking at it through the glasses, Tom pronounced the supposed land to be a thick wall of fog, advancing towards us *against* the wind. Captain Brown and Captain Lecky came from below, and hastened to get in the studding-sails, in anticipation of the coming squall. In a few minutes we had lost our fair breeze and brilliant sunshine, all our sails were taken flat aback, and we found ourselves enveloped in a dense fog, which made it impossible for us to see the length of the vessel. It was an extraordinary phenomenon. Captain Lecky, who, in the course of his many voyages, has passed within a few miles of this exact spot more than a hundred and fifty times, had never seen anything in the least like it. As night came on the fog increased, and the boats were prepared ready for lowering. Two men went to the wheel, and two to the bows to look out, while an officer was stationed on the bridge with steam-whistle and bell ready for an emergency; so that in case we ran into anything, or anything ran into us, we should at least have the satisfaction of knowing that, so far as we were concerned, it had all been done strictly according to Act of Parliament.

Saturday, July 15th.—Between midnight and 4 a.m. the fog disappeared, as suddenly as it had come on. We must have passed through a wide belt of it.

Towards the afternoon a nice breeze sprang up, and we were able to bank fires and sail.

Our First View of Madeira.

A. Y. R.

CHAPTER II.

MADEIRA, TENERIFFE, AND CAPE DE VERDE ISLANDS.

*Full many a green isle needs must be
In this wide sea of misery,
Or the mariner worn and wan
Never thus could voyage on.*

Sunday, July 16th.—Porto Santo being visible on the port bow, a quarter of a mile ahead, by 3.55 a.m. this morning, our three navigators congratulated themselves and each other on the good land-fall they had made.

It looks a curious little island, and is situated about thirty-five miles north-east of Madeira, with a high peak in the centre, of which we could only see the extreme point, appearing above the clouds.

It is interesting to know that it was from his observation of the drift-wood and débris washed on to the eastern shore that Columbus, who had married the daughter of

the Governor of Porto Santo, derived his first impressions of the existence of the New World. Here it was that he first realised there might possibly be a large and unknown country to the westward; here it was that he first conceived the project of exploring the hitherto unknown ocean and of discovering what new countries might bound its western shores.

An hour later we saw *Fora* and its light, at the extreme east of *Madeira*, and could soon distinguish the mountains in the centre of the latter island. As we rapidly approached the land, the beauty of the scenery became more fully apparent. A mass of dark purple volcanic rocks, clothed on the top with the richest vegetation, with patches of all sorts of colour on their sides, rises boldly from the sea. There are several small detached rocks, and one curious pointed little island, with an arch right through the middle of it, rather like the *Percé Rock* on the coast of *Nova Scotia*. We steamed slowly along the east coast, passing many pretty hamlets, nestled in bays, or perched on the side of the hills, and observing how every possible nook and corner seemed to be terraced and cultivated. Sugar-canes, Indian corn, vines, and many varieties of tropical and semi-tropical plants, grow luxuriantly in this lovely climate. Nearly all the cottages in the island are inhabited by a simple people, many of whom have never left their native villages, even to look at the magnificent view from the top of the surrounding mountains, or to gaze on the sea by which they are encompassed.

We dropped our anchor in the bay of *Funchal* at about twelve o'clock, and before breakfast was over found ourselves surrounded by a perfect flotilla of boats, though none of them dared approach very near until the health-officer had come alongside and pronounced us free from infection. At this moment all are complaining much of

the heat, which since yesterday has been very great, and is caused by the wind called 'Este,' blowing direct from the African deserts. It was 79° in the coolest place on board, and 84° on shore in the shade, in the middle of the day.

The African mail steamer, 'Ethiopia,' last from Bonny, West Coast of Africa, whence she arrived the day before yesterday, was lying in the bay, and the children went on board with some of our party to see her cargo of monkeys, parrots, and pineapples. The result was an importation of five parrots on board the 'Sunbeam;' but the monkeys were too big for us. Captain Dane, who paid us a return visit, said that the temperature here appeared quite cool to him, as for the last few weeks his thermometer had varied from 82° to 96° in the shade.

We had service at 4 p.m., and at 5 p.m. went ashore in a native boat, furnished with bilge pieces, to keep her straight when beached, and to avoid the surf, for it was too rough for our own boats. At the water's edge a curious sort of double sleigh, drawn by two oxen, was waiting. Into this we stepped, setting off with considerable rapidity up the steep shingly beach, under a beautiful row of trees, to the 'Praça,' where the greater portion of the population were walking up and down, or sitting under the shade of the magnolias. These plants here attain the size of forest-trees, and their large white wax-like flowers shed a most delightful fragrance on the evening air. There were graceful pepper vines too, and a great variety of trees only known to us in England in the form of small shrubs. This being a festival day, the streets were crowded with people from town and country, in their holiday attire. The door-posts and balconies of the houses were wreathed with flowers, the designs in many cases being very pretty. One arcade in particular was quite lovely, with arches made of double red geranium, mixed

with the feathery-looking pepper leaves, while the uprights were covered with amaryllis and white arum lilies. The streets were strewn with roses and branches of myrtle, which, bruised by the feet of the passers-by and the runners of the bullock sleigh, emitted a delicious aromatic odour.

A ride of about twenty minutes in the bullock sleigh, up a steep hill, by the side of a rocky torrent, whose banks were overgrown with caladiums and vines, brought us to our destination, Til, whence we had a splendid view of the town and bay stretching beneath us. During the ascent we passed several cottages, whose inhabitants stood airing themselves on the threshold after the great heat of the day, and through the open doorways we occasionally got a peep into the gardens beyond, full of bright flowers, and luxuriant with vines, fig-trees, and bananas. As we sat in the terrace garden at Til we enjoyed the sweet scent of the flowers we could no longer see, and listened to the cool splash of the water in the fountain below; whilst Allnutt, with unceasing energy, searched amongst the bushes for moths, of which he found a large number.

We jogged down the hill a great deal faster than we had come up, stopping only for a short time in the now more than ever crowded 'Praça,' to listen to one or two airs played by the Portuguese band, before we got back to the yacht at about half-past ten.

Next morning we were off to the fish market by seven o'clock, but it was not a good time for our visit, as there had been no moon on the previous night; and, though there were fish of various kinds, saw nothing specially worthy of notice. The picturesque costumes of the people were, however, interesting. We afterwards went to the fruit-market, though it was not specially worth seeing, for most of the fruit and vegetables are brought in boats from villages on the sea-shore; and, as it is necessary to

wait until the sea-breeze springs up, they do not arrive until midday.

The natives seem almost amphibious in their habits, and the yacht is surrounded all day by boats full of small boys, who will dive to any depth for sixpence, a dozen of them spluttering and fighting for the coin in the water at the same time. They will go down on one side of the yacht too, and bob up on the other, almost before you have time to run across the deck to witness their reappearance.

The Loo Rock, with its old fortress, close to our anchorage, forms a picturesque object; and the scene from the yacht, enlivened by the presence of numerous market-boats, laden with fruit and vegetables, is very pretty. We lie about 150 yards from the shore, just under Mr. Danero's quinta. The cliff just here is overhung with bougainvillæas, geraniums, fuchsias, aloes, prickly pears, and other flowers, which grow luxuriantly quite down to the water's edge, wherever they can contrive to find a root-hold.

After five o'clock tea we rode up the Mount and through the woods on horseback, along a road gay with masses of wild geranium, hydrangea, amaryllis, and fuchsia. We dismounted at a lovely place, which contains a large number of rare trees and plants, brought from all parts of the world. Here were enormous camellias, as well as purple, red, and white azaleas, Guernsey lilies, all growing in the greatest profusion.

Our descent of the Mount, by means of a form of conveyance commonly used on the island, was very amusing. At the summit we found basket-work sleighs, each constructed to hold two people, and attended by a couple of men, lashed together. Into these we stepped, and were immediately pushed down the hill at a tremendous pace. The gliding motion is delightful, and was altogether a

novelty to us. The men manage the sleighs with great skill, steering them in the most wonderful manner round the sharp angles in the zigzag road, and making use of their bare feet as brakes when necessary. The turns were occasionally so abrupt, that it seemed almost impossible that we could avoid being upset; but we reached the bottom quite safely, the only danger being the risk of fire from the friction of the steel runners against the gravel road.

Tuesday, July 18th.—We were called at 4.30 a.m., and went ashore soon after six to meet some friends, with whom we had arranged to ride up to the Gran Corral, and to breakfast there, 5,000 feet above the level of the sea.

There was a little delay in mounting our horses, under the shade of the fig-trees; but when we were once off, a party of eleven, the cavalcade became quite formidable. As we clattered up the paved streets, between vineyard and garden walls, 'curiosity opened her lattice,' on more than one occasion, to ascertain the cause of the unwonted commotion. The views on our way, as we sometimes climbed a steep ascent or descended a deep ravine, were very varied, but always beautiful. About half-way up we stopped to rest under a delightful trellis of vines, by the side of a rushing mountain stream, bordered with ferns; then, leaving the vineyards and gardens behind us, we passed through forests of shady Spanish chestnut trees, beneath which stretched the luxurious greensward.

At ten o'clock we quitted this grateful shade, and arrived at the neck of the pass, facing the Gran Corral, where we had to make our choice of ascending a conical hill, on our left, or the Torrinhás Peak, on our right. The latter was chosen, as promising the better view, although it was rather farther off, so we were accordingly seized upon by some of the crowd of peasants who sur-

rounded us, and who at once proceeded to push and pull us up a steep slippery grass slope, interspersed with large boulders. The view from the top, looking down a sheer precipice of some 1,500 feet in depth into the valley below, was lovely. Quite at the bottom, amid the numerous ravines and small spurs of rocks by which the valley is intersected, we could distinguish some small patches of cultivated ground. Above our heads towered the jagged crests of the highest peaks, Pico Ruivo and others, which we had already seen from the yacht, when we first sighted the island.

A pleasant walk over some grassy slopes, and two more hard scrambles, took us to the summit of the Torrinhás Peak; but the charming and extensive view towards Camara de Lobos, and the bay and town of Funchal, was an ample reward for all our trouble. It did not take us long to get back to the welcome shade of the chestnut trees. It was now eleven o'clock. Mr. Miles, of the hotel, had promised that our provisions should be sent up to us by nine o'clock, but it was midday before we met the men carrying the hampers on their heads. There was now nothing for it but to organise a picnic on the terrace of Mr. Veitch's deserted villa, beneath the shade of camellia, fuchsia, myrtle, magnolia, and pepper-trees, from whence we could also enjoy the fine view of the fertile valley beneath us and the blue sea sparkling beyond.

Wednesday, July 19th.—We were so tired after our exertions of yesterday, that it was nine o'clock before we all mustered for our morning swim.

In the evening I went to the English cemetery, which is very prettily laid out and well kept. The various paths are shaded by pepper-trees, entwined with bougainvillæa, while in many places the railings are completely covered by long trailing masses of stephanotis in full

bloom. Some of the inscriptions on the tombs are extremely touching, and it is sad to see, as is almost always the case in places much resorted to by invalids, how large a proportion of those who lie buried here have been cut off in the very flower of their youth. Having seen and admired Mrs. Foljambe's charming garden by daylight, we returned on board to receive some friends.

After the departure of our guests, at about ten o'clock, we steamed out of the bay, where we found a nice light breeze, which enabled us to sail.

Thursday, July 20th.—All to-day has been taken up in arranging our photographs, journals, &c. &c., and in preparing for our visit to Teneriffe. About twelve o'clock the wind fell light and we tried fishing, but without success, though several bonitos or flying fish were seen. It was very hot, and it seemed quite a relief when, at eight o'clock in the evening, we began steaming, thus creating a breeze for ourselves.

Friday, July 21st.—We all rose early, and were full of excitement to catch the first glimpse of the famous Peak of Teneriffe. There was a nice breeze from the north-east, the true trade wind, we hope, which ought to carry us down nearly to the Line. The morning being rather hazy, it was quite ten o'clock before we saw the Peak, towering above the clouds, right ahead, about fifty-nine miles off. As we approached, it appeared less perpendicular than we had expected, or than it is generally represented in pictures. The other mountains, too, in the centre of the island, from the midst of which it rises, are so very lofty that, in spite of its conical sugar-loaf top, it is difficult at first to realise that the Peak is 12,180 feet high.

We dropped anchor under its shadow in the harbour of Orotava in preference to the capital, Santa Cruz, both on account of its being a healthier place, and also

in order to be nearer to the Peak, which we wished to ascend.

The heat having made the rest of our party rather lazy, Captain Lecky and I volunteered to go on shore to see the Vice-Consul, Mr. Goodall, and try to make arrangements for our expedition. It was only 2 p.m., and very hot work, walking through the deserted streets, but luckily we had not far to go, and the house was nice and cool when we got there. Mr. Goodall sent off at once for a carriage, despatching a messenger also to the mountains for horses and guides, which there was some difficulty in obtaining at such short notice.

Having organised the expedition, we re-embarked to dine on board the yacht, and I went to bed at seven, to be called again, however, at half-past ten o'clock. After a light supper, we landed and went to the Vice-Consul's, arriving there exactly at midnight. But no horses were forthcoming, so we lay down on our rugs in the patio, and endeavoured to sleep, as we knew we should require all our strength for the expedition before us.

There were sundry false alarms of a start, as the horses arrived by ones and twos from the neighbouring villages, accompanied by their respective owners. By two o'clock all our steeds, twelve in number, had assembled, and in another quarter of an hour we were leaving the town by a steep stony path, bordered by low walls. There was no moon, and for the first two hours it was very dark. At the end of that time we could see the first glimmer of dawn, and were shortly afterwards able to distinguish each other and to observe the beautiful view which lay below us as we wended our way up and up between small patches of cultivation. Soon we climbed above the clouds, which presented a most curious appearance as we looked down upon them. The strata through which we had passed was so dense and so white,

NETAMA PLAINS.

that it looked exactly like an enormous glacier, covered with fresh fallen snow, extending for miles and miles ; while the projecting tops of the other Canary Islands appeared only like great solitary rocks.

The sun had already become very oppressive, and at half-past seven we stopped to breakfast and to water the horses. Half-past eight found us in the saddle again, and we began to traverse a dreary plain of yellowish white pumice-stone, interspersed with huge blocks of obsidian, thrown from the mouth of the volcano. At first the monotony of the scene was relieved by large bushes of yellow broom in full flower, and still larger bushes of the beautiful *Retama blanca*, quite covered with lovely white bloom, scenting the air with its delicious fragrance, and resembling huge tufts of feathers, eight or nine feet high. As we proceeded, however, we left all traces of vegetation behind us. It was like the Great Sahara. On every side a vast expanse of yellow pumice-stone sand spread around us, an occasional block of rock sticking up here and there, and looking as if it had indeed been fused in a mighty furnace. By half-past ten we had reached the ' Estancia de los Ingleses,' 9,639 feet above the level of the sea, where the baggage and some of the horses had to be left behind, the saddles being transferred to mules for the very steep climb before us. After a drink of water all round, we started again, and commenced the ascent of the almost perpendicular stream of lava and stone, which forms the only practicable route to the top. Our poor beasts were only able to go a few paces at a time without stopping to regain their breath. The loose ashes and lava fortunately gave them a good foothold, or it would have been quite impossible for them to get along at all. One was only encouraged to proceed by the sight of one's friends above, looking like flies clinging to the face of a wall. The road, if such it can be called, ran in zigzags,

each of which was about the length of two horses, so that we were in turns one above another. There were a few slips and slides and tumbles, but no important casualties ; and in about an hour and a-half we had reached the 'Alta Vista,' a tiny plateau, where the horses were to be left.

The expedition so far had been such a fatiguing one, and the heat was so great, that the children and I decided to remain here, and to let the gentlemen proceed alone to the summit of the Peak. It was more than three hours before Tom and Captain Lecky reappeared, to be soon followed by the rest of the party. Whilst they rested and refreshed themselves with ice, they described the ascent as almost an impossibility for a lady. First they had scrambled over huge blocks of rough lava to the tiny plain of the Rambleta 11,466 feet above the level of the sea, after which they had to climb up the cone itself, 530 feet in height, and sloping at an angle of 44 degrees. It is composed of ashes and calcined chalk, into which their feet sank, while, for every two steps they made forwards and upwards, they slipped one backwards. But those who reached the top were rewarded for their exertions by a glorious view, and by the wonderful appearance of the summit of the Peak. The ground beneath their feet was hot, while sulphurous vapours and smoke issued from various small fissures around them, though there has been no actual eruption from this crater of the volcano since 1704. They brought down with them a beautiful piece of calcined chalk, covered with crystals of sulphur and arsenic, and some other specimens. Parched and dry as the ground looked where I was resting, a few grains of barley, dropped by mules on the occasion of a previous visit, had taken root and had grown up into ear ; and there were also a few roots of a sort of dog violet, showing its delicate lavender-coloured flowers 11,000 feet

above the sea, and far beyond the level of any other vegetation.

It was impossible to ride down to the spot where we had left the baggage animals, and the descent was consequently very fatiguing, and even painful. At every step our feet sank into a mass of loose scoræ and ashes; and so we went slipping, sliding, and stumbling along, sometimes running against a rock, and sometimes nearly pitching forwards on our faces. All this too beneath a blazing sun, with the thermometer at 78°, and not a vestige of shade. At last Tom and I reached the bottom, where, after partaking of luncheon and draughts of quinine, we lay down under the shadow of a great rock to recruit our weary frames.

Refreshed by our meal, we started at six o'clock on our return journey, and went down a good deal faster than we came up. Before the end of the pumice-stone or Retama plains had been reached, it was nearly dark. Sundry small accidents occurring to stirrup-leathers, bridles, and girths—for the saddlery was not of the best description—delayed us slightly, and as Tom, Dr. Potter, Allnutt, and the guide had got on ahead, we soon lost sight of them. After an interval of uncertainty, the other guides confessed that they did not know the way back in the dark. This was not pleasant, for the roads were terrible, and during the whole of our journey up, from the port to the Peak, we had met only four people in all—two goatherds with their flocks, and two 'nevéros,' bringing down ice to the town. There was therefore not much chance of gaining information from any one on our way down. We wandered about among low bushes, down watercourses, and over rocks for a long time. Horns were blown, and other means of attracting attention were tried; first one and then another of the party meanwhile coming more or less to grief.

About ten o'clock we saw a light in the distance, and with much shouting woke up the inhabitants of the cottage whence it proceeded, promising to reward them liberally if they would only show us our way back. Three of them consented to do this, and provided themselves accordingly with pine-torches, wrapped round with bracken and leaves. One, a very fine man, dressed in white, with his arm extended above his head, bearing the light, led the way; another walked in front of my horse, while the third brought up the rear. They conducted us down the most frightfully steep paths until we had descended beneath the clouds, when the light from our torches threw our shadows in gigantic form upon the mists above, reminding us of the legend of the 'Spectre of the Brocken.' At last the torches began to go out, one by one, and just as the last light was expiring we arrived at a small village, where we of course found that everybody was asleep. After some delay, more torches were procured and a fresh guide, who led us into the comparatively good path towards Puerto Oratava. Finally, half an hour after midnight, we arrived at the house of the Vice-Consul. We were too tired to do anything but go straight on board the yacht, where we were glad indeed to retire to our berths. This was at 3.30 a.m., exactly twenty-nine hours since we had been called on Friday night. It is certainly too long an expedition to be performed in one day. Tents should be taken, and arrangements made for camping out for one, if not two nights. There are so many objects and places of interest, not only on, but around, the Peak, that it is a pity to see them only when hurried and fatigued.

Sunday, July 23rd.—Orders had been given not to call us nor to wash decks, and it was consequently half-past ten before anyone awoke, and midday before the first of our party put in an appearance on deck.

About five o'clock we went ashore, and drove up to

Villa Orotava. The wide road is macadamised and marked with kilometre stones, and is planted on either side with pepper-trees, plane-trees, and the *Eucalyptus globulus*, which has grown 35 metres, or 115 feet, in seven years. The hedges are formed of blue plumbago, scarlet geranium, yellow acacia, lavender-coloured heliotrope, white jasmine, and pink and white roses.

After driving a few miles, we turned down an old paved road towards the sea, and, by dint of a considerable amount of shaking, arrived at the celebrated Botanical Gardens, mentioned by Humboldt and others. We passed through a small house, with a fine dragon-tree on either side, and entered the gardens, where we found a valuable collection of trees and shrubs of almost every known species. The kind and courteous Curator, Don Hermann Wildgaret, accompanied us, and explained the peculiarities of the many interesting plants, from Europe, Asia, Africa, America, Australia, New Zealand, and the various islands of the North and South Pacific and Indian Oceans. The climate of Teneriffe is so equable, that the island forms a true garden of acclimatisation for the vegetable productions of the various countries of the world; by the judicious expenditure of a little more money, this establishment might be made an important means of introducing to Europe many new and valuable plants. At present the annual income is 5,000 francs, the salary of the Curator being 1,000 francs.

A rough drive over paved roads, commanding extensive views of sea and rocks, and of some palm-trees on a promontory in the distance, brought us, at about seven o'clock, to the boat, which was waiting our return. We arrived in due course on board the 'Sunbeam,' laden with bouquets of the choicest flowers, and soon after dinner we all retired to bed, not having yet recovered from the fatigues of yesterday.

Monday, July 24th.—What one gains in the beauty and abundance of vegetable life here, one loses in its rapid and premature decay. Fruit gathered in the morning is scarcely fit to eat at night, and the flowers brought

A Palm-tree in a Garden, Orotava, Teneriffe.

on board yesterday evening were dead to-day at 4.30 a.m.; whilst some of the roses we brought from Cowes lasted until we reached Madeira, though it must be owned so many fell to pieces that my cabin used to be daily swept with rose-leaves instead of tea-leaves.

We went ashore soon after six, and drove straight to the garden of the Marquis de Sonzal, where there is a beautiful palm-tree, 101 feet high, the remains of an enormous dragon-tree, old even in the fifteenth century, besides hedges of myrtle, jasmine, and clematis, and flowers of every description in full bloom. The dragon-tree is a species of *dracæna*, and looks rather like a gigantic candelabra, composed of a number of yuccas, perched on the top of a gnarled and somewhat deformed stem, half palm half cactus.

Every one here, as in Madeira, has been more or less ruined by the failure of the vines. Most of the large landed proprietors have left their estates to take care of themselves; and the peasants, for the last few years, have been emigrating by hundreds to Caraccas, in Venezuela. Things are, however, beginning to look up a little now. The cultivation of cochineal appears to succeed, though the price is low; coffee answers well; and permission to grow tobacco has been obtained from the Spanish Government, which promises to purchase, at a certain fixed rate, all that can be produced. Still, people talk of the Island of Teneriffe as something very different now from what it was twenty-five or thirty years ago.

The Marquis de la Candia and Don Hermann Wildgaret returned on board with us to breakfast. The anchor had been weighed, and the 'Sunbeam' was slowly steaming up and down, waiting for us. The stream of visitors had been as great and as constant as ever during our absence, in spite of the heavy roll of the sea, and the deck seemed quite covered with baskets of flowers and fruit, kindly sent on board by the people who had been over the yacht the day before.

Immediately after breakfast, our friends bade us adieu, and went ashore in the shore-boat, while we steamed along the north side of the island, past the splendid cliffs of

Buena Vista, rising 2,000 feet sheer from the sea, to Cape Teno, the extreme western point of Teneriffe. In the distance we could see the Great Canary, Palma, and Hierro, and soon passed close to the rocky island of Gomera. Here, too, the dark cliffs, of volcanic form and origin, are magnificent, and as we were almost becalmed by the high land whilst we sailed along the north shore of the island, we had ample opportunities of admiring its rugged beauty. During the night we approached Palma, another large island of the Canary group, containing one of the most remarkable *calderas*, or large basins formed by volcanic action, in the world.

CHAPTER III.

PALMA TO RIO DE JANEIRO.

*A wet sheet and a flowing sea,
 A wind that follows fast
 And fills the white and rustling sail
 And bends the gallant mast.*

Tuesday, July 25th.—There was not much wind during the night, and Palma was consequently still visible when I came on deck at daybreak. We had a light fair wind in the morning, accompanied by a heavy swell, which caused us to roll so much that I found it very difficult to do anything. Several shoals of flying fish skimmed past us along the surface of the water, occasionally rising to a considerable height above it. Their beautiful wings, glittering in the bright sunlight, looked like delicate silver filigree-work.

Saturday, July 29th.—For the last three days we have been going on quietly with fair, warm weather, but a nice fresh breeze sprang up to-day. At midday the sun was so exactly vertical over our heads, that it was literally possible to stand under the shadow of one's own hatbrim, and be sheltered all round. Our navigators experienced considerable difficulty in taking their noon-tide observations, as the sun appeared to dodge about in every direction.

About two o'clock we made the high land of St.

Antonio, one of the Cape de Verde Islands, and, soon afterwards, the lower land of St. Vincent. Some doubt existing as to the prevalence of fever at the latter place, Tom decided not to stop there, for fear of having to undergo quarantine at Rio de Janeiro. We therefore shortened sail and passed slowly between the islands to the anchorage beyond the Bird Rock. This is a very small island, of perfectly conical form, covered with thousands of sea-fowl, who live here undisturbed by any other inhabitants. The town of Porto Grande, with its rows of white houses on the sea-shore, at the base of the rocky crags, looked clean and comfortable in the evening light. During the day, however, it must be a hot and glaring place, for there are no trees to afford shade, nor, indeed, any kind of vegetation. The water, too, is bad, and all supplies for passing steamers are brought from the other islands, at very uncertain intervals. It is still a great coaling-station, though not so much used as it was formerly, before the opening of the Suez Canal. The ships come out with coal, and go away in ballast (there is nothing else to be had here), procured from a point near the town, to Rio or elsewhere, where they pick up their homeward cargo of fruit, &c.

The absence of twilight in these latitudes, both at dawn and sunset, is certainly very remarkable. This morning, at four o'clock, the stars were shining brightly; ten minutes later the day had commenced to break; and at half-past five the sun had risen above the horizon, and was gilding the surrounding mountain tops.

Sunday, July 30th.—About 10 a.m. we were off Tarafal Bay—a most hopeless-looking place for supplies. High rocky mountains, sandy slopes, and black volcanic beach, composed a scene of arid desolation, in the midst of which was situated one small white house, with four windows and a thatched roof, surrounded by a little green patch of sugar-canes and cocoa-nut palms.

But the result proved the sageness of the advice contained in the old proverb, not to trust to appearances only; for, whilst we were at breakfast, Mr. Martinez, the son of the owner of the one whitewashed cottage to be seen, came on board. To our surprise he spoke English extremely well, and promised us all sorts of supplies, if we could wait until three o'clock in the afternoon. Having agreed to do this, we shortly afterwards went ashore, where, after some little difficulty, we succeeded in effecting a landing. Our feet immediately sank into the hot black sand, composed entirely of volcanic deposits and small pieces, or rather grains, of amber, through which we had a fatiguing walk until we reached some palm-trees, shading a little pool of water. Here we left some of the men, with instructions to fill the breakers they had brought with them, while we walked on along the beach, past the remains of an English schooner that caught fire not far from this island, and was run ashore by her captain, thirty years ago. We then turned up a narrow shadeless path, bordered by stone walls, leading away from the sea, past a sugar-mill and a ruin. A few almond, castor-oil, and fig-trees were growing amongst the sugar-canes, and as we mounted the hill we could see some thirty round straw huts, like bee-hives, on the sandy slopes beside the little stream. An abrupt turn in the mountains, amid which, at a distance of three leagues, this tiny river takes its rise, hides it from the sea, so that the narrow valley which it fertilises looks like a small oasis in the desert of rocks and sand.

Mr. Martinez's house, where we sat for some time, and beneath the windows of which the one stream of the island runs, was comparatively cool. Outside, the negro washerwomen were busy washing clothes in large turtle-shell tubs, assisted, or hindered, by the 'washerwoman bird,' a kind of white crane, who appeared quite tame, playing

about just like a kitten, pecking at the clothes or the women's feet, and then running away and hiding behind a tree. The stream was full of water-cresses, while the burnt-up little garden contained an abundance of beautiful flowers. There were scarlet and yellow mimosas, of many kinds, combining every shade of exquisite green velvety foliage, alpinias, with pink, waxy flowers and crimson and gold centres, oleanders, begonias, hibiscus, allamandas, and arum and other lilies.

Mr. Bingham sketched, I took some photographs, Dr Potter and the children caught butterflies, and the rest of our party wandered about. Every five minutes a negro arrived with a portion of our supplies. It was very amusing to see the things arrive. They were brought in by people varying in colour from dark yellow to the blackest ebony, and ranging in size from fine stalwart men, over six feet in height, to tiny little blackies of about three feet six, with curly hair, snowy teeth, and mischievous beady eyes. The arrival of the provision boat and the transfer of its miscellaneous cargo to the 'Sunbeam' was quite an amusing sight. The pretty black goat and the sheep bleated, the fowls cackled, and the ducks quacked, while the negroes chatted and laughed as they handed and hauled on board fish of all shapes and sizes, bunches of bananas, piles of cocoa-nuts, sacks of potatoes, and many other things, finishing up with a tiny black boy, about three years old, whom I think they would rather have liked to leave behind with us, if we would only have taken him. The fish proved excellent, though some of them really seemed almost too pretty to eat. A brilliant gold fish, weighing about three pounds, and something like a grey mullet in flavour, was perhaps the best.

The night was fearfully close, muggy, and thundery, the temperature in the cabins being 89°, in spite of open

sky-lights and port-holes. Generally speaking, it has not hitherto been as hot as we expected, especially on board the yacht itself. On deck there is almost always a nice breeze, but below it is certainly warm.

Tarafal Bay, St. Antonio.

A Y.B.

Tuesday, August 1st.—Yesterday we were still under sail, but to-day it has been necessary to steam, for the wind has fallen too light. There was a heavy roll from the south, and the weather continued hot and oppressive.

In anticipation of the heavy equatorial rains, which Captain Lecky had predicted might commence to-day, we had had the awnings put up; a fortunate piece of foresight, for, before midnight, the rain came down in torrents.

Wednesday, August 2nd.—At daybreak the sky was covered with heavy black clouds, and the atmosphere was as hot and muggy as ever. We had a great deal of rain during the day, and took advantage of the opportunity to fill every available tub, bucket, and basin, to say nothing of the awnings.

Friday, August 4th.—We were only 289 miles off Sierra Leone in the morning, and at noon therefore Tom decided to put about. Having done so, we found that we went along much more easily and quite as fast on the other tack. We maintained a good rate of speed on our new course, which was now nearly due west, passing a large barque with every stitch of canvas set, hand over hand.

We are still in the Guinea current, and the temperature of the water is 82° , even in the early morning; but the heat of the sun does not seem to have much effect upon it, as it does not vary to any great extent during the day.

In the evening we saw the Southern Cross for the first time, and were much disappointed in its appearance. The fourth star is of smaller magnitude than the others, and the whole group is only for a very short time in a really upright position, inclining almost always either to one side or the other, as it rises and sets.

Tuesday, August 8th.—We crossed the line at daylight.

This event caused much fun and excitement, both in cabin and forecastle. The conventional hair was put across the field of the telescope for the unsophisticated

'really to see the line,' and many firmly believed they did see it, and discussed its appearance at some length. Jim Allen, one of our tallest sailors, and coxswain of the gig, dressed in blue, with long oakum wig and beard, gilt paper crown, and trident and fish impaled in one hand, was seated on a gun-carriage, and made a capital Father Neptune.

Soon afterwards we saw an enormous shoal of grampuses, large black fish, about 25 feet in length, something between a dolphin and a whale, with the very ugliest jaws, or rather snouts, imaginable. They are of a predatory and ferocious disposition, attacking not only sharks, dolphins, and porpoises, but even whales, more than twice their own size. We also passed through enormous quantities of flying fish, no doubt driven to the surface by dolphins and bonitos. They were much larger and stronger in the wing than any we have hitherto seen.

At noon we were 250 miles off St. Paul's Rocks.

Thursday, August 10th.—A very hot, showery day. Saw two large ships in the distance. In the morning we were almost becalmed for a time, but the breeze returned during the afternoon, and we were able to proceed on our course. I think this has been the most lovely of the many exquisite days we have enjoyed since we left England. It commenced with a magnificent sunrise, and ended with an equally gorgeous sunset, only to be succeeded by a beautiful moonlight night, so clear and bright that we could see to read ordinary print on deck.

Saturday, August 12th.—At noon we were 300 miles off Bahia, a place we have made up our minds not to visit, as it would lengthen our voyage considerably, and there is not much to see there. We have therefore decided to proceed direct to Rio, where we are looking forward to arrive on Wednesday or Thursday next.

The night was showery, with a good deal of wind and sea.

Sunday, August 13th.—Sailing in the tropics is really very delightful! When going to the westward, there is almost always, at this season of the year, a favourable breeze, and the weather is generally either quite fair or moderately so.

Whispered to it, westward, westward,
And with speed it darted forward.

We had service at 11.15 a.m., and again at 5.30 p.m. The choir has considerably improved; one of our new men plays the violin very well, and frequently accompanies the children and the nurse in their songs. On a clear calm night, beneath a tropical sky, when the members of this little group assemble on deck, and, by the light of a lantern, sing some of their simple songs, the effect produced is both melodious and picturesque.

Monday, August 14th.—This morning we saw a small schooner ahead, and thinking from her manœuvres that she wished to speak us, we made our number and ran towards her. We soon found out, however, that she was a whaler, in chase of two large grampuses. She had two men on the look-out in the cross-trees, in a sort of iron cage; and though she was of much smaller tonnage than the 'Sunbeam,' she carried five big boats, one of which, full of men, was ready to be lowered into the water, the instant they had approached sufficiently near to the whale or grampus. These seas used formerly to abound with whalers, but they are now much less numerous, the seasons having been bad of late.

To-night the stars were especially brilliant, and we spent some hours in trying to make out their names. Vega, our polar star for some time to come, shone conspicuously bright, and the Southern Cross could be seen to great advantage.

Wednesday, August 16th.—We had a fine fair breeze all day, and at 5 p.m. there was a cry from the mast-head of 'Land ahead!' Great excitement immediately prevailed on board, and Tom and Captain Brown rushed, for about the twelfth time, to the foretop to see if the report was true. They were soon able to announce that Cape Frio was visible on the port bow, about thirty-five miles distant. After even a fortnight at sea, an indescribable sensation is produced by this cry, and by the subsequent sight of the land itself. When we came up on deck this evening, after dinner, we all gazed on the lighthouse on the still distant shore as if we had never beheld such a thing in our lives before. The colour and temperature of the water had perceptibly changed, the former from a beautiful, clear, dark ultramarine to a muddy green; innumerable small birds, moths, locusts, and grasshoppers came on board; and, having given special orders that we were to be called early the next morning, we went to bed in the fond hope that we should be able to enter Rio harbour at daybreak.

Thursday, August 17th.—'L'homme propose; Dieu dispose.' Steam was up at midnight, but by that time it was blowing half a gale of wind from the south-west, with such a steep short sea that the screw was scarcely ever properly immersed, but went racing round and round in the air with tremendous velocity, as we pitched and rolled about. Our progress was therefore at the rate of something rather under a mile an hour, and at daybreak, instead of entering the harbour of Rio, as we had hoped to do, we found ourselves close to Cape Frio.

About 8 a.m. matters mended, the wind moderating and changing its direction slightly; so that, under steam and sail, we were soon going along the coast at the rate of four or five miles an hour. The surf was breaking with a loud roar upon the white sandy beach, while the spray

was carried by the force of the wind far inland, over the strip of flat fertile-looking country, lying between the sea and a chain of low sugarloaf-shaped mountains, parallel with the shore, and only a short distance off.

Our course lay between the mainland and the islands of Maya and Payo, where the groves of bananas and other trees looked very miserable in the wind. The tall isolated palm-trees, whose elastic stems bowed readily before the fury of the blast, looked, as they were twisted and whirled hither and thither, like umbrellas turned inside out. Passing the false Sugarloaf mountain, as it is called, we next opened out the true one, the Gavia, and the chain of mountains beyond, the outlines of which bear an extraordinary resemblance to the figure of a man lying on his back, the profile of the face being very like that of the late Duke of Wellington. As the sun sank in gorgeous splendour behind these hills, I think I never saw a grander or more beautiful sight; though the sky was so red and stormy-looking that our hopes of a fine day to-morrow were but faint.

Before entering the harbour, a bar had to be crossed, which is a dangerous operation all the world over. The skylights and hatches were fastened down, and those of our party who did not like being shut up below took their places on the bridge, where, for the first time since we left England, it felt really quite cold. As we advanced, the beautiful harbour, with its long rows of glittering gas-lights, extending for miles on either side of the bay, and illuminating the city and suburbs, gradually became visible. On our left lay the two islands, Rodonda and Raza, on the latter of which is situated a lighthouse. The wind was blowing off the land when we reached the bar, so that, after all our preparations, there was hardly any sea to encounter, and the moment we were over, the water on the other side was perfectly smooth. A gun

and a blue light from Fort Santa Cruz, answered immediately by a similar signal from Fort Santa Lucia, announced our arrival, and we shortly afterwards dropped our anchor in the quarantine ground of Rio close to Botafogo Bay, in the noble harbour of Nictheroy.

After dinner it rained heavily, and continued to do so during the whole night.

CHAPTER IV.

RIO DE JANEIRO.

*The sun is warm, the sky is clear,
The waves are dancing fast and bright,
Blue isles and snowy mountains wear
The purple noon's transparent light.*

Friday, August 18th.—The clouds still hung heavy on the hills, or rather mountains, which surround the bay, occasionally descending in the form of torrents of rain, and hiding everything from our view.

Early in the morning we weighed anchor and steamed up the bay to the man-of-war anchorage, a much pleasanter situation than the quarantine harbour, where we had brought up last night. About 9.30 a.m. the health officers came on board, and half an hour later we had a visit from the custom-house official, who required Tom to sign and seal a declaration upon oath that he had no cargo on board, and not more coal than we absolutely required for our own consumption.

About eleven o'clock we put on our mackintoshes and thick boots, and, accompanied by an interpreter, who (together with several washerwomen) had suddenly made his appearance on board, rowed ashore, pushing our way through crowds of boats laden with fruit and vegetables. The landing-place was close to the market, at some broken-down steps, and was crowded with chattering negroes, of

every shade of colour. The quays seemed covered with piles of fruit and vegetables, discharged from the boats, the principal produce being sugar-cane, bananas, and oranges. Each side street that we came to was a little river, which had to be crossed, or rather forded, after paddling through the mud in the main thoroughfare.

Our first visit was to the post-office—'no letters'—then to the British Consulate—'no letters'—and finally to the Legation, but there was nobody at home there; so we set off for the Hôtel des Etrangers, to breakfast. Our way lay through the straggling suburbs of the city for about two miles, and as we drove along we could see and admire, despite the heavy rain, the magnificent groves of palm-trees, and the brilliancy and beauty of the tropical vegetation in the various private and public gardens that we passed.

After breakfast we paid a visit to some of the shops in the Rua do Ouvidor, for the sale of imitations of flowers, made from the undyed feathers of birds, and a large number of the more expensive varieties of ordinary artificial flowers, each petal consisting of the entire throat or breast of a humming bird, and the leaves are made from the wings of beetles. They are very rare and beautiful, their manufacture being quite a *spécialité* of this city.

Saturday, August 19th.—Though far from brilliant, the weather improved, and we were able to enjoy occasional glimpses of the beautiful scenery around us.

Mr. Gough and Mr. O'Connor breakfasted with us on board, and we afterwards proceeded in a 'bond' to the Botanical Gardens, about seven miles out of the city. These 'bonds,' which are a great institution here, are large carriages, either open or closed, drawn sometimes by one, sometimes by two, sometimes by three mules. They go at a great pace, and run very smoothly. Ordinary carriages are dear; and as tramways have been laid down in

almost every street and road, driving is a rather difficult affair. On our road we passed several delightful-looking private gardens. The railings were completely covered, some with white stephanotis and scarlet lapageria, others with a beautiful orange-coloured creeper and lilac bougainvillæa, or passion-flowers of many colours and variety. Inside we could see large trees with green and yellow stripes, croton-oil plants, spotted and veined caladiums, and dracænas, the whole being shaded by orange-trees.

Along the edge of Botafogo Bay there is a delightful drive, beneath a splendid avenue of imperial palms, extending to the gates of the Botanical Gardens. Each specimen rises straight up like the column of an Egyptian temple, and is crowned with a feathery tuft of large shiny dark green leaves, some thirty feet in length. The clumps of bamboos, too, were very fine, and nearly all the trees seemed to be full of curious orchids and parasites of every sort and kind.

We had an agreeable drive back in the cool evening to dinner at the Hôtel de l'Europe. We afterwards went to a pleasant little reception, where we enjoyed the splendid singing of some young Brazilian ladies, and the subsequent row off to the yacht, in the moonlight, was not the least delightful part of the programme.

Sunday, August 20th.—At last a really fine day. We could now, for the first time, thoroughly appreciate the beauties of the noble bay of Nictheroy, though the distant Organ mountains were still hidden from our view. In the morning, we went to church on board H.M.S. 'Volage,' afterwards rowing across the bay to Icaraky, where we took the tramway to Santa Rosa. On our way we again passed many charming villas and gardens, similar to those we had admired yesterday, while the glorious and ever-attractive tropical vegetation abounded everywhere. In spite of the great heat, the children seemed untiring in

the pursuit of butterflies, of which they succeeded in catching many beautiful specimens.

Monday, August 21st.—After an early breakfast, we started off to have a look at the market. The greatest bustle and animation prevailed, and there were people and things to see and observe in endless variety. The fish-market was full of finny monsters of the deep, all new and strange to us, whose odd Brazilian names would convey to a stranger but little idea of the fish themselves. There was an enormous rockfish, weighing about 300 pounds, with hideous face and shiny back and fins; there were large ray, and skate, and cuttle fish—the *pieuvre* of Victor Hugo's '*Travailleurs de la Mer*'—besides baskets full of the large prawns for which the coast is famous, eight or ten inches long, and with antennæ of twelve or fourteen inches in length. They make up in size for want of quality, for they are insipid and tasteless, though, being tender, they make excellent curry. The oysters, on the other hand, are particularly small, but of the most delicious flavour. They are brought from a park, higher up the bay, where, as I have said, they grow on posts and the branches of the mangrove-tree, which hang down into the water. We also saw a large quantity of fine mackerel, a good many turtle and porpoises, and a few hammer-headed sharks. The latter are very curious creatures, not unlike an ordinary shark, but with a remarkable hammer-shaped projection on either side of their noses for which it is difficult to imagine a use.

In the fruit market were many familiar bright-coloured fruits; for it is now the depth of winter at Rio, and the various kinds that we saw were all such as would bear transport to England. Fat, jet-black negresses, wearing turbans on their heads, strings of coloured beads on their necks and arms, and single long white garments, which appeared to be continually slipping off their shoulders,

here presided over brilliant-looking heaps of oranges, bananas, pineapples, passion-fruit, tomatoes, apples, pears, capsicums and peppers, sugar-cane, cabbage-palms, cherimoyas, and bread-fruit.

In another part of the market all sorts of live birds were for sale, with a few live beasts, such as deer, monkeys, pigs, guinea-pigs in profusion, rats, cats, dogs, marmosets, and a dear little lion-monkey, very small and rather red, with a beautiful head and mane, who roared exactly like a real lion in miniature. We saw also cages full of small flamingoes, snipe of various kinds, and a great many birds of smaller size, with feathers of all shades of blue, red, and green, and metallic hues of brilliant lustre, besides parrots, macaws, cockatoos innumerable, and torchas, on stands. The torcha is a bright-coloured black and yellow bird, about as big as a starling, which puts its little head on one side and takes flies from one's fingers in the prettiest and most enticing manner. Unfortunately, it is impossible to introduce it into England, as it cannot stand the change of climate. The other birds included guinea-fowls, ducks, cocks and hens, pigeons, doves, quails, &c., and many other varieties less familiar or quite unknown to us. Altogether the visit was an extremely interesting one, and well repaid us for our early rising.

At eleven o'clock we started for the Petropolis steamer, which took us alongside a wooden pier, from the end of which the train started, and we were soon wending our way through sugar and coffee plantations, formed in the midst of the forest of palms and other tropical trees. An Englishman has made a large clearing here, and has established a fine farm, which he hopes to work successfully by means of immigrant labour.

After a journey of twenty minutes in the train, we reached the station, at the foot of a hill, where we found several four-mule carriages awaiting our arrival. The

drive up from the station to the town, over a pass in the Organ mountains, was superb. At each turn of the road we had an ever-varying view of the city of Rio and its magnificent bay. And then the banks of this tropical high road! From out a mass of rich verdure grew lovely scarlet begonias and spotted caladiums, shaded by graceful tree-ferns and overhung by trees full of exquisite parasites and orchids. Among these, the most conspicuous, after the palms, are the tall thin-stemmed sloth-trees, so called from their being a favourite resort of the sloth, who with great difficulty crawls up into one of them, remains there until he has demolished every leaf, and then passes on to the next tree.

The pace of the mules, up the steep incline, under a broiling sun, was really wonderful. Half-way up we stopped to change, at a buvette, where we procured some excellent Brazilian coffee, of fine but exceedingly bitter flavour. Our next halt, midway between the buvette and the top of the hill, was at a spring of clear sparkling water, where we had an opportunity of collecting some ferns and flowers; and on reaching the summit we stopped once more, to enjoy the fine view over the Pass and the bay of Nictheroy. We then descended towards Petropolis, which lies in the hollow of the hills, with a river flowing through the centre of its broad streets, on either side of which are villas and avenues of noble trees. Altogether it reminded me of Bagnères-de-Luchon, in the Pyrenees, though the general effect is unfortunately marred by the gay and rather too fantastic painting of some of the houses.

Tuesday, August 22nd.—We were called at half-past five, and started on horseback by seven o'clock for the Virgin Forest, about six miles from Petropolis. After leaving the town and its suburbs, we pursued our way by rough winding paths, across which huge moths and

butterflies flitted, and humming-birds buzzed in the almond-trees. After a ride of an hour and a-half, we entered the silence and gloom of a vast forest. On every side extended a tangled mass of wild, luxuriant vegetation: giant-palms, and tree-ferns, and parasites are to be seen in all directions, growing wherever they can find root-hold. Sometimes they kill the tree which they favour with their attentions—one creeper, in particular, being called ‘Mata-pao’ or ‘Kill-tree;’ but, as a rule, they seem to get on very well together, and to depend mutually upon one another for nourishment and support. The most striking of these creepers is, perhaps, the liane, whose tendrils grow straight downwards to the ground, twisting themselves together in knots and bundles. Occasionally one sees, suspended from a tree, at a height of some fifty feet, a large lump of moss, from which scarlet orchids are growing; looking like an enormous hanging flower-basket. All colours in Brazil, whether of birds, insects, or flowers, are brilliant in the extreme. Blue, violet, orange, scarlet, and yellow are found in the richest profusion, and no pale or faint tints are to be seen. Even white seems purer, clearer, and deeper than the white of other countries.

We had a long wet walk in the forest; the mosses and ferns being kept moist and green by the innumerable little streams of water which abound everywhere. Owing to the thickness of the surrounding jungle, it was impossible to stray from our very narrow path, notwithstanding the attractions of humming-birds, butterflies, and flowers. At last we came to an opening in the wood, whence we had a splendid view seawards, and where it was decided to turn round and retrace our steps through the forest. After walking some distance we found our horses waiting, and after a hot but pleasant ride reached Petropolis by twelve o’clock. In the afternoon we drove past the Emperor’s

palace—an Italian villa, standing in the middle of a large garden—the new church, and the houses of the principal inhabitants, most of which are shut up just now, as everybody is out of town, but it all looked very green and pleasant. It was interesting to see a curious breed of dogs, descended from the blood-hounds formerly used in hunting the poor Indians.

Wednesday, August 23rd.—At six o'clock we assembled all on the balcony of the hotel to wait for the coach, which arrived shortly afterwards.

The air felt fresh when we started, but before we had proceeded far we came into a thick, cold, wet fog, which, after the heat of the last few weeks, seemed to pierce us to the very marrow. Eight miles farther on the four frisky white mules were exchanged for five steady dun-coloured ones, which were in their turn replaced after a seven-mile stage by four nice bays, who took us along at a tremendous pace. The sun began by this time to penetrate the mist, and the surrounding country became visible. We found that we were following the course of the river, passing through an avenue of coral-trees, loaded with the most brilliant flowers and fruit imaginable, and full of parrots and fluttering birds of many hues.

We stopped at several small villages, and at about 11 a.m. reached Entre Rios, having changed mules seven times, and done the $59\frac{1}{2}$ miles in four hours and fifty minutes, including stoppages—pretty good work, especially as the heat during the latter portion of the journey had been as great as the cold was at the commencement. The term 'cold' must here be taken only in a relative sense, for the thermometer was never lower than 48° , though having been accustomed for a long while to 85° , we felt the change severely.

After a capital breakfast at the inn near the station, we got into the train and began a very hot dusty journey

over the Serra to Palmeiras, which place was reached at 4 p.m. We were met on our arrival by Dr. Gunning. The view from the windows of his house, which is situated on the very edge of a hill, over the mountains of the Serra, glowing with the light of the setting sun, was perfectly enchanting. A short stroll into the forest adjoining the house proved rich in treasures, for in a few minutes I had gathered twenty-six varieties of ferns, including gold and silver ferns, two creeping ferns, and many other kinds. The moon rose, and the fireflies flashed about among the palm-trees, as we sat in the verandah, while in several places on the distant hills we could see circles of bright flames, where the forest had been set on fire in order to make clearings.

We were up next morning in time to see the sun rise from behind the mountains, and as it gradually became warmer the humming-birds and butterflies came out and buzzed and flitted among the flowers in front of our windows. We had planned to devote the day to a visit to Barra, and it was, therefore, necessary to hurry to the station by eight o'clock to meet the train, where we stopped twenty minutes to breakfast. Our carriage was then shunted and hooked on to the other train, and we proceeded to the station of Santa Anna, where Mr. Faro met us with eight mules and horses, and a large old-fashioned carriage. After a couple of miles of a rough road we arrived at the gates of the Baron's grounds. Beneath the avenue of palm-trees, leading from the gates to the house, grew orange, lemon, and citron trees, trained as espaliers, while behind them again tall rose-bushes and pomegranates showed their bright faces.

Santa Anna is one of the largest coffee fazendas in this part of Brazil. The house occupies three sides of a square, in the middle of which heaps of coffee were spread out to dry in the sun. The centre building is the

dwelling-house, with a narrow strip of garden, full of sweet-smelling flowers, in front of it; the right wing is occupied by the slaves' shops and warehouses, and by the

The Slave Village, Fazenda, Santa Anna. A.Y.B.

chapel; while the left wing contains the stables, domestic offices, and other slave-rooms.

By law, masters are bound to give their slaves one day's rest in every seven, and any work the slaves may choose to do on that day is paid for at the same rate as

free labour. But the day selected for this purpose is not necessarily Sunday; and on adjoining fazendas different days are invariably chosen, in order to prevent the slaves from meeting. Thursday (to-day) was Sunday on this estate, and we soon saw all the slaves mustering in holiday attire in the shade of one of the verandahs. They were first inspected, and then ranged in order, the children being placed in front, the young women next, then the old women, the old men, and finally the young men. In this order they marched into the corridor facing the chapel, to hear mass. The priest and his acolyte, in gorgeous robes, performed the usual service, and the slaves chanted the responses in alternate companies, so that sopranos, contraltos, tenors, and basses, contrasted in a striking and effective manner. The singing, indeed, was excellent, far better than in many churches at home. After the conclusion of the mass the master shook hands with everybody, exchanged good wishes with his slaves, and dismissed them.

After an elaborate breakfast, we started off to walk round the fazenda. Our first visit was to the little school-children, then to the hospital, in which there were happily but few patients, and next we inspected the new machinery, worked by water-power, for cleaning the coffee and preparing it for market. The harvest lasts from May to August. The best quality of coffee is picked before it is quite ripe, crushed to free it from the husk, and then dried in the sun, sometimes in heaps, and sometimes raked out flat, in order to gain the full benefit of the heat. It is afterwards gathered up into baskets and carefully picked over, and this, being very light work, is generally performed by young married women with babies.

Cassava is an important article of food here, and it was interesting to watch the various processes by which

it is turned into flour, tapioca, or starch. As it is largely exported, there seems no reason why it should not be introduced into India, for the ease with which it is cultivated and propagated, the extremes of temperature it will bear, and the abundance of its crop, all tend to recommend it. We went on to look at the maize being shelled, crushed, and ground into coarse or fine flour, for cakes and bread, and the process of crushing the sugar-cane, turning its juice into sugar and rum, and its refuse into potash. All the food manufactured here is used on the estate; coffee alone is exported. Returning to the house, we stepped into the carriage on our way to Barra by rail *en route* to Rio de Janeiro. After passing through several long tunnels at the top of the Serra, the line drops down to Palmeiras, after which the descent became very picturesque, as we passed, by steep inclines, through virgin forests full of creepers, ferns, flowers, and orchids. The sunset was magnificent, and the subsequent coolness of the atmosphere most grateful. Leaving the Emperor's palace of São Christovão behind, we entered Rio from a fresh side.

Monday, August 28th.—We have all been so much interested in the advertisements we read in the daily papers of slaves to be sold or hired, that arrangements were made with a Brazilian gentleman for some of our party to have an opportunity of seeing the way in which these transactions are carried on. No Englishman is allowed to hold slaves here, and it is part of the business of the Legation to see that this law is strictly enforced. The secrets of their trade are accordingly jealously guarded by the natives, especially from the English. The gentlemen had therefore to disguise themselves as much as possible, one pretending to be a rich Yankee, who had purchased large estates between Santos and San Paulo, which he had determined to work with slave instead of

coolie labour. They were taken to a small shop in the city, and, after some delay, were conducted to a room upstairs, where they waited a quarter of an hour. Twenty-two men and eleven women and children were then brought in for inspection. They declared themselves suitable for a variety of occupations, in-door and out, and all appeared to look anxiously at their possible purchaser, with a view to ascertain what they had to hope for in the future. One couple in particular, a brother and sister, about fourteen and fifteen years old respectively, were most anxious not to be separated, but to be sold together; and the tiny children seemed quite frightened at being spoken to or touched by the white men. Eight men and five women having been specially selected as fit subjects for further consideration, the visit terminated.

The daily Brazilian papers are full of advertisements of slaves for sale, and descriptions of men, pigs, children, cows, pianos, women, houses, &c., to be disposed of, are inserted in the most indiscriminate manner; e.g.—

VENDE-SE uma escrava, de 22 annos, boa figura, lava, engomma e cose bem; informa-se na rua de S. Pedro n. 97.

VENDE-SE ou aluga-se um rico piano forte do autor Erard, de 8 cordas, por 280\$, garantido; na rua da Quitanda n. 42, 2 andar.

VENDE-SE, por 1,500\$ um escravo de 20 annos, para serviço de padaria; na rua da Princesa dos Cajueiros n. 97.

VENDE-SE uma machina Singer, para qualquer costura, trabalha perfeitamente, por preço muito commodo; trata-se na rua do Sabão n. 95.

FOR SALE.—A female slave, 22 years of age, a good figure, washes, irons, and sews well; for particulars apply at No. 97 rua de S. Pedro.

FOR SALE, OR TO BE LET ON Hire.—A splendid triehord piano-forte by Erard, for \$280, guaranteed; apply at rua da Quitanda No. 42, 2nd floor.

TO BE SOLD FOR \$1,500.—A male slave 20 years of age, fit for a baker's establishment; apply at rua da Princesa dos Cajueiros No. 97.

FOR SALE.—On very reasonable terms, a Singer's sewing-machine, adapted for any description of work: works splendidly; apply at No. 95 rua do Sabão.

We had many visitors to breakfast to-day, and it was nearly two o'clock before we could set off for the shore *en route* to Tijuca. We drove nearly as far as the Botanical Gardens, where it had been arranged that horses should

meet us ; but our party was so large that some little difficulty occurred at this point in making a fair start. It was therefore late before we started, the clouds were beginning to creep down the sides of the hills, and it had grown very dusk by the time we reached the Chinisi river. Soon afterwards the rain began to come down in such tropical torrents, that our thin summer clothing was soaked through and through long before we reached the Tijuca. At last, to our great joy, we saw ahead of us large plantations of bananas, and then some gas-lights, which exist even in this remote locality, and we reached the door of White's Hotel, miserable, drenched objects, looking forward to a complete change of clothing. Unfortunately the cart with our luggage had not arrived, so it was in clothes borrowed from kind friends that we at last sat down, a party of about forty, to a sort of *table-d'hôte* dinner, and it continued to pour with rain during the whole evening, only clearing up just at bed-time.

Tuesday, August 29th.—After all the fine weather we have had lately, it was provoking to find, on getting up this morning, that the rain still came steadily down. Daylight enabled us to see what a quaint-looking place this hotel is. It consists of a series of low wooden detached buildings, mostly one story high, with verandahs on both sides, built round a long courtyard, in the centre of which are a garden and some large trees. The views from the walks around the hotel and in the forest above are beautiful, as, indeed, they are from every eminence in the neighbourhood of Rio.

During the morning, the weather cleared sufficiently for us to go down to 'The Boulders,' huge masses of rock, either of the glacial period, or else thrown out from some mighty volcano into the valley beneath. Here they form great caverns and caves, overhung with creepers, and so blocked up at the entrance that it is difficult to find the way into them. The effect of the alternate darkness and

light, amid twisted creepers, some like gigantic snakes, others neatly coiled in true man-of-war fashion, is very striking and fantastic. Every crevice is full of ferns and orchids and curious plants, while moths and butterflies flit about in every direction. Imagine, if you can, scarlet butterflies gaily spotted, yellow butterflies with orange edgings, butterflies with dark blue velvety-looking upper wings, the under surface studded with bright owl-like peacock eyes, grey Atlas moths, and, crowning beauty of all, metallic blue butterflies, which are positively dazzling, even when seen in a shop, dead. Most of them measure from two to ten inches in length from wing to wing, and many others flit about, equally remarkable for their beauty, though not so large. Swallow-tails, of various colours, with tails almost as long, in proportion to their bodies, as those of their feathered namesakes; god-parents and 'eighty-eights,' with the figures 88 plainly marked on the reverse side of their rich blue or crimson wings. In fact, if nature could by any possibility be gaudy, one might almost say that she is so in this part of the world.

From 'The Boulders' we went down a kind of natural staircase in the rock to the small cascade, which, owing to the recent rains, appeared to the best advantage, the black rocks and thick vegetation forming a fine background to the sheet of flowing white water and foam. Our way lay first through some castor-oil plantations, and then along the side of a stream, fringed with rare ferns, scarlet begonias, and grey ageratum. We returned to the hotel, too late for the general luncheon, and, after a short rest, went out for a gallop in the direction of the peak of Tijuca, past the large waterfall, the 'Ladies' Mile,' and 'Grey's View.' The forest is Government property; the roads are therefore excellent, and are in many places planted with flowers and shrubs, rare even here. It seems a waste of money, however; for there is hardly any one to make use of the wide roads, and the

forest would appear quite as beautiful in its pristine luxuriance.

Wednesday, August 30th.—Once more a wet morning ; but as it cleared towards noon, we went up to Pedro Bonito. The ride was pleasant enough at first, but as we mounted higher and higher, we got into the clouds and lost the view. Finally, there seemed nothing for it but to halt near the top, under a grove of orange-trees, lunch in the pouring rain, and return without having reached the summit.

Friday, September 1st.—At three o'clock this morning, when I awoke, I saw at last a bright, clear sky, and at five, finding that there was every prospect of a beautiful sunrise, we sent for horses, and set off for the peak of Tijuca. Step by step we climbed, first through the grounds of the hotel, then through the forest, till we reached 'The Bamboos,' a favourite halting-place by the side of a stream, near which grow, in waving tufts, the graceful trees which lend their name to the spot. It was very beautiful in the hill-side forest, with a new prospect opening out at every step, and set in an ever-varying natural framework of foliage and flowers. There was not sufficient time to linger, however, as we would fain have done, in the cool and shady paths, occasionally illumined by the bright rays of the sun, shining through the foliage of noble palms, the fronds of tree-ferns, and the spiral stems of many-coloured creepers.

Before reaching the top of the peak, there are twenty-nine wooden and ninety-six stone steps to be ascended, at the foot of which we tied our horses. An iron chain is hung by the side to assist you, without which it would be rather giddy work, for the steps are steep, and there is a sheer precipice on one side of them. Arrived at the top, the scene was glorious ; on every side mountains beyond mountains stretch far away into the distance, and one can see as far north as Cape Frio, and southwards as far as Rio Grande do Sul, while beneath lies the bay of Rio,

with its innumerable islands, islets, and indentations. All too soon we had to scramble down again, and mount our horses for a hurried return to the hotel, there being barely time for lunch and a scramble to the yacht.

Monday, September 4th.—We were all up very early this morning, superintending the preparations for our eldest boy's departure for England. The yacht had been gaily dressed with flags, in honour of the anniversary of the Emperor's wedding-day; but it must be confessed that our own feelings were hardly in accordance with these external symbols of joy. After breakfast, we went ashore to the market, to get a couple of lion-monkeys, which had been kept for us, and which Tab was to take home with him to present to the Zoological Gardens.

In the evening we were again on shore for a ball at the Casino, the grand public room in Rio, to which we had been invited some days ago. It seemed a splendid place, beautifully decorated in white and gold and crimson, with frescoes and pictures let into the walls, and surrounded by galleries. It is capable of containing fifteen hundred persons, and I believe that there were even more than that number present on the occasion of the ball given to the Duke of Edinburgh some years ago. There were not a great many ladies present, but amongst those we saw some were extremely pretty, and all were dressed in the latest fashions from Paris.

The floor was excellent, but the band made rather too much noise, and the dancing was different, both in style and arrangement, from what we are accustomed to at home.

The time had now come when we had to say farewell to the many kind friends whom we have met here, and who have made life so pleasant to us during the last three weeks, in order that we might return to the yacht, to complete our preparation for an early start.

CHAPTER V.

THE RIVER PLATE.

*Blue, glossy green, and velvet black,
They coiled and swam; and every track
Was a flash of golden fire.*

Tuesday, September 5th.—We got under way at 6 a.m., and soon bade adieu to Rio. It was a dull wet morning, and we could not see much of the beauties we were leaving behind us. The peak of Tijuca and the summit of the Corcovado were scarcely visible, and the Sugarloaf and Gavia looked cold and grey in the early mist. It was not long before we were rolling on the bar, and then tumbling about in the rough sea outside. At night we saw some large bonitos playing about the bows of the yacht. We climbed into the bows of the vessel to watch them, as they gambolled and frisked about, brightly illumined by the phosphorescence of the water, now swimming together steadily in pairs or fours, now starting in sudden pursuit of one of their number, who would make an independent rush forward in advance of his companions.

Saturday, September 9th.—The last three days have been showery, with squalls which have freshened to a gale, and we are now scudding along, under all storm canvas, followed by crowds of cape-pigeons and cape-hens, and a few albatrosses. Towards this evening, however, the wind

fell light, and we got up steam, in order to be prepared for any emergency, as a calm is frequently succeeded on this coast by a *pampero*, and we are now approaching a lee shore.

Sunday, September 10th.—Tom has been on deck nearly all night. The shore is very low and difficult to distinguish, and the lights are badly kept. If the lighthouse keeper happens to have plenty of oil, and is not out shooting or fishing, he lights his lamp; otherwise, he omits to perform this rather important part of his duties. The lighthouses can therefore hardly be said to be of much use. About 5 a.m. Kindred woke Tom, calling out, 'Land to leeward, sir!' and then rushed up on deck again. The first glimmer of dawn had enabled him to see that we were running straight on to the low sandy shore, about three miles off, a very strong current having set us ten miles out of our course. The yacht's head was accordingly at once put round, and steaming seaward we soon left all danger behind. The sun rose brilliantly, and the weather during the day was very fine. In the night we made the light on Flores, burning brightly, and before morning those in the harbour of Monte Video.

Monday, September 11th.—After making the Flores light we proceeded slowly, and dropped our anchor in the outer roads of Monte Video at 4 a.m. At seven o'clock we got it up again, and by eight were anchored close to the shore.

Monte Video, as seen from the water, is not an imposing-looking place. On the opposite side of the entrance to the harbour rises a hill, called the Cerro, 450 feet high, from which the town derives its name, and further inland, on the town side, is another eminence, 200 feet high, called the Cerrito. With these exceptions the surrounding country looks perfectly flat, without even a tree to break the monotony.

Soon after breakfast we went ashore—in more senses of the word than one; for they have begun to build a mole for the protection of small vessels, which, in its unfinished state, is not yet visible above the water. The consequence was that, at a distance of about half a mile from the landing-steps, we rowed straight on to the submerged stonework, but fortunately got off again very quickly, without having sustained any damage. On landing, we found ourselves opposite the Custom House, a fine building, with which we afterwards made a closer acquaintance.

There is a large and very good hotel here, l'Hôtel Oriental. It is a handsome building outside, and the interior is full of marble courts, stone corridors, and lofty rooms, deliciously cool in the hottest weather. The streets are wide and handsome, though badly paved, and so full of holes that it is a wonder how the springs of a carriage can last a week. The houses seem built chiefly in the Italian style of architecture, with fine stucco fronts, and in many cases marble floors and facings, while the courtyards, seen through the grilles, blazed with flowers. All the lower windows were strongly barred, a precaution by no means unnecessary against the effects of the revolutions, which are of such frequent occurrence in this country. To enable the inhabitants the better to enjoy the sea-breeze, the tops of the houses are all flat, which gives the town, from a distance, somewhat of an Eastern appearance. There are a great many Italian immigrants here, and most of the building and plastering work is done by them.

The Paseo del Molino is the best part of the town, where all the rich merchants reside in quintas, surrounded by pretty gardens. They are very fantastic in their ideas of architectural style, and appear to bestow their patronage impartially, not to say indiscriminately, upon Gothic cathedrals, Alhambra palaces, Swiss cottages, Italian

villas, and Turkish mosques. Except for this variety, the suburb has somewhat the appearance of the outskirts of many of the towns on the Riviera, with the same sub-tropical surroundings. These are, however, hard times on the River Plate, and more than half the quintas are deserted and falling into ruins. On our way back, by the Union Road, we met a great many of the native bullock-carts going home from market. These huge conveyances are covered with hides, and are drawn by teams of from two to twelve bullocks, yoked in pairs, and driven by a man on horseback, who carries a sharp-pointed goad, with which he prods the animals all round, at intervals. Dressed in a full white linen shirt and trousers, with his bright poncho and curious saddle gear, he forms no unimportant figure in the picturesque scene. In the large market-place there are hundreds of these carts, with their owners encamped around them.

Tuesday, September 12th.—The anchor was up, and we were already beginning to steam away when I came on deck this morning, just in time to see the first faint streaks of dawn appearing in the grey sky. The River Plate here is over a hundred miles wide, and its banks are very flat; so there was nothing to be seen, except the two little hills of Cerro and Cerrito and the town of Monte Video, fast vanishing in the distance. The channels are badly buoyed, and there are shoals and wrecks on all sides. The light-ships are simply old hulks, with no special marks by which to distinguish them; and as they themselves look exactly like wrecks, they are not of much assistance in the navigation, which is very confusing, and sometimes perilous. Once we very nearly ran aground, but discovered just in time that the vessel we were steering for with confidence was only a wreck, on a dangerous shoal, and that the light-ship itself was further ahead. The yacht was immediately put about, and we just skirted the bank in turning.

The weather improved during the day, and a fine sunset was followed by a clear starlight night. At 10.30 p.m. we dropped our anchor outside all the other vessels in the roads at Buenos Ayres, eight miles from the shore. The light-ship only carried an ordinary riding light, like any other vessel, so that it was almost impossible, unless you knew the port very well, to go in closer to the land at night.

Wednesday, September 13th.—Daylight did not enable us to distinguish the town, for the river here is wide and the banks are low, and we were lying a long way from the shore, outside a great many fine-looking ships, at anchor in the roads. About nine o'clock a German captain, in a large whale-boat, came alongside and told us we were nearly eight miles from Buenos Ayres. Tom arranged with him to take us ashore; and accordingly we soon started. The water was smooth and there was a nice breeze, and we sailed gallantly along for about two hours, until we reached the town. After anchoring, we transhipped ourselves into a small boat, in which we were rowed to some steps, at the end of the long rickety mole, where we landed.

Our first business was to secure the services of a pilot, to take us up to Rosario. The best man on the river was sent for; but when he came he did not recommend our undertaking the voyage, as the water is very low at present, and we might get stuck on a sandbank, and be detained for some days, although no further harm would be likely to occur to us. We decided, therefore, as our time is precious, to give up the idea of making the expedition in the yacht, and to go in the ordinary river-boat instead.

Under the guidance of some gentlemen, we then went to the Central Railway Station to send off some telegrams, and thence to the River Plate Bank. The treasury

contains 600,000*l.* in British sovereigns, locked up in three strong safes, besides paper-money and securities to the amount of 2,000,000*l.* It was the Rosario branch of this bank which was recently robbed of 15,000*l.* by an armed Government force; an unprecedented proceeding in the history of nations, and one that might have led to the interference of foreign powers.

There was time afterwards to go round and see something of the city, which, like many other South American towns, is built in square blocks, all the streets running exactly at right angles one to another. There is a fine plaza, or grand square, in which are situated the cathedral, theatre, &c., the centre being occupied by a garden, containing statues and fountains. The various banks, with their marble facings, Corinthian columns, and splendid halls, are magnificent buildings, and look more like palaces than places of business. Some of the private houses, too, seem very handsome. Outside they are all faced with marble, to a certain height from the ground, the interior, consisting of courtyard within courtyard, being rather like that of a Pompeian house.

We next went to the agricultural show, which, though not an imposing affair to our eyes, appeared really very creditable to those who had organised it. The horses and cattle looked small, but there were some good specimens of sheep—specially the *rombonellis* and *negrettis*, whose long fine wool was, however, only to be discovered by first turning aside a thick plaster of mud, beneath which it was concealed. We saw also some curious animals, natives of the country, such as vicuñas, llamas, bizcachas, and various kinds of deer, a very mixed lot of poultry and dogs, and two magnificent Persian cats. Another department of the show was allotted to the commercial products of the country, animal, vegetable, and mineral; the whole forming a very interesting collection.

Thursday, September 14th.—The pilot came on board at seven o'clock to take us in nearer the shore, but, after all, we found ourselves obliged to anchor again five miles off. No ship drawing more than ten feet can get inside the sand-banks, which makes it a wretched place to lie in, especially as the weather at this time of the year is very uncertain. You may go ashore from your ship on a fine clear morning, and before you return a gale may have sprung up, accompanied by a frightful sea. Open boats are therefore quite unsafe, a state of things which has given rise to the existence of a class of fine boats, specially built for the service, which attend all the ships lying in the roads. They are half-decked, will sail in any weather, and can be easily managed by two men.

About ten o'clock we went ashore again in the whale-boat, and made the best of our way to a warehouse to look at some ponchos, which are the speciality of this part of South America. Everybody wears one, from the beggar to the highest official. The best kind of ponchos are very expensive, being made from a particular part of the finest hair of the vicuña, hand-woven by women, in the province of Catamarca. The genuine article is difficult to get, even here. In the shops the price usually varies from 30% to 80% ; but we were shown some at a rather lower price—from 20% to 60% each. They are soft as silk, perfectly waterproof, and will wear, it is said, for ever. We met a fine-looking man in one of beautiful quality yesterday. He told us that it originally cost 30% in Catamarca, twenty years ago, and that he gave 20% for it, second-hand, ten years ago ; and, with the exception of a few slight tears, it is now as good as ever. Before we came here, we were strongly advised, in case we should happen to go on a rough expedition up country, not to be tempted to take with us any *good* ponchos, as the Gauchos, or half-bred Indians of the Pampas, who are great connoisseurs of these

articles, and can distinguish their quality at a glance, would not hesitate to cut our throats in order to obtain possession of them.

The material of which they are made is of the closest texture, and as the hair has never been dressed or dyed it retains all its natural oil and original colour, the latter varying from a very pretty yellow fawn to a pale cream-colour. The majority of the ponchos worn here are, however, made at Manchester, of a cheap and inferior material. They look exactly like the real thing at first sight, but are neither so light, nor so warm, nor do they wear at all well. Occasionally they are made of silk, but more often of bright-coloured wool. In shape a poncho is simply a square shawl with a hole in the middle for the head of the wearer. On horseback the appearance is particularly picturesque, and it forms also a convenient cloak, which comes well over the saddle, before and behind, and leaves the arms, though covered, perfectly free.

The natives, as a rule, wear a second poncho, generally of a different colour, tucked into the waistband of their long full linen drawers (*calzoncillos*), so as to make a pair of short baggy over-trousers. A poor man is content with a shirt, drawers, and two ponchos. A rich man has many rows of fringe and frills of lace at the bottom of his *calzoncillos*, and wears a short coat, with silver buttons, and a gorgeous silver belt, covered with dollars. His horse-fittings and massive stirrups (to say nothing of his enormous spurs) will be of solid silver, and his arms inlaid with the same metal. He will sometimes give as much as from 10% to 20% for a pair of stirrups alone, and the rest of his dress and equipment is proportionately expensive. The cost of the silver articles is little more than the value of the metal itself, which is of very pure quality, and is only roughly worked by the Indians or Gauchos. But as Manchester provides the ponchos, so does Birmingham

the saddlery and fittings, especially those in use in the neighbourhood of towns.

After inspecting the ponchos, we breakfasted with some friends, and about noon started in the train for Campana. The line passes at first through the streets of Buenos Ayres, and thence into the open country, beautifully green, and undulating like the waves of the sea. Near the town and the suburb of Belgrano are a great many peach-tree plantations, the fruit of which is used for fattening pigs while the wood serves for roasting them. There is also some scrubby brushwood, and a few large native trees; but these are soon left behind, and are succeeded by far-spreading rich pasture land, and occasional lagunes.

We saw for the first time the holes of the bizcachas, or prairie-dogs, outside which the little prairie-owls keep guard. There appeared to be always one, and generally two, of these birds, standing, like sentinels, at the entrance to each hole, with their wise-looking heads on one side, pictures of prudence and watchfulness. The bird and the beast are great friends, and are seldom to be found apart. We also passed several enormous flocks of sheep and herds of cattle, most of them quite untended, though some were being driven by men on horseback. There were quantities of plovers, and a great many partridges, of two kinds, large and small, and the numerous lagunes were covered with and surrounded by water-fowl of all kinds—wild swans and ducks, snipe, white storks, grey herons, black cormorants, and scarlet flamingoes, the last-named standing at the edge of the water, catching fish, and occasionally diving below the surface. On the very top of some of the telegraph-posts were the nests of the oven-bird, looking like carved round blocks of wood, placed there for ornament. These nests are made of mud, and

are perfectly spherical in form, the interior being divided into two quite distinct chambers.

Campana was reached by four o'clock, the train running straight on to the pier, alongside of which the two vessels were lying, with steam up. Passengers, baggage, and freight were immediately transferred from the train to the boats; and we soon found ourselves steaming along in the 'Uruguay,' between the willow-hung banks of the broad Parana. The country, though otherwise flat and uninteresting, looks very pretty just now, in its new spring coat of bright green.

We passed several small towns, amongst others, San Pedro and San Nicholas, which are quite important-looking places, with a good deal of shipping.

Just before arriving at each stopping-place, we had a race with the 'Proveedor,' and whenever she became visible at a bend in the river, half a ton more coal was immediately heaped on to our fires by the captain's order—a piece of reckless extravagance, for, do what they would, they could not make us gain five minutes. The competition is, however, very fierce, and I suppose the two companies will not be satisfied until they have ruined one another; whereas, if each would run a steamer on alternate days, they and the public would be equally benefited. The fares are exceedingly reasonable, being less than 3*l.* for the whole journey from Buenos Ayres to Rosario, including all charges.

Friday, September 15th.—A violent storm of thunder and lightning, apparently just above our heads, woke us at six o'clock this morning. Torrents of rain followed, and continued to fall until we dropped our anchor at Rosario, at 8.45 a.m., just as we were in the middle of breakfast, in our cozy little stern cabin. Half an hour later we landed, though the rain still came down in sheets; but the steamer was now alongside the pier, and close carriages

had been provided. A few minutes' drive through ill-paved streets brought us to the Hôtel Universel, a handsome, spacious building, with marble courtyards, full of trees, plants, and flowers, into which all the sitting-rooms open.

Rosario, like Buenos Ayres, is built in squares. The streets are generally well paved with black and white marble, but the roadways are composed of little round stones, and are full of holes and inequalities, so that, in crossing the road after heavy rain, one steps from the *trottoir* into a very slough of despond. The universal tramway runs down the centre of every street.

After luncheon we made a fresh start for Carcaraña by a special train, to which were attached two goods-vans, full of horses, and a carriage truck, containing a most comfortable American carriage, in shape not unlike a Victoria, only much lighter and with very high wheels. After a short journey through a rich, flat, grass country, we arrived at Roldan, the first colony of the Central Argentine Land Company. We saw many colonists, of every grade, from those still occupying the one-roomed wooden cottages, originally supplied by the Land Company, standing in the midst of ill-cultivated fields, to those who had built for themselves good houses in the town, or nice cottages, with pretty gardens, surrounded by well-tilled lands.

The drive ended at the mill belonging to a retired officer of the British army, who has settled here. We then returned to the train and proceeded to Carcaraña, the next station on the line. Now, however, instead of the rich pasture lands and flourishing crops which we had hitherto seen on all sides, our road lay through a desolate-looking district, bearing too evident signs of the destructive power of the locust. People travelling with us tell us that, less than a week ago, the pasture here was as fresh and green as could be desired, and the various crops were

a foot high ; but that, in the short space of a few hours, the care and industry of the last ten months were rendered utterly vain and useless, and the poor colonists found their verdant fields converted into a barren waste by these rapacious insects.

Carcaraña may be called the Richmond—one might almost say the Brighton—of Rosario. It stands on a river, the Carcarañal, to the banks of which an omnibus runs twice a day from the railway-station, during the season, to take people to bathe. Near the station is also an excellent little hotel, containing a large dining-room and a few bedrooms, kept by two Frenchwomen ; and here the Rosarians come out by train to dine and enjoy the fresh air. It was quite dark by the time we arrived, so that we could not see much of the flourishing little colony which has been formed here. Yesterday there was a grand wedding-party near here, the complete success of which was, we were told, somewhat marred by the fact, that for six hours, in the very middle of the day, it became absolutely necessary to light candles, owing to the dense clouds of locusts, about a league in extent, by which the air was darkened. Trains are even stopped by these insects occasionally ; for they appear to like a hard road, and when they get on the line their bodies make the rails so greasy that the wheels of the engines will not bite. Moreover, they completely obscure the lights and signals, so that the men are afraid to proceed. The only remedy, therefore, is to go very slowly, preceded by a truck-load of sand, which is scattered freely over the rails in front of the engine. Horses will not always face a cloud of locusts, even to get to their stables, but turn round and stand doggedly still, until it has passed.

After dinner we once more stepped into our special train, in which we arrived at Rosario at about half-past nine o'clock, thoroughly tired out.

CHAPTER VI.

LIFE ON THE PAMPAS.

*There's tempest in yon horned moon
And lightning in yon cloud ;
But hark the music, mariners !
The wind is piping loud.*

Saturday, September 16th.—Waking at half-past five, we busied ourselves until nine o'clock, when we again started in a special train for Carcaraña. After a short stop at Roldan, it was reached two hours later, and breakfast was followed by a long ride through the Land Company's colony, and from thence to Candelaria, a purely Spanish settlement.

I freely confess that I had hardly believed all the stories they told me last night about the terrible doings of the locusts, and thought they must have been slightly exaggerated. It all seemed too dreadful to be true—as if one of the plagues of Egypt had been revived by the wand of an evil magician. In this somewhat incredulous mood I rashly said that, although I was very sorry to hear of the visit of these destructive creatures, as they *were* unfortunately here, I should like to see them. My wish was shortly to be gratified ; for, in the course of our ride, we saw in the distant sky what looked very much like a heavy purple thunder-cloud, but which the experienced pronounced to be a swarm of locusts. It seemed im-

possible; but as we proceeded they met us, first singly, and then in gradually increasing numbers, until each step became positively painful, owing to the smart blows we received from them on our heads, faces, and hands. We stopped for a time at Mr. Holt's large estancia, where, notwithstanding the general appearance of prosperity, the traces of the ravages of the locusts were only too visible. On remounting, to proceed on our journey, we found that the cloud had approached much nearer, the effect produced by its varying position being most extraordinary. As the locusts passed between us and the sun they completely obscured the light; a little later, with the sun's rays shining directly on their wings, they looked like a golden cloud, such as one sometimes sees in the transformation scene of a pantomime; and, at a greater distance, when viewed from the top of a slight eminence, they looked like a snow-storm, or a field of snow-white marguerites, which had suddenly taken to themselves wings. When on the ground, with their wings closed, they formed a close mass of little brown specks, completely hiding the ground and crops, both grass and grain. In riding over them, though not a quarter of their number could rise, for want of space in which to spread their wings, they formed such a dense cloud that we could see nothing else, and the horses strongly objected to face them. They got into one's hair and clothes, and gave one the creeps all over. I am sure I shall often dream of them for some time to come, and I have quite made up my mind that I never wish to see another locust as long as I live.

The land we passed through appeared to be well farmed. We spoke to several of the colonists, especially to one Italian family, living in a little mud rancho with a tile roof. They were all gathered together to witness the dying agonies of one of their best cows, perishing from the effects of the drought. The rest of the animals in the

corral looked, I am sorry to say, thin and miserable, and as if they intended soon to follow their companion's example. The poor people, nevertheless, seemed very cheery and contented, and hospitably gave us each a drink of some remarkably muddy water.

After a thirty-mile ride under a hot sun, we were not sorry to stop for a short time at Carcaraña. We reached Rosario late in the evening.

Sunday, September 17th.—A kind friend sent his carriage to take us to the English church. The service was well performed, and the singing of the choir excellent. We paid a visit to the Sunday-schools, and then drove to the quinta of Baron Alvear. The road lies through the town, past the race-course, crowded with Gauchos, getting up scratch races amongst themselves, and on, over undulating plains and water-courses, into the open country. Sometimes there was a track, sometimes none. In some places the pastures were luxuriantly green; in others the ground was carpeted with white, lilac, and scarlet verbena, just coming into bloom—for it is still early spring here. Here and there came a bare patch, completely cleared by the locusts, who had also stripped many of the fine timber trees in the garden of the quinta. On the gate-posts, at the entrance, were the nests of two oven-birds, like those we had already seen on the telegraph-posts, so exactly spherical as to look like ornaments. In one of the shrubberies a fine jaguar, shut up in a cage, looked very like a tiger. Though he had evidently just had his dinner, he was watching with greedy interest the proceedings of some natives in charge of a horse—an animal which he esteems a great delicacy, when procurable.

On our way across the camp we saw a great quantity of the seeds of the *Martynia proboscidea*, mouse-burrs as they call them,—devil's claws or toe-nails: they are curious-looking things. Frank Buckland has a theory—

and very likely a correct one—that they are created in this peculiar form for the express purpose of attaching themselves to the long tails of the wild horses that roam about the country in troops of hundreds. They carry them thousands of miles, and disseminate the seed wherever they go at large in search of food and water.

When we returned to Rosario we noticed a great crowd still on the race-course, and were just in time to see the finish of one race, ridden barebacked, and for a very short distance. All the races are short; and as the natives are always engaging in these little contests of speed, the horses get into the habit of extending themselves as soon as you put them out of a walk. But the least touch is sufficient to stop them immediately, and I never saw horses better broken than they are here. The most fearful bits are used for the purpose; but when once this is accomplished, the mere inclination of the body, or the slightest pressure of the finger upon the bridle, is sufficient to guide them. They will maintain, for almost any length of time, a quick canter—what they call here ‘a little gallop’—at the rate of three leagues (ten miles) an hour, without showing the slightest sign of fatigue. They don’t like being mounted, and always fidget a little then, but are quite quiet when once you are in the saddle. They evidently dislike standing still, unless you dismount and throw the rein on the ground, when they will remain stationary for hours.

Monday, September 18th.—At nine o’clock we proceeded to the station, and started for Tortugas. The journey over the now familiar line, past Roldan, Carcaraña, and Cañada de Gomez, was a very pleasant one. At Tortugas we left the train, and paid a visit to one of the overseers of the colony and his cheery little French wife, who, we found, had been expecting us all day on

Saturday. A few weeks ago this lady's sister was carried off by Indians, with some other women and children. After riding many leagues, she seized her opportunity, pushed the Indian who was carrying her off his horse, turned the animal's head round, and galloped back across the plain, hotly pursued, until within a mile or two of the colony, by the rest of the band. It was a plucky thing for a little bit of a woman to attempt with a great powerful savage, and she is deservedly looked upon in the village as quite a heroine.

The journey between Rosario and Cordova occupies twelve hours by the ordinary train; and as Frayle Muerto is exactly half-way between the two places, the trains going in either direction commence their journey at the same hours (6 a.m. and 6 p.m.), by which means the passengers meet each other here in time to breakfast and dine together. There is a fine bridge over the river near Frayle Muerto, but the place is principally celebrated as having been the site of the Henleyite colony, which caused disappointment to so many young men of family, who were induced to come out here from England and to go up country, with no other result than the loss of all their money. The scheme was supposed to be perfect in all its details, but proved upon a closer acquaintance to be utterly worthless. The iron church at Rosario is still standing, which the members of the expedition took up there, and we have also met some of the young men themselves at various times.

The train did not reach Cordova until 7.30 p.m., and it was therefore too late for us to see much of the approach to the city, but to-morrow we intend to do a good deal in that way. It is one of the oldest, and, at the same time, one of the most unhealthy, of the cities of South America, for it is built in the hollow of the surrounding hills, where no refreshing breezes can penetrate.

Travelling in Brazil is like passing through a vast hot-house, filled with gorgeous tropical vegetation and forms of insect life. In the neighbourhood of Monte Video you might imagine yourself in a perpetual greenhouse. Here it is like being in a vast garden, in which the greenest of turf, the brightest of bedding-out plants, and the most fragrant flowering shrubs abound. Each country, therefore, possesses its own particular beauty, equally attractive in its way.

Shortly after leaving Cordova we passed through an Indian village; but, except at this point, we did not meet many natives during our ride. One poor woman, however, whom we did unfortunately encounter, had a fall from her horse, owing to the animal being frightened at the umbrella I carried; yet my own horse had, after a very brief objection, quietly submitted to the introduction of this novelty into the equipment of his rider.

The view from the verandah of the hotel on the Caldeira, to the Sierras beyond, is very fine. It had become quite hot by this time, and I was much interested in seeing all our horses taken down to the water to bathe. They appeared to be perfectly familiar with the process; and, the river being shallow, they picked out all the nice holes between the boulders, where they could lie down and be completely covered by the water. Just as we were starting to return, black clouds gathered from all around; the lightning flashed, the thunder muttered, and big drops began to fall. But the storm was not of long duration, and we escaped the worst part of it, though we had ample evidence of its severity during our homeward ride, in the slippery ground, the washed-away paths, and the swollen ditches. We stopped half-way to see the drowning out of some poor little bizcachas from their holes. The water had been turned into their dwellings by means of trenches, and as the occupants endeavoured

to make their escape at the other end they were pounced upon by men and dogs; the prairie-owls meanwhile hovering disconsolately overhead. Two of the gentlemen of our party each managed to purchase a living bizcacha, which was then wrapped up in a handkerchief and conveyed home. When young they are pretty little creatures, and are easily tamed.

It was late when we reached Cordova; but I was anxious to visit the Observatory before our departure, as it is one of the best, though not by any means the largest, in the world. Professor Gould, the astronomer, is away just at present, but we were kindly received by Mrs. Gould, who conducted us over the building. They have a fine collection of various instruments and some wonderful photographs of the principal stars—Saturn, with his ring and eight moons, Jupiter, with his four moons, Venus, Mercury, &c. If we could have stayed longer we might have seen much more; but it was now quite dark, and we had only just time for a short visit to the observing room itself. Our ride down to the city in the dark would have been exceedingly risky if our horses had been less sure-footed, for the roads had been washed away in many places, but we reached the bottom of the Observatory hill in safety, and shortly afterwards arrived at the hotel.

After dinner we drove to the station, where we found all our own party assembled, and many more people, who had come to see us off. I was given the Chilian bit used for the horse I rode to-day, as a remembrance of my visit. It is a most formidable-looking instrument of torture, and one which I am sure my dear little steed did not in the least require; but I suppose the fact of having once felt it, when being broken in, is sufficient for a lifetime, for the horses here have certainly the very lightest mouths I ever met with. A gift of a young puma, or small lion,

was also waiting for me. It is about four months old, and very tame.

The train started at 8.30 p.m. and took an hour to reach Rio Segundo. At 4.30 a.m. we found ourselves at Cañada de Gomez, dressing and packing in the cold and dark ; but it was soon done, and a cup of hot coffee in the refreshment-room afterwards made us feel quite comfortable.

Then we all separated : Captain Dunlop to join his ship ; Tom to complete his report on the colonies of the Central Argentine Land Company ; while the rest of the party awaited the arrival of the waggonette which was to take us to the estancia of Las Rosas.

Wednesday, September 20th.—At 6.30 a.m. the waggonette arrived, drawn by a pair of active little well-bred horses, both of whom had been raced in their day. There were but a few leagues of cultivated ground to be passed before we reached the broad, undulating, solitary Pampas, where for some time the only visible signs of life were to be found in the Teru-tero birds (a sort of plover), who shrieked discordantly as we disturbed their repose ; the partridges, large and small, put up by the retriever who accompanied us ; some prairie fowls ; a great many hawks, of all sizes ; and the pretty little wydah-birds, with their two immense tail feathers, four times the length of their bodies. The first glimpse of the far-spreading prairie was most striking in all its variations of colour. The true shade of the Pampas grass, when long, is a light dusty green ; when short it is a bright fresh green. But it frequently happens that, owing to the numerous prairie-fires, either accidental or intentional, nothing is to be seen but a vast expanse of black charred ground, here and there relieved by a few patches of vivid green, where the grass is once more springing up under the influence of the rain.

The road, or rather track, was in a bad condition,

owing to the recent wet weather, and on each side of the five *cañadas*, or small rivers, which we had to ford, there were deep morasses, through which we had to struggle as best we could, with the mud up to our axletrees.

In the course of the journey we passed a large estancia, the road to which was marked by the dead bodies and skeletons of the poor beasts who had perished in the late droughts. The next *cañada* that we crossed was choked up with the carcasses of the unfortunate creatures who had struggled thus far for a last drink, and had then not had sufficient strength left to extricate themselves from the water. Herds of miserable-looking, half-starved cattle were also to be seen, the cows very little larger than their calves, and all apparently covered with the same rough shaggy coats. The pasture is not fine enough in this part of the country to carry sheep, but deer are frequently met with.

A little later we again began to approach cultivated land, and a mile or two further brought us to a broad road, with high palings on either side, down which we drove, and through the yard, to the door of the estancia, the owner of which has the best horses in this part of the country, and has taken great pains to improve their breed, as well as that of the cattle and sheep, by importing thoroughbreds from England. Unlike the Arabs, neither natives nor settlers here think of riding mares, and it is considered quite a disgrace to do so. They are therefore either allowed to run wild in troops, or are used to trample out corn or to make mud for bricks. They are also frequently killed and boiled down, for the sake of their hides and tallow, the value of which does not amount to more than about 10s. per head. Large herds of them are met with at this time of the year on the Pampas, attended by a few horses, and accompanied by their foals.

The natives of these parts pass their lives in the saddle. Horses are used for almost every conceivable employment, from hunting and fishing to brick-making and butter-churning. Even the very beggars ride about on horseback. I have seen a photograph of one, with a police certificate of mendicancy hanging round his neck, taken from life for Sir Woodbine Parish. Every domestic servant has his or her own horse, as a matter of course. In fishing, the horse is ridden into the water as far as he can go, and the net or rod is then made use of by his rider. At Buenos Ayres I have seen the poor animals all but swimming to the shore, with heavy carts and loads, from the ships anchored in the inner roads; for the water is so shallow that only very small boats can go alongside the vessels, and the cargo is therefore transferred directly to the carts to save the trouble and expense of transhipment. In out-of-the-way places, on the Pampas, where no churns exist, butter is made by putting milk into a goat-skin bag, attached by a long lasso to the saddle of a peon, who is then set to gallop a certain number of miles, with the bag bumping and jumping along the ground after him.

About four o'clock the horses—much larger and better bred animals than those we have been riding lately—were brought round from the corral. We first took a canter round the cultivated ground, about 300 acres in extent, and in capital condition. Lucerne grows here splendidly, and can be cut seven times a year. As we left the yard, Mr. Nield's man asked if he would take the dogs. He replied in the negative; but I suppose he must have referred to the greyhounds only, for we were certainly accompanied on the present occasion by *eleven* dogs of various sorts and sizes, those left behind being shut up and kept without food, in anticipation of the stag-hunt to-morrow. We rode over the race-course, where the horses are trained,

and on to the partridge ground. The larger kind of these birds are extremely stupid, and are easily ridden down by a horseman, or caught in a noose. They rise three times, and after the third flight they are so exhausted and terrified that it is easy to dismount and catch them with the hand, as they lie panting on the long grass. Partridge-hunting is considered good sport. It is necessary to keep your eye constantly fixed upon the bird, and to watch where he settles, and then to gallop to the spot as hard as possible, leaving your horse to look after himself amid the long grass; and this manoeuvre has to be repeated until at last the unfortunate bird is overtaken and caught.

As we were riding along, the dogs found and killed a bizcacha, in a bank. Just as Mr. Elliott had pulled it out, and had laid it, dead, in the field, its little companion owl arrived, and appeared to be in the most dreadful state of mind. It shrieked and cried, as it hovered over us, and finally selected a small white fox terrier, who, I think, really had been principally concerned in the death, as the object of its vengeance, pouncing down upon his head, and giving him two or three good pecks, at the same time flapping its wings violently. The other dogs drove it off; but more than half an hour afterwards, while we were looking at some horses, nearly a mile from the spot, the plucky little owl returned to the charge, and again swooped down upon the same dog, with a dismal cry, and administered a vigorous peck to him. Altogether it was a striking and interesting proof of the attachment existing between these curious birds and beasts; the object of the owl in the present instance clearly being to revenge if possible the death of its friend.

On our return to the farm, we went all round the place, and found that everything was being made secure for the night.

CHAPTER VII.

MORE ABOUT THE ARGENTINE REPUBLIC.

*The twilight is sad and cloudy,
The wind blows wild and free,
And like the wings of sea-birds
Flash the white caps of the sea.*

Friday, September 22nd.—At 1 p.m. we started for the steamer, to return to Buenos Ayres. On our arrival alongside the 'Provedor,' I found that nearly all our Rosario friends had come down to the landing-place to see us off.

It was not long before we were steaming slowly astern of the 'Uruguay.' This boat is not so large nor so fast as the 'Uruguay,' though the difference in speed does not probably amount to more than fifteen minutes in the twenty-four hours. Her saloon and deck are not so good, but her sleeping-cabins are much larger and more comfortable. The Italian captains are equally agreeable on both steamers, the civility is the same, and the fares and food are precisely similar, so that there is not much left to influence one in the choice of vessels. There were no musicians on board to-night, and no temptation to sit up late, which was perhaps as well; one of the reasons for our going back this way being that we wished to have an opportunity of seeing the River Tigré, which we should reach in the early morning. On

the upward journey we had, to save time, embarked at Campaña, which is situated above that river.

Saturday, September 23rd.—At 4.30 a.m. the captain called me, being anxious that I should not miss any of the beauties of the Tigré. The sky was flushed with rosy clouds, the forerunners of one of the most beautiful sun-rises imaginable. The river itself is narrow and monotonous, the branches of the willow-trees on either bank almost sweeping the sides of the steamer. The centre channel is fairly deep; but we managed to run aground once, though we only drew nine feet, and in turning a sharp corner it was necessary to send a boat ashore with a rope, to pull the vessel's head round.

At half-past six we reached the port of Tigré, where we found many fine ships waiting for the tide, to go up the river. Some delay occurred while the passengers' luggage was being examined; but in about half an hour we were able to land and walk to the railway-station, through an avenue of shady trees, round the trunks of which the wistaria, now in full bloom, was climbing, and past several houses, whose pretty gardens were ablaze with all sorts of flowers.

For about an hour and a-half the line ran through a rich and fertile country, quite the garden of Buenos Ayres, until we arrived at the station where we were to alight. Here Mr. Coghlan met us and drove us to his house, which is charmingly situated in the midst of a grove of olive-trees, formerly surrounding the palace of the viceroys. After breakfast we walked to the tramway, and were conveyed by one of the cars, smoothly and quickly, to the city.

At noon we went with Mr. Coghlan to see the market and the museum, and to do some shopping. The market is a large open building, well supplied with everything at moderate prices; meat, game, fruit, vegetables, and flowers

being especially cheap and good. House-rent and fine clothes are very dear in Buenos Ayres, but the necessaries of life are certainly cheap. People of the middle and lower classes live much better here than they do in England, and the development of bone and muscle in large families of small children, owing to the constant use of so much meat and strong soup, is very remarkable. Returning to the hotel, we collected our parcels, and then proceeded to the pier, where we found the children waiting for us to embark in the gig, and we soon arrived safely on board the 'Sunbeam.'

Sunday, September 24th.—Most of us went ashore in the whale-boat at ten o'clock, to attend the English church, reopened to-day for the first time for some months. After our own service we met many friends, and walked to the Roman Catholic cathedral. The streets were full of well-appointed carriages, and in the interior of the building we found a great many well-dressed ladies, and a few men. Mass had not commenced, and a constant stream of worshippers was still entering; but we remained only for a short time, and then returned to the Mole. By this time the wind had freshened considerably, and it took us two hours and a-half, beating against the wind, to reach the yacht, drenched to the skin. We were obliged to hurry back again by daylight, before the weather became worse. It was a very pleasant twenty minutes' sail to the shore, racing along before the wind, with two reefs in the mainsail—quite a different thing from beating out. The tide was high, and the captain therefore steered for the pier, where he hoped to land us. Unfortunately, however, he missed it; and as it was impossible to make another tack out, all that could be done was to let go the anchor to save running ashore, and wait until they sent out a small boat to fetch us. This took some little time, during which we pitched and tossed about in a very disagreeable fashion.

When the boat at last arrived, she turned out to be a wretched little skiff, rowed by two men, with very indifferent oars, and only capable of taking three passengers at a time. Tom went first, taking with him the two children, and the two poor sea-sick maids, and the boat at once put off for the land, Tom steering. It was terrible to watch them from the whale-boat, and when one tremendous sea came, and the skiff broached to, I thought for a moment that all was over, as did every one who was watching our proceedings from the pier. I could not look any more, till I heard shouts that they were safe ashore. Then came our turn. The boat returned for us, this time provided with better oars, and we were soon landed in safety, if not in comfort; and a third and last trip brought ashore the rest of the party and the luggage, Tom remaining at the tiller.

From the Hôtel de la Paix, we walked at ten o'clock to the railway-station, where a large number of people had already assembled, some of whom were to accompany us to Azul.

Monday, September 25th.—We were aroused at six o'clock this morning by the agreeable intelligence that we had reached our destination. Azul is about 300 miles south of Buenos Ayres, on the Southern Railway. It is a small and primitive place in itself, but is situated in the midst of splendid pastures, for rearing both sheep and cattle, of which there are large flocks and herds.

Whilst we were waiting for breakfast, we walked a little distance to see a troop of mares treading mud for bricks. It was a curious, but sad sight. Inside a circular enclosure, some fifty yards in diameter, about fifty half-starved animals, up to their houghs in very sloppy mud, were being driven round about, and up and down, as fast as they could go, by a mounted peon, assisted by five or six men on foot, outside the enclosure, armed with long

heavy whips, which they used constantly. Some of the poor creatures had foals which were tied up a little distance off, and which kept up a piteous whinnying, as an accompaniment to the lashings and crackings of the whips.

At nine o'clock the breakfast-bell rang, and we found an excellent repast spread out for us on two long tables. An hour later we started in seven large carriages, and proceeded first to make the tour of the town, afterwards visiting the bank, and a fine new house in the course of construction by a native, built entirely of white marble from Italy. Then we paid a visit to some Indians—an old chief and his four wives, who have settled quietly down in a *toldo* near the town. They were not bad-looking, and appeared fairly comfortable, as they squatted in the open air round the fire, above which was suspended a large iron pot, containing, to judge by the look and smell, a most savoury preparation. We next went to a store, where we picked up a few curiosities, and then drove to the mill of Azul, a new establishment, of which the inhabitants of the town are evidently very proud. There is a pretty walk by the mill-stream, overhung with willows, and close by is another *toldo*, inhabited by more Indians.

Leaving the town, we now proceeded about two leagues across the Pampas to Mr. Frer's estancia. He is a farmer, on a very extensive scale, and possesses about 24,000 sheep and 500 horses, besides goodly herds of cattle. The locusts have not visited this part of the country, and the pastures are consequently in fine condition after the late rains, while the sheep look proportionately well. We passed a large *grasseria*, or place where sheep are killed at the rate of seven in a minute, and are skinned, cut up, and boiled down for tallow in an incredibly short space of time, the residue of the meat being used in the furnace as fuel.

Arrangements had been made for us to see as much of station-life as possible during our short visit. The peons' dinner had been put back, in order that we might witness their peculiar method of roasting, or rather baking, their food, and eating it; but we were rather later than was expected, and the men were so hungry that we were only able to see the end of the performance. Mr. Frer had also sent a long way across the Pampas for some wild horses, belonging to him, in order that we might see them lassoed; and Colonel Donovan had brought with him one of his best domidors, or horse-breakers, that we might have an opportunity of seeing an unbroken colt caught and backed for the first time.

About a hundred horses were driven into a large corral, and several gauchos and peons, some on horseback and some on foot, exhibited their skill with the lasso, by catching certain of the animals, either by the fore leg, the hind leg, or the neck, as they galloped round and round at full speed. The captured animal got a tremendous fall in each case, and if the mounted horse was not very clever and active, he and his rider were very likely to be thrown down also. There was the risk too of the man receiving an injury from the lasso itself, if it should happen to get round his body, in which case he would probably be almost cut in half by the sudden jerk.

The next proceeding was to cast a lasso at a *potro*, or unbroken colt, who was galloping about in the very centre of the troop, at full speed. His fore legs were caught dexterously in the noose, which brought him up, or rather down, instantly, head over heels. Another lasso was then thrown over his head, and drawn quite tight round his neck, and a bridle, composed of two or three thongs of raw hide, was forced into his mouth by means of a slip-knot rein. A sheepskin saddle was placed on his back, the man who was to ride him standing over him, with

one foot already in the stirrup. All this time the poor horse was lying on the ground with his legs tied close together, frightened almost out of his life, trembling in every limb, and perspiring from every pore. When the man was ready, the horse's legs were loosened sufficiently to allow him to rise, and he was then led outside the corral. The lassoes were suddenly withdrawn, and he dashed forwards, springing and plunging upwards, sideways, downwards, in every direction, in the vain effort to rid himself of his unaccustomed load. The man remained

Lassoing Horses.

A.Y.B.

planted, like a rock, in the saddle, pulling hard at the bridle, while a second domidor, mounted on a tame horse, pursued the terrified animal, striking him with a cruel whip to make him go in the required direction. After about ten minutes of this severe exercise, the captive returned to the corral, exhausted, and perfectly cowed, and showing no desire to rejoin his late companions. In order to complete the process of breaking him in, we were told that it would be necessary to keep him tied up for two or three days, rather short of food, and to repeat daily the

operation of saddling, bridling, and mounting, the difficulty being less on each occasion, until at last he would become as quiet as a lamb.

We now saw our train approaching, orders having been given for it to come as far as it could from the station to meet us. We wished good-bye to Mr. Frer and his party, and, with many thanks to all, got into our carriages and drove across the plains to the railway. On our way we passed some large lagunes, full of wild fowl, and surrounded by scarlet flamingoes and pelicans. The ground we had to traverse was very boggy; but at last we reached the train, and climbed into the cars. By nine we had reached the junction for Buenos Ayres, where an engine met us, and took most of our party into the city, in one of the cars, while we went on to Punta Lara, the station for Ensenada.

On arriving we were met by several of our men, who had been allowed to go ashore at Buenos Ayres on Sunday morning, and had not been able to rejoin the yacht since. On Sunday night, when they were to have returned, it was impossible for them to get off. Even the whale-boat was nearly dashed to pieces, at anchor, near the pier. They at last left the shore just in time to see the yacht steaming down the river, with only half her crew on board, and without a pilot. It seems they had been waited for from eight o'clock until eleven; it then became necessary to get under way, for fear of losing the tide. As it was, the yacht had not been able to get near the pier at Ensenada, and was now lying in the river, two miles out. The station-master, having been informed of the state of affairs, very kindly had steam got up in the railway tug to take us off to the yacht, which we reached at 1 a.m.

Tuesday, September 26th.—The morning was fine, with a nice breeze, but the tide was so low that we should have been unable to get alongside the pier until ten o'clock,

when Toim thought we should just miss our guests. It was therefore decided that it would be better to send the steam-tug to meet the special train, especially as, if we took the yacht in, it would be impossible to get out again in the middle of the night, when we had arranged to sail.

The steam-tug came off early, bringing two sheep, half a bullock, and some wild ducks, but there were no vegetables to be had on shore.

Animal food is so cheap and so good in this country that at every meal four or five dishes of beef or mutton, dressed in various ways, are provided. In the camp—as all the country round Buenos Ayres is called—people eat nothing but meat, either fresh or dried, and hardly any flour with it. Especially in the more distant estancias, beef and mutton, poultry and eggs, form the staple food of the inhabitants. Very little bread is eaten, and no vegetables, and an attempt is rarely made to cultivate a garden of any sort. This year, too, the ravages of the locusts have made vegetable food scarcer than ever, and it must now be looked upon quite as a luxury by very many people; for there can be little doubt that to live entirely on meat, even of the best quality, though probably strengthening, must be exceedingly monotonous.

About one o'clock we saw the tug coming off again, this time with her decks crowded. We found she had brought us fifteen ladies and thirty gentlemen—more than we had expected, on account of the shortness of the notice we had been able to give. Every one seemed to be pleased with the appearance of the vessel, never having seen one like her before. Indeed, the only yacht that has ever been here previously is the 'Eothen,' which formerly belonged to us.

It was late before our friends began the task of saying good-bye. At last they left us, steaming round the yacht in the tug, and giving us some hearty cheers as they

passed. The Minister's flag was run up, salutes were exchanged, and the little steamer rapidly started off in the direction of the shore, followed by a dense cloud of her own smoke. Through a telescope we watched our friends disembark at the pier, and saw the train steam away; and then we turned our thoughts to the arrangements for our own departure.

Wednesday, September 27th.—A fine breeze was blowing this morning, in a favourable direction for our start. Having obtained our bill of health, we got the anchor up, and proceeded down the river under sail. Between one and two o'clock we commenced steaming, and in the course of the evening were clear of the River Plate and fairly on our way to the Straits of Magellan.

CHAPTER VIII.

RIVER PLATE TO SANDY POINT, STRAITS OF MAGELLAN.

*I have seen tempests, when the scolding winds
Have rived the knotty oaks ; and I have seen
The ambitious ocean swell and rage and foam,
To be exalted with the threat'ning clouds :
But never till to-night, never till now
Did I go through a tempest dropping fire.*

Thursday, September 28th.—A fine bright morning, with a strong, fair wind. The order to stop firing was given at noon, and we ceased steaming shortly after. There had evidently been a gale from the southward during the last few days, for the swell was tremendous, and considerably diminished our speed. Still, we managed to go twenty-seven knots in two hours and a half.

I was lying down, below, after breakfast, feeling very stupid, when Mabelle rushed into the cabin, saying, 'Papa says you are to come up on deck at once, to see the ship on fire.' I rushed up quickly, hardly knowing whether she referred to our own or some other vessel, and on reaching the deck I found everybody looking at a large barque, under full sail, flying the red union jack upside down, and with signals in her rigging, which our signalman read as 'Ship on fire.' These were lowered shortly afterwards, and the signals, 'Come on board at once,' hoisted in their place. Still we could see no appearance

of smoke or flames, but we nevertheless hauled to the wind, tacked, hove to, and sent off a boat's crew, well armed, thinking it not impossible that a mutiny had taken place on board, and that the captain or officers, mistaking the yacht for a gunboat, had appealed to us for assistance. We were now near enough to the barque to make out her name through a glass—the 'Monkshaven,' of Whitby—and we observed a puff of smoke issue from her deck simultaneously with the arrival of our boat alongside.

'Monkshaven' on Fire,

A.Y.B.

In the course of a few minutes, the boat returned, bringing the mate of the 'Monkshaven,' a fine-looking Norwegian, who spoke English perfectly, and who reported his ship to be sixty-eight days out from Swansea, bound for Valparaiso, with a cargo of smelting coal. The fire had first been discovered on the previous Sunday, and by 6 a.m. on Monday the crew had got up their clothes and provisions on deck, thrown overboard all articles of a combustible character, such as tar, oil, paint, spare spars and sails, planks, and rope, and battened down the hatches.

Ever since then they had all been living on deck, with no protection from the wind and sea but a canvas screen. Tom and Captain Brown proceeded on board at once. They found the deck more than a foot deep in water, and all a-wash; when the hatches were opened for a moment dense clouds of hot suffocating yellow smoke immediately poured forth, driving back all who stood near. From the captain's cabin came volumes of poisonous gas, which had found its way in through the crevices, and one man, who tried to enter, was rendered insensible.

It was perfectly evident that it would be impossible to save the ship, and the captain therefore determined, after consultation with Tom and Captain Brown, to abandon her. Some of the crew were accordingly at once brought on board the 'Sunbeam,' in our boat, which was then sent back to assist in removing the remainder, a portion of whom came in their own boat. The poor fellows were almost wild with joy at getting alongside another ship, after all the hardships they had gone through, and in their excitement they threw overboard many things which they might as well have kept, as they had taken the trouble to bring them. Our boat made three trips altogether, and by half-past six we had them all safe on board, with most of their effects, and the ship's chronometers, charts, and papers.

The poor little dingy, belonging to the 'Monkshaven,' had been cast away as soon as the men had disembarked from her, and there was something melancholy in seeing her slowly drift away to leeward, followed by her oars and various small articles, as if to rejoin the noble ship she had so lately quitted. The latter was now hove-to, under full sail, an occasional puff of smoke alone betraying the presence of the demon of destruction within. The sky was dark and lowering, the sunset red and lurid in its grandeur, the clouds numerous and threatening, the sea

high and dark, with occasional streaks of white foam. Not a breath of wind was stirring. Everything portended a gale. As we lay slowly rolling from side to side, both ship and boat were sometimes plainly visible, and then again both would disappear, for what seemed an age, in the deep trough of the South Atlantic rollers.

For two hours we could see the smoke pouring from various portions of the ill-fated barque. Our men, who had brought off the last of her crew, reported that, as they left her, flames were just beginning to burst from the fore-hatchway; and it was therefore certain that the rescue had not taken place an hour too soon. Whilst we were at dinner, Powell called us up on deck to look at her again, when we found that she was blazing like a tar-barrel. The captain was anxious to stay by and see the last of her, but Tom was unwilling to incur the delay which this would have involved. We accordingly got up steam, and at 9 p.m. steamed round the 'Monkshaven,' as close as it was deemed prudent to go. No flames were visible then; only dense volumes of smoke and sparks, issuing from the hatches. The heat, however, was intense, and could be plainly felt, even in the cold night air, as we passed some distance to leeward. All hands were clustered in our rigging, on the deck-house or on the bridge, to see the last of the poor 'Monkshaven,' as she was slowly being burnt down to the water's edge.

She was a large and nearly new (three years old) composite ship, built and found by her owners, Messrs. Smales, of Whitby, of 657 tons burden, and classed A 1 for ten years at Lloyd's. Her cargo, which consisted of coal for smelting purposes, was a very dangerous one; so much so that Messrs. Nicholas, of Sunderland, from whose mines the coal is procured, have great difficulty in chartering vessels to carry it, and are therefore in the habit of building and using their own ships for the purpose. At Buenos

Ayres we were told that of every three ships carrying this cargo round to Valparaiso or Callao one catches fire, though the danger is frequently discovered in time to prevent much damage to the vessel or loss of life.

The crew of the 'Monkshaven'—Danes, Norwegians, Swedes, Scotch, and Welsh—appear to be quiet, respectable men. This is fortunate, as an incursion of fifteen rough lawless spirits on board our little vessel would have been rather a serious matter. In their hurry and fright, however, they left all their provisions behind them, and it is no joke to have to provide food for fifteen extra hungry mouths for a week or ten days, with no shops at hand from which to replenish our stores.

Some account of the disaster, as gathered from the lips of various members of the crew at different times, may perhaps be interesting. It seems that early on Monday morning, the day following that on which the fire was discovered, another barque, the 'Robert Hinds,' of Liverpool, was spoken. The captain of that vessel offered to stand by them or do anything in his power to help them; but at that time they had a fair wind for Monte Video, only 120 miles distant, and they therefore determined to run for that port, and do their best to save the ship, and possibly some of the cargo. In the course of the night, however, a terrible gale sprang up, the same, no doubt, as the one of which we had felt the effects on first leaving the River Plate. They were driven hither and thither, the sea constantly sweeping the decks. After forty-eight hours the men were all exhausted, while the fire was gradually increasing in strength beneath their feet, and they knew not at what moment it might burst through the decks and envelope the whole ship in flames. They were beginning to abandon all hope of a rescue, when a sail was suddenly discovered; and as soon as the necessary flags could be found, the

same signal which attracted us was displayed. The vessel, now quite close to them, proved to be a large American steamer, but she merely hoisted her own ensign and code-pennant, and then coolly steamed away to the southward. 'I think that captain deserved tarring and feathering, anyway,' one of the men said to me. Another said, 'When we saw that ship go away, we all gave in and lay down in despair to die. But our captain, who is very good to his crew, and a religious man too, said, "There is One above who looks after us all." That was true enough, for, about ten minutes afterwards, as I was talking to the cook, and telling him it was all over with us, I saw a sail to leeward, and informed the captain. We bore down a little, but did not like to go out of our course too much, fearing you might be a "Portuguese," and play us the same trick as the American.' (They could not understand our white ensign; for, our funnel being stowed, we looked like a sailing vessel, while all gunboats of our size are steamers.) 'When we saw it was an English vessel, and that you answered our signals and sent a boat off, we were indeed thankful; though that was nothing to what we feel now at once more having a really dry ship under our feet.'

It was almost impossible to sleep during the night, owing to the heavy rolling, by far the most violent that we have yet experienced.

Friday, September 29th.—Again a fine morning. A fair breeze sprang up, and, the dreaded storm having apparently passed over, we ceased steaming at 6 a.m.

All on board are now settling down into something like order. The stewards are arranging matters below, and measuring out the stores, to allowance the men for twelve days. The men belonging respectively to the port and starboard watches of the 'Monkshaven' have been placed in the corresponding watches on board the

'Sunbeam.' The cook and steward are assisting ours below, and the two boys are very happy, helping in the kitchen, and making themselves generally useful. The deck does not look quite as neat as usual. Such of the men's sea-chests as have been saved are lashed round the steam-chest, so that they can be got at easily, while their bags and other odd things have been stowed on deck, wherever they can be kept dry; for every inch of available space below is occupied. Captain Runciman is writing, with tears in his eyes, the account of the loss of his fine ship.

The great danger of smelting coal, as a ship's cargo, besides its special liability to spontaneous combustion, appears to be that the fire may smoulder in the very centre of the mass so long that, when the smoke is at last discovered, it is impossible to know how far the mischief has advanced. It may go on smouldering quietly for days, or at any moment the gas that has been generated may burst up the vessel's decks from end to end, without the slightest warning. Or it may burn downwards, and penetrate some portion of the side of the ship below water; so that, before any suspicion has been aroused, the water rushes in, and the unfortunate ship and her crew go to the bottom. On board the 'Monkshaven' the men dug down into the cargo in many places on Sunday night, only to find that the heat became more intense the deeper they went; and several of them had their hands or fingers burnt in the operation.

This has been about the best day for sailing that we have had since we left the tropics. The sea has been smooth, and a fair breeze has taken us steadily along at the rate of nine knots an hour. The sun shone brightly beneath a blue sky, and the temperature is delightful. The sunset was grand, though the sky looked threatening; but the moon rose brilliantly, and until we went to bed, at ten o'clock, the evening was as perfect as the

day had been. At midnight, however, Tom and I were awakened by a knock at our cabin door, and the gruff voice of Powell, saying: 'The barometer's going down very fast, please sir, and it's lightning awful in the south-west. There's a heavy storm coming up.' We were soon on deck, where we found all hands busily engaged in preparing for the tempest. Around us a splendid sight presented itself. On one side a heavy bank of black clouds could be seen rapidly approaching, while the rest of the heavens were brilliantly illuminated by forked and sheet lightning, the thunder meanwhile rolling and rattling without intermission. An ominous calm followed, during which the men had barely time to lower all the sails on deck, without waiting to stow them, the foresail and jib only being left standing, when the squall struck us, not very severely, but with a blast as hot as that from a furnace. We thought worse was coming, and continued our preparations; but the storm passed rapidly away to windward, and was succeeded by torrents of rain, so that it was evident we could only have had quite the tail of it.

Saturday, September 30th.—The morning broke bright and clear, and was followed by a calm, bright, sunny day, of which I availed myself to take some photographs of the captain and crew of the 'Monkshaven.' The wind failed us entirely in the afternoon, and it became necessary to get up steam. In the ordinary course of things, we should probably have had sufficient patience to wait for the return of the breeze; but the recent large addition to our party made it desirable for us to lose as little time as possible in reaching Sandy Point. Another grand but wild-looking sunset seemed like the precursor of a storm; but we experienced nothing worse than a sharp squall of hot wind, accompanied by thunder and lightning.

Sunday, October 1st.—A fine morning, with a fair wind. At eleven we had a short service, at four a longer

one, with an excellent sermon from Tom, specially adapted to the rescue of the crew of the burning ship. As usual, the sunset, which was magnificent, was succeeded by a slight storm, which passed over without doing us any harm.

I have said that no provisions were saved from the 'Monkshaven.' As far as the men are concerned, I think this is hardly to be regretted, for I am told that the salt beef with which they were supplied had lain in pickle for so many years that the saltpetre had eaten all the nourishment out of it, and had made it so hard that the men, instead of eating it, used to amuse themselves by carving it into snuff-boxes, little models of ships, &c. I should not, however, omit to mention that Captain Runciman managed to bring away with him four excellent York hams, which he presented to us, and one of which we had to-day at dinner.

Wednesday, October 4th.—At 6 a.m., on going on deck, I found we were hove-to under steam and closely-reefed sails, a heavy gale blowing from the south-west, right ahead. The screw was racing round in the air every time we encountered an unusually big wave; the spray was dashing over the vessel, and the water was rushing along the deck—altogether an uncomfortable morning. As the sun rose, the gale abated, and in the course of the day the reefs were shaken out of the sails, one by one, until, by sunset, we were once more under whole canvas, beating to windward. There were several cries of 'land ahead' during the day; but in each case a closer examination, through a glass, proved that the fancied coast-line or mountain-top existed only in cloud-land.

Thursday, October 5th.—We made the land early, and most uninteresting it looked, consisting, as it did, of a low sandy shore, with a background of light clay-coloured cliffs. Not a vestige of vegetation was anywhere to be seen, and I am quite at a loss to imagine what the guanacos

and ostriches, with which the chart tells us the country hereabouts abounds, find to live upon. About twelve o'clock we made Cape Virgins, looking very like Berry Head to the North of Torbay, and a long spit of low sandy land, stretching out to the southward, appropriately called Dungeness.

About two o'clock we saw in the far distance what looked at first like an island, and then like smoke, but gradually shaped itself into the masts, funnel, and hull of a large steamer. From her rig we at once guessed her to be the Pacific Company's mail boat, homeward bound. When near enough, we accordingly hoisted our number, and signalled 'We wish to communicate,' whereupon she bore down upon us and ceased steaming. We then rounded up under her lee and lowered a boat, and Tom, Mabelle, and I, with Captain Runciman and four or five of the shipwrecked crew, went on board. Our advent caused great excitement, and seamen and passengers all crowded into the bows to watch us. As we approached the ladder the passengers ran aft, and as soon as we reached the deck the captain took possession of Tom, the first and second officers of Mabelle and myself, while Captain Runciman and each of his crew were surrounded by a little audience eager to know what had happened, and all about it. At first it was thought that we all wanted a passage, but when we explained matters Captain Thomas, the commander of the 'Illimani,' very kindly undertook to receive all our refugees and convey them to England. We therefore sent the gig back for the rest of the men and the chests of the whole party, and then availed ourselves of the opportunity afforded by the delay to walk round the ship. It was most amusing to see the interest with which we were regarded by all on board. Passengers who had never been seen out of their berths since leaving Valparaiso, suddenly made their appearance, in dressing-

gowns and wraps, with dishevelled hair and wide-opened eyes, gazing in mute astonishment at us, quite unable to account for our arrival on board in this out-of-the-way spot. A mail steamer does not stop for a light cause, and it was therefore evident to them that the present was no ordinary occurrence. The captain told us that the last time he passed through the Straits he picked up two boats' crews, who had escaped from a burning ship, and who had suffered indescribable hardships before they were rescued.

Captain Runciman is convinced, after comparing notes with the chief officer of the 'Illimani,' that the vessel which refused to notice his signal of distress was the 'Wilmington,' sent down from New York, with a party of forty wreckers, to try and get the steamer 'Georgia' off the rocks near Port Famine, in the Straits of Magellan. If this be so, it is the more surprising that no attempt was made to render assistance to the 'Monkshaven,' provided her signals were understood, as the 'Wilmington' had plenty of spare hands, and could not have been in a particular hurry. Moreover, one would think that, with her powerful engines, she might have made an attempt to tow the distressed vessel into Monte Video, and so secure three or four thousand pounds of salvage money.

The captain of the 'Illimani' kindly gave us half a bullock, killed this morning, a dozen live ducks and chickens, and the latest newspapers. Thus supplied with food for body and mind, we said farewell, and returned to the 'Sunbeam;' our ensigns were duly dipped, we steamed away on our respective courses, and in less than an hour we were out of sight of each other. It is a sudden change for the 'Monkshaven' men, who were all very reluctant to leave the yacht. Many of them broke down at the last moment, particularly when it came to saying good-bye to Tom and me at the gangway of the steamer. They

had seemed thoroughly to appreciate any kindnesses they received while with us, and were anxious to show their gratitude in every possible way.

About 8 p.m. we anchored for the night in Possession Bay. It was thick at sunset, but afterwards clear and cold, with a splendid moon.

Friday, October 6th.—We got under way at 5.30 a.m., and steamed past the low sandy coast of Patagonia and the rugged mountains of Tierra del Fuego, and through the First and Second Narrows, to Cape Negro, where the character of the scenery began to improve a little, the vegetation gradually changing from low scrubby brushwood to respectable-sized trees. When passing between Elizabeth Island, so named by Sir Francis Drake, and the island of Santa Madalena, we looked in vain for the myriads of seals, otters, and sea-lions with which this portion of the Straits is said to abound. We saw only seven or eight little black spots on the shore, in the distance, which disappeared into the sea as we approached.

At 3 p.m. we reached Sandy Point, the only civilised place in the Straits. It is a Chilian settlement, and a large convict establishment has been formed here by the Government. Almost before we had dropped our anchor, the harbour-master came on board, closely followed by the officers of the two Chilian men-of-war lying in the harbour. The rain, which had been threatening all day, now descended in torrents, and we landed in a perfect down-pour. We thought the pier at Buenos Ayres unsafe and rickety; but here matters were still worse, for the head of the structure had been completely washed away by a gale, and no little care was necessary in order to step across the broken timbers in safety. The town, which contains between 1,200 and 1,300 inhabitants, is composed entirely of one-storied log-huts, with slate or tile roofs, and with or without verandahs. They are all arranged in squares,

separated from each other by wide roads ; and the whole settlement is surrounded by stockades.

We went straight to the house of the British Vice-Consul, who received us very kindly, and promised to do what he could to assist us in obtaining supplies ; but the resources of the place are limited, and eggs, ship's beef and biscuits, and water, will, I expect, be the sum total of what we shall be able to procure. In fact, it is rather doubtful whether we shall even be able to renew our stock of coal. In the meantime we started off to potter about the town, finding, however, very little to amuse us. There were some new-laid ostrich eggs to be bought, and some queer-looking worked Patagonian saddle-bags.

I fear we shall not see any of the Patagonians themselves, for they come to the colony only three or four times a year, to purchase supplies, and to sell skins and ostrich eggs. They are a mounted tribe of Indians, living on the northern plains, and are now on their way down here, to pay one of their periodical visits ; but, being encumbered with their families, they move very slowly, and are not expected to arrive for another ten days. They will no doubt bring a splendid supply of skins, just too late for us, which is rather disappointing, particularly as we are not likely to have another opportunity of meeting with them at any of the places we touch at. They live so far in the interior of the country that they very seldom visit the coast.

We went to see three Fuegian females, who are living in a house belonging to the medical officer of the colony. They were picked up a short time since by a passing steamer from a canoe, in which they had evidently sought refuge from some kind of cruelty or oppression. The biggest of them, a stout fine-looking woman, had a terrible gash in her leg, quite recently inflicted, and the youngest was not more than eight years old. They appeared cheerful and happy, but we were told that they are not likely

to live long. After the free life and the exposure to which they have been accustomed, civilisation—in the shape of clothing and hot houses—almost always kills them. Their lungs become diseased, and they die miserably. Their skin is slightly copper-coloured, their complexions high-coloured, their hair thick and black; and, though certainly not handsome, they are by no means so repulsive as I had expected from the descriptions of Cook, Dampier, Darwin, and other more recent travellers.

Saturday, October 7th.—My birthday. Tom gave me a beautiful guanaco-skin robe, and the children presented me with two ostrich rugs. The guanaco is a kind of large deer, and it is said that the robes made from its skin are the warmest in the world. People here assure me that, with the hair turned inside, these robes have afforded them sufficient protection to enable them to sleep in comfort in the open air, exposed to snow, frost, and rain. They are made from the skin of the young fawns, killed before they are thirteen days old, or, better still, from the skins of those which have never had an independent existence. In colour, the animals are a yellowish brown on the back, and white underneath, and they are so small that when each skin is split up it produces only two triangular patches, about the size of one's hand. A number of these are then, with infinite trouble, sewed neatly together by the Indian women, who use the fine leg-sinews of the ostrich as thread. Those worn by the caciques, or chiefs, have generally a pattern in the centre, a brown edging, and spots of red and blue paint on the part which is worn outwards. Such robes are particularly difficult to obtain, on account of the labour and time necessary to produce them. Each cacique keeps several wives constantly employed in making them, of the best as well as of the ordinary description. The ostrich rugs, which are made here, are more ornamental, though not so warm and light

as the guanaco robes. They are made of the entire skin of the ostrich, from which the long wing-feathers have been pulled out.

At eleven o'clock we went ashore. The Governor had kindly provided horses for all the party, and while they were being saddled I took some photographs. There are plenty of horses here, but the only saddles and bridles to be had are those used by the natives. The saddles are very cumbrous and clumsy to look at, though rather picturesque. They are formed of two bits of wood, covered with about a dozen sheepskins and ponchos; not at all uncomfortable to ride in, and very suitable for a night's bivouac in the open. 'Plenty of nice soft rugs to lie upon and cover yourself with, instead of a hard English saddle for your bed and stirrups for blankets,' as a native once said, when asked which he preferred. About one o'clock we started, accompanied by the officers commanding the garrison and two attendant cavaliers, equipped in Chilian style, with enormous carved modern stirrups, heavy bits and spurs much bigger than those whose size struck us so much in the Argentine Republic. We had a pleasant ride, first across a sandy plain and through one or two small rivers, to a saw-mill, situated on the edge of an extensive forest, through which we proceeded for some miles. The road was a difficult one, and our progress was but slow, being often impeded by a morass or by the trunk of a tree which had fallen right across the path, and was now rapidly rotting into touchwood under the influence of the damp atmosphere and incessant rain. Lichens of every colour and shape abounded, and clothed the trunks gracefully, contrasting with the tender spring tints of the leaves, while the long hairy tillandsia, like an old man's beard, three or four feet long, hung down from the topmost branches. The ground was carpeted with moss, interspersed with a few early spring flowers, and the

whole scene, though utterly unlike that presented by any English forest, had a strange weird beauty of its own. Not a sound could be heard ; not a bird, beast, or insect was to be seen. The larger trees were principally a peculiar sort of beech and red cedar, but all kinds of evergreens, known to us at home as shrubs, such as laurastine, and various firs, here attain the proportions of forest-trees. There is also a tree called Winter's Bark (*Drimys Winteri*), the leaves and bark of which are hot and bitter, and form an excellent substitute for quinine. But the most striking objects were the evergreen berberis and mahonia, and the Darwinia, the larger sort of which was covered with brilliant orange, almost scarlet, flowers, which hung down in bunches, of the shape and size of small outdoor grapes.

On our way back we took a sharp turn leading to the sea-shore, to which the forest extends in places, and rode along the beach towards the town. It was low water, or this would not have been possible, and as it was, we often had considerable difficulty in making our way between wood and water. The day was bright and clear, with a bitterly cold wind and occasional heavy showers of rain ; a fair average day for Sandy Point. It is further west, they say, that the weather is so hopeless. Lieutenant Byron, in his terribly interesting account of the wreck of the 'Wager,' says that one fine day in three months is the most that can be expected. I wonder, not without misgivings, if we really shall encounter all the bad weather we not only read of but hear of from every one we meet. Though very anxious to see the celebrated Straits, I shall not be sorry when we are safely through, and I trust that the passage may not occupy the whole of the three weeks which Tom has been advised to allow for it.

We saw a few sea-birds, specially some 'steamer-ducks,' so called from their peculiar mode of progression through

the water. They neither swim nor fly, but use their wings like the paddles of a steamer, with a great noise and splutter, and go along very fast.

We reached the yacht again at half-past five. Dr. Fenton came on board to dinner, and from him we heard a great deal about the colony, the Patagonians or Horse Indians, and the Fuegians or Canoe Indians. The former inhabit, or rather roam over, a vast tract of country. They are almost constantly on horseback, and their only shelter consists of toldos, or tents, made of the skins of the old guanacos, stretched across a few poles. They are tall and strong, averaging six feet in height, and are bulky in proportion; but their size is nothing like so great as old travellers have represented. Both men and women wear a long flowing mantle of skins, reaching from the waist to the ankle, with a large loose piece hanging down on one side, ready to be thrown over their heads whenever necessary, and fastened by a large flat pin hammered out either from the rough silver or from a dollar. This, their sole garment, has the effect of adding greatly in appearance to their height. They never wash, but daub their bodies with paint and grease, especially the women. Their only weapons are knives and bolas, the latter of which they throw with unerring precision. During their visits to the Sandy Point settlement their arms are always taken from them, for they are extremely quarrelsome, particularly when drunk. Their food consists principally of the flesh of mares, troops of which animals always accompany them on their excursions. They also eat ostrich-flesh, which is considered a great delicacy, as well as the fish the women catch, and the birds' eggs they find. Vegetable food is almost unknown to them, and bread is never used, though they sometimes purchase a little flour, rice, and a few biscuits, on the occasion of their visits to the colony.

The Fuegians, or Canoe Indians, as they are generally called, from their living so much on the water, and having no settled habitations on shore, are a much smaller race of savages, inhabiting Tierra del Fuego—literally Land of Fire—so called from the custom the inhabitants have of lighting fires on prominent points as signals of assembly. The English residents here invariably call it Fireland—a name I had never heard before, and which rather puzzled me at first. Whenever it is observed that a ship is in distress, or that shipwrecked mariners have been cast ashore, the signal-fires appear as if by magic, and the natives flock together like vultures round a carcase. On the other hand, if all goes well, vessels often pass through the Straits without seeing a single human being, the savages and their canoes lying concealed beneath the overhanging branches of trees on the shore. They are cannibals, and are placed by Darwin in the lowest scale of humanity. An old author describes them as ‘magpies in chatter, baboons in countenance, and imps in treachery.’ Those frequenting the eastern end of the Straits wear—if they wear anything at all—a deerskin mantle, descending to the waist; those at the western end wear cloaks made from the skin of the sea-otter. But most of them are quite naked. Their food is of the most meagre description, and consists mainly of shell-fish, sea-eggs, for which the women dive with much dexterity, and fish, which they train their dogs to assist them in catching. These dogs are sent into the water at the entrance to a narrow creek or small bay, and they then bark and flounder about and drive the fish before them into shallow water, where they are caught.

Bishop Stirling, of the Falkland Islands, has been cruising about these parts in a small schooner, and visiting the natives, for the last twelve years, and the Governor here tells us that he has done much good in promoting

their civilisation; while the hardships he has endured, and the difficulties and dangers he has surmounted, have required almost superhuman energy and fortitude on his part.

The 'Wilmington' came in this morning. Her captain declared that as the 'Monkshaven' was not hove-to, he never thought that there could be anything seriously amiss with her. His glass was not good enough to enable him to make out the union-jack reversed, or the signal of distress, which he therefore supposed to be merely the ship's number. It was satisfactory to hear this explanation; and as not only the interests of humanity, but his own, were involved, there is every reason to believe that his account of the transaction is perfectly true.

CHAPTER IX.

SANDY POINT TO LOTA BAY.

*And far abroad the canvas wings extend,
 Along the glassy plain the vessel glides,
 While azure radiance trembles on her sides ;
 The lunar rays in long reflection gleam,
 With silver deluging the fluid stream.*

Sunday, October 8th.—At 6 a.m. we weighed anchor, and proceeded on our voyage. At first there was not much to admire in the way of scenery, the shores being low and sandy, with occasional patches of scrubby brushwood, and a background of granite rocks and mountains.

Soon after passing Port Famine we saw the bold outline of Cape Froward, the southernmost point of South America, stretching into the Straits. It is a fine headland, and Tom ordered the engines to be stopped in order to enable Mr. Bingham to sketch, and me to photograph, both it and the splendid view back through the channel we had just traversed to the snowy range of mountains in the distance, crowned by Mount Sarmiento, not unlike the Matterhorn in appearance.

At this point the weather generally changes, and I suppose we must look forward to living in mackintoshes for some little time to come.

In the afternoon, when in English Reach, where many vessels have been lost, great excitement was caused on

board by the appearance of a canoe on our port bow. She was stealing out from the Barbara Channel, and as she appeared to be making direct for us, Tom ordered the engines to be slowed. Her occupants thereupon redoubled their efforts, and came paddling towards us, shouting and making the most frantic gesticulations, one man waving a skin round his head with an amount of energy that threatened to upset the canoe. This frail craft, upon a nearer inspection, proved to be made only of rough planks, rudely tied together with the sinews of animals; in fact, one of the party had to bale constantly, in order to keep her afloat. We flung them a rope, and they came alongside, shouting 'Tabáco, galléta' (biscuit), a supply of which we threw down to them, in exchange for the skins they had been waving; whereupon the two men stripped themselves of the skin mantles they were wearing, made of eight or ten sea-otter skins sewed together with finer sinews than those used for the boat, and handed them up, clamouring for more tobacco, which we gave them, together with some beads and knives. Finally, the woman, influenced by this example, parted with her sole garment, in return for a little more tobacco, some beads, and some looking-glasses I had thrown into the canoe.

The party consisted of a man, a woman, and a lad; and I think I never saw delight more strongly depicted than it was on the faces of the two latter, when they handled, for the first time in their lives probably, some strings of blue, red, and green glass beads. They had two rough pots, made of bark, in the boat, which they also sold, after which they reluctantly departed, quite naked but very happy, shouting and jabbering away in the most inarticulate language imaginable. It was with great difficulty we could make them let go the rope, when we went ahead, and I was quite afraid they would be upset. They were all fat and healthy-looking, and, though not hand-

A.T.B.

CAPE FROWARD.

some, their appearance was by no means repulsive; the countenance of the woman, especially, wore quite a pleasing expression, when lighted up with smiles at the sight of the beads and looking-glasses. The bottom of their canoe was covered with branches, amongst which the ashes of a recent fire were distinguishable. Their paddles were of the very roughest description, consisting simply of split branches of trees, with wider pieces tied on at one end with the sinews of birds or beasts.

Steaming ahead, past Port Gallant, we had a glorious view over Carlos III. Island and Thornton Peaks, until, at about seven o'clock, we anchored in the little harbour of Borja Bay. This place is encircled by luxuriant vegetation, overhanging the water, and is set like a gem amid the granite rocks close at hand, and the far-distant snowy mountains.

Our carpenter had prepared a board, on which the name of the yacht and the date had been painted, to be fixed on shore, as a record of our visit; and as soon as the anchor was down we all landed, the gentlemen with their guns, and the crew fully armed with pistols and rifles, in case of accident. The water was quite deep close to the shore, and we had no difficulty in landing, near a small waterfall. To penetrate far inland, however, was not so easy, owing to the denseness of the vegetation. Large trees had fallen, and, rotting where they lay, under the influence of the humid atmosphere, had become the birthplace of thousands of other trees, shrubs, plants, ferns, mosses, and lichens. In fact, in some places, we might almost be said to be walking on the tops of the trees, and first one and then another of the party found his feet suddenly slipping through into unknown depths below. Under these circumstances we were contented with a very short ramble, and having filled our baskets with a varied collection of mosses and ferns, we

returned to the shore, where we found many curious shells and some excellent mussels. While we had been thus engaged, the carpenter and some of the crew were employed in nailing up our board on a tree we had selected for the purpose. It was in company with the names of many good ships, a portion of which only were still legible, many of the boards having fallen to the ground and become quite rotten.

Near the beach we found the remains of a recent fire, and in the course of the night the watch on deck, which was doubled and well-armed, heard shouts and hoots proceeding from the neighbourhood of the shore. Towards morning, too, the fire was relighted, from which it was evident that the natives were not far off, though they did not actually put in an appearance. I suppose they think there is a probability of making something out of us by fair means, and that, unlike a sealing schooner, with only four or five hands on board, and no motive power but her sails, we are rather too formidable to attack.

Monday, October 9th.—We are indeed most fortunate in having another fine day. At 6 a.m. the anchor was weighed, and we resumed our journey. It was very cold; but that was not to be wondered at, surrounded as we are on every side by magnificent snow-clad mountains and superb glaciers. First we passed Snowy Sound, in Tierra del Fuego, at the head of which is an immense blue glacier. Then came Cape Notch, so called from its looking as if it had had a piece chopped out of it. Within a few yards of the surrounding glaciers, and close to the sea, the vegetation is abundant, and in many places semi-tropical, a fact which is due to the comparatively mild winters, the temperate summers, the moist climate, and the rich soil of these parts. Passing up English Reach, we now caught our first glimpse of the Pacific Ocean, between Cape Pillar on one side, and Westminster Hall, Shell

Bay, and Lecky Point, on the other. Steering to the north, and leaving these on our left hand, we issued from the Straits of Magellan, and entered Smyth's Channel, first passing Glacier Bay and Ice Sound, names which speak for themselves. Mount Joy, Mount Burney, with its round snow-covered summit, rising six thousand feet from the water, and several unnamed peaks were gradually left behind; until, at last, after threading a labyrinth of small islands, we anchored for the night in Otter Bay, a snug little cove, at the entrance to the intricacies of the Mayne Channel.

Tuesday, October 10th.—In the early morning, when we resumed our voyage, the weather was still fine; but a few light clouds were here and there visible, and an icy wind, sweeping down from the mountains, made it appear very cold, though the thermometer—which here averages, I think, 40° to 50° all the year round—was not really low. The line of perpetual snow commences here at an elevation of from 2,500 to 3,500 feet only, which adds greatly to the beauty of the scene; and as it is now early spring the snow is still unmelted, 500 feet, and even less, from the shore. The stupendous glaciers run right down into the sea, and immense masses of ice, sometimes larger than a ship, are continually breaking off, with a noise like thunder, and falling into the water, sending huge waves across to the opposite shore, and sometimes completely blocking up the channels. Some of these glaciers, composed entirely of blue and green ice and the purest snow, are fifteen and twenty miles in length. They are by far the finest we have, any of us, ever seen; and even those of Norway and Switzerland sink into comparative insignificance beside them. The mountains here are not so high as those of Europe, but they really appear more lofty, as their entire surface, from the water's edge to the extreme summit, is clearly visible. At this end of the

Straits they terminate in peaks, resembling Gothic spires, carved in the purest snow; truly 'virgin peaks,' on which the eye of man has but seldom rested, and which his foot has never touched. They are generally veiled in clouds of snow, mist, and driving rain, and it is quite the exception to see them as distinctly as we now do.

After leaving Mayne's Channel, and passing through Union and Collingwood Sounds, we found ourselves beneath the shadow of the splendid Cordilleras of Sarmiento—quite distinct from Mount Sarmiento, already referred to—along the foot of which extended the largest glacier we have yet seen.¹ With Tarleton Pass on our right hand, and Childer's Pass on the left, we came in sight of Owen's Island, one extremity of which is called Mayne Head, and the other Cape Brassey, these places having all been so named by Captain Mayne, during his survey in the 'Nassau,' in 1869. Near the island of Esperanza, the clouds having by that time completely cleared away, and the sun shining brightly, we had a splendid view of another range of snowy mountains, with Stoke's Monument towering high in their midst. The numerous floating icebergs added greatly to the exquisite beauty of the scene. Some loomed high as mountains, while others had melted into the most fanciful and fairy-like shapes—huge swans, full-rigged ships, schooners under full sail, and a hundred other fantastic forms and devices.

As we gradually opened out our anchorage—Puerto Bueno—we found a steamer already lying there, which proved to be the 'Dacia,' telegraph ship, just in from the Pacific coast. Having dropped our anchor at about five p.m., we all went on shore, armed as before, some of the gentlemen hoping to find a stray duck or two, at a fresh-

¹ I should explain that the names of places in these Straits frequently occur in duplicate, and even triplicate, which is rather confusing.

water lake, a little way inland. We met several of the officers of the 'Dacia,' who, being the first comers, did the honours of the place, and told us all they knew about it. The vegetation was as luxuriant and beautiful as usual—in fact, rather more so; for we are now advancing northwards at the rate of about a hundred miles a day. There were no ducks in the lake, but we enjoyed the scramble alongside it, to the point where it falls over some rocks into the sea. The gig was drawn under this waterfall, and having been loaded to her thwarts with about three tons and a half of excellent water, she was then towed off to the yacht, where the water was emptied into our tanks, which were thus filled to the brim. A small iceberg, also towed alongside, afforded us a supply of ice; and we were thus cheaply provided with a portion of the requisite supplies for our voyage. The 'Dacia' had an iceberg half as big as herself lying alongside her, and all hands were at work until late at night, aided by the light of lanterns and torches, chopping the ice up and stowing it away.

Our boat being thus engaged, we were obliged to wait on shore until long past dark; but as we were a large and strong party, it did not much matter. Our men amused themselves by collecting a number of large and excellent mussels, some of which, distinguishable by the peculiar appearance of their shells, arising from a diseased condition of the fish, contained from ten to thirty very small seed pearls.

Wednesday, October 11th.—I never in my life saw anything so beautiful as the view when I came on deck this morning, at a quarter to five. The moon was shining, large and golden, high in the heavens; the rosy streaks of dawn were just tinging the virgin snow on the highest peaks with faint but ever-deepening colour; whilst all around, the foliage, rocks, and icebergs were

still wrapped in the deepest shade. As the sun rose, the pink summits of the mountains changed to gold and yellow, and then to dazzling white, as the light crept down into the valleys, illuminating all the dark places, and bringing out the shades of olive-greens, greys, and purples, in the most wonderful contrasts and combinations of colour. The grandeur of the scene increased with every revolution of the screw, and when fairly in the Guia narrows we were able to stop and admire it a little more at our leisure, Mr. Bingham making some sketches, while I took some photographs. To describe the prospect in detail is quite impossible. Imagine the grandest Alpine scene you ever saw, with tall snowy peaks and pinnacles rising from huge domed tops, and vast fields of unbroken snow; glaciers, running down *into* the sea, at the heads of the various bays; each bank and promontory richly clothed with vegetation of every shade of green; bold rocks and noble cliffs, covered with many-hued lichens; the floating icebergs; the narrow channel itself, blue as the sky above, dotted with small islands, each a mass of verdure, and reflecting on its glassy surface every object with such distinctness that it was difficult to say where the reality ended and the image began. I have seen a photograph of the Mirror Lake, in California, which, as far as I know, is the only thing that could possibly give one an idea of the marvellous effect of these reflections. Unfit Bay, on Chatham Island, looking towards the mountains near Pill Channel and Ladder Hill, which looks as if a flight of steps had been cut upon its face, were perhaps two of the most striking points amid all this loveliness.

All too soon came the inevitable order to steam ahead; and once more resuming our course, we passed through Innocents and Conception Channels, and entered Wide Channel, which is frequently blocked up with ice at this

time of year, though to-day we only met with a few icebergs on their way down from Eyre Sound.

I have already referred to the extraordinary shapes assumed by some of the mountain peaks. That appropriately called Singular Peak—on Chatham Island—and Two-peaked Mountain and Cathedral Mountain—both on Wellington Island—specially attracted our attention to-day. The first-named presents a wonderful appearance,

Two-peaked Mountain.

A.Y.B

from whichever side you view it ; the second reminds one of the beautiful double spires at Tours ; while the last resembles the tapering spire of a cathedral, rising from a long roof, covered with delicate towers, fret-work, and angles. In Wide Channel we felt really compelled to stop again to admire some of the unnamed mountains. One we christened Spire Mountain, to distinguish it from the rest ; it consisted of a single needle-like point,

piercing deep into the blue vault of heaven, and surrounded by a cluster of less lofty but equally sharp pinnacles. This group rose from a vast chain of exquisitely tinted snow-peaks, that looked almost as if they rested on the vast glacier beneath, seamed with dark blue and green crevasses and fissures.

All this time the weather continued perfect. Not a cloud was to be seen, the sun was hot and bright, and the sky was blue enough to rival that of classic Italy. If we could but be sure that this delightful state of things would continue, how pleasant it would be to stop and explore some of these places. We have, however, been so frequently warned of the possibility of detention for days and even weeks at anchor, owing to bad weather, that we are hurrying on as fast as we can, expecting that every day will bring the much-dreaded deluge, gale, or fog. In thick weather it is simply impossible to proceed; and if it comes on suddenly, as it generally does, and finds you far from an anchorage, there is nothing to be done but to heave-to and wait till it clears, sending a party ashore if possible to light a fire, to serve as a landmark, and so enable you to maintain your position. How thankful I am that we have been hitherto able to make the passage under such favourable circumstances! It has been a vision of beauty and variety, the recollection of which can never be effaced.

Europe Inlet, on our right, going up Wide Channel, was full of ice. Husband's Inlet looked as if it was frozen over at the farther end, and Penguin Inlet seemed quite choked up with huge hummocks and blocks of ice. Tom therefore decided not to attempt the passage of Icy Reach, for fear of being stopped, but to go round Saumarez Island to Port Grappler by way of Chasm Reach, rather a longer route. It was a happy decision; for nothing could exceed the weird impressive splendour of this portion of

the Straits. We were passing through a deep gloomy mountain gorge, with high perpendicular cliffs on either side. Below, all was wrapped in the deepest shade. Far above, the sun gilded the snowy peaks and many-tinted foliage with his departing light, that slowly turned to rose-colour ere the shades of evening crept over all, and the stars began to peep out, one by one. We could trace from the summit to the base of a lofty mountain the course of a stupendous avalanche, which had recently rushed down into the sea, crushing and destroying everything

A. Y. B.

Indian Reach.

in its way, and leaving a broad track of desolation behind it. It must for a time have completely filled up the narrow channel; and woe to any unfortunate vessel that might happen to be there at such a moment!

Port Grappler is rather a difficult place to make in the dark; but by eight o'clock we were safely anchored for the night. We all wanted Tom to stay here to-morrow to get some rest, which he much needs; but he has determined to start at five o'clock in the morning as usual, for fear of being caught by bad weather.

Thursday, October 12th.—A day as perfect as yesterday succeeded a clear cold night. We weighed anchor at 5.15 a.m., and, retracing our course for a few miles, passed round the end of Saumarez Island, and entered the narrow channel leading to Indian Reach. The greatest care is here necessary, to avoid several sunken rocks, which have already proved fatal to many ships, a large German steamer having been wrecked as recently as last year. The smooth but treacherous surface of the channel reflected sharply the cliffs and foliage, and its mirror-like stillness was only broken, at rare intervals, by the sudden appearance of a seal in search of a fresh supply of air, or by the efforts, delayed until the very last moment, of a few steamer-ducks, gannets, or cormorants, to get out of our way.

Having accomplished the passage of Indian Reach in safety, we were just passing Eden Harbour, when the cry of 'Canoe ahead!' was raised. A boat was seen paddling out towards us from behind Moreton Island, containing about half-a-dozen people, apparently armed with bows and arrows and spears, and provided with fishing-rods, which projected on either side. One man was standing up and waving, in a very excited manner, something which turned out ultimately to be a piece of cotton-waste. Our engines having been stopped, the canoe came alongside, and we beheld six wild-looking half-naked creatures—two men, three women, and a very small boy, who was crouching over a fire at the bottom of the boat. There were also four sharp, cheery-looking little dogs, rather like Esquimaux dogs, only smaller, with prick ears and curly tails, who were looking over the side and barking vigorously in response to the salutations of our pugs. One man had on a square robe of sea-otter skins, thrown over his shoulders, and laced together in front, two of the women wore sheep-skins, and the rest of the party were

absolutely naked. Their black hair was long and shaggy, and they all clamoured loudly in harsh guttural tones, accompanied by violent gesticulations, for 'tabáco' and 'galléta.' We got some ready for them, and also some beads, knives, and looking-glasses; but through some mistake they did not manage to get hold of our rope in time, and as our way carried us ahead they were left behind. The passage was narrow, and the current strong, and Tom was anxious to save the tide in the dangerous English Narrows. We could not, therefore, give them another chance of communicating with us, and accordingly we went on our way, followed by what were, I have no doubt, the curses—not only deep, but loud—of the whole party, who indulged at the same time in the most furious and threatening gestures. I was quite sorry for their disappointment at losing their hoped-for luxuries, to say nothing of our own at missing the opportunity of bargaining for some more furs and curiosities.

Shortly afterwards there were seen from the masthead crowds of natives among the trees armed with long spears, bows, and arrows, busily engaged pushing off their canoes from their hiding-places in creeks and hollows; so perhaps it was just as well we did not stop, or we might have been surrounded. Not far from this point are the English Narrows, a passage which is a ticklish but interesting piece of navigation. A strong current prevails, and, to avoid a shoal, it is necessary at one point to steer so close to the western shore that the bowsprit almost projects over the land, the branches of the trees almost sweep the rigging, and the rocks almost scrape the side of the vessel. Two men were placed at the wheel, as a matter of precaution, and we appeared to be steering straight for the shore, at full speed, till Tom suddenly gave the order 'Hard a-port!' and the 'Sunbeam' instantly flew round and rushed swiftly past the dangerous spot into

wider waters. It is just here that Captain Trivett was knocked off the bridge of his vessel by the boughs—a mishap he warned Tom against before we left England.

Whilst in the Narrows we looked back, to see everything bright and cheerful, but ahead all was black and dismal. The sky and sun were obscured, the tops of the mountains hidden, and the valleys filled up with thick fog and clouds—all which seemed to indicate the approach of a storm of rain, although the glass was still very high. We went up South Reach and North Reach, in the Messier Channel, till, just as we were off Liberta Bay, in lat. $48^{\circ} 50'$ S., long. $74^{\circ} 25'$ W., the blackest of the black clouds came suddenly down upon us, and descended upon the deck in a tremendous shower—not of rain, but of *dust* and *ashes*. Windows, hatches, and doors were shut as soon as we discovered the nature of this strange visitation, and in about half an hour we were through the worst of it: whereupon dust-pans, brooms, and dusters came into great requisition. It took us completely by surprise, for we had no reason to expect anything of the sort. Assuming the dust to be of volcanic origin, it must have travelled an immense distance; the nearest volcano, as far as we know, being that of Corcovado, in the island of Chiloe, nearly 300 miles off. We had heard from Sir Woodbine Parish, and others at Buenos Ayres, of the terrible blinding dust-storms which occur *there*, causing utter darkness for a space of ten or fifteen minutes; but Buenos Ayres is on the edge of a river, with hundreds and thousands of leagues of sandy plains behind it, the soil of which is only kept together by the roots of the wiry Pampas grass. For this dust to reach the Messier Channel, where we now are, it would have to surmount two chains of snowy mountains, six or seven thousand feet in height, and in many places hun-

dreds of miles in width, and traverse a vast extent of country besides.

The weather was still so fine, and the barometer so high—30·52 inches—that Tom determined to go to sea to-day, instead of stopping at Hale Cove for the night, as we had originally intended. Just before sunset, as we were quitting the narrow channels, the sun pierced through the clouds and lightened up the lonely landscape as well as the broad waters of the Pacific Ocean. Its surface was scarcely rippled by the gentle breeze that wafted us on our course; the light of the setting sun rested, in soft and varied tints, on the fast-fading mountains and peaks; and thus, under the most favourable and encouraging circumstances, we have fairly entered upon a new and important section of our long voyage.

Although perhaps I ought not to say so, I cannot help admiring the manner in which Tom has piloted his yacht through the Straits, for it would do credit, not only to any amateur, but to a professional seaman. He has never hesitated or been at a loss for a moment, however intricate the part or complicated the directions; but having thoroughly studied and mastered the subject beforehand, he has been able to go steadily on at full speed the whole way. It has, however, been very fatiguing work for him, as he hardly ever left the bridge whilst we were under way.

We steamed the whole distance from Cape Virgins to the Gulf of Peñas, 659 knots, in 76 hours, anchoring six times. This gives seven days' steaming, of an average length of eleven hours each; and as we stopped two or three hours, at different times, for Fuegians, photographs, and sketches, our average speed was nine and a half knots, though sometimes, when going with strong currents, it was twelve or fourteen, and, when going against them, barely six knots.

Just at dark, we passed between Wager Island and Cheape Channel, where H.M.S. 'Wager,' commanded by Captain Cheape, was wrecked, and we spent the night in the Gulf of Peñas, almost becalmed.

Friday, October 13th.—We ceased steaming at 7.30 a.m., and made every effort throughout the rest of the day, by endless changes of sail, to catch each fleeting breath of wind. We did not, however, make much progress, owing to the extreme lightness of the breeze.

Sorry as we are to lose the scenery of the Straits, it is pleasant to find the weather getting gradually warmer, day by day, and to be able to regard the morning bath once more as a luxury instead of a terror. The change is also thoroughly appreciated by the various animals we have on board, especially the monkeys and parrots, who may now be seen sunning themselves in every warm corner of the deck. In the Straits, though the sun was hot, there was always an icy feeling in the wind, owing to the presence of enormous masses of snow and ice on every side.

Saturday, October 14th.—Light winds and calms prevailed the whole day. About 2 p.m. we were off the island of Socorro. In the afternoon a large shoal of whales came round the yacht. I was below when they first made their appearance, and when I came on deck they were spouting up great jets of water in all directions, suggestive of the fountains at the Crystal Palace. We were lying so still that they did not seem to be in the least afraid of us, and came quite close, swimming alongside, round us, across our bows, and even diving down under our keel. There was a shoal of small fish about, and the whales, most of which were about fifty or sixty feet in length, constantly opened their huge pink whalebone-fringed mouths so wide that we could see right down their capacious throats.

Sunday, October 15th.—Still calm. We passed the island

of Chiloe to-day, where it always rains, and where the vegetation is proportionately dense and luxuriant. It is inhabited by a tribe of peculiarly gentle Indians, who till the ground, and who are said to be kind to strangers thrown amongst them. Darwin and Byron speak well of the island and its inhabitants, who are probably more civilised since their time, for a steamer now runs regularly once a week from Valparaiso to San Carlos and back for garden produce. The potato is indigenous to the island.

Tuesday, October 17th.—At 6 a.m., there being still no wind, Tom, in despair of ever reaching our destination under sail alone, again ordered steam to be raised. Two hours later a nice sailing breeze sprang up; but we had been so often disappointed that we determined to continue steaming. Just before sunset we saw the island of Mocha in the distance. It is said to have been inhabited at one time by herds of wild horses and hogs, but I think they have now become extinct.

One of our principal amusements during the calm weather has been to fish for cape-pigeons, cape-hens, gulls, and albatrosses, with a hook and line. We have caught a good many in this way, and several entangled themselves in the threads left floating for the purpose over the stern. The cape-pigeons were so tame that they came almost on board, and numbers of them were caught in butterfly-nets. Their plumage is not unlike grebe.

CHAPTER X.

CHILL.

*Sunbeam of summer, oh what is like thee,
Hope of the wilderness, joy of the sea.*

Wednesday, October 18th.—At 3.30 a.m. we were close to the land lying south of the Bay of Lota; at 4 a.m. the engines were stopped on account of the mist; and at 6 a.m. we began to go slowly ahead again, though it was still not very easy to make out the distance and bearing of the coast. The passage into the bay, between the island of Santa Maria and Lavapié Point, is narrow and difficult, and abounds with sunken rocks and other hidden dangers, not yet fully surveyed. Tom said it was the most arduous piece of navigation he ever undertook on a misty morning; but happily he accomplished it successfully. Just as he entered the sun broke through the mist, displaying a beautiful bay, surrounded on three sides by well-wooded hills, and sheltered from all winds except the north. One corner is completely occupied by the huge establishment belonging to Madame Cousiño, consisting of coal-mines, enormous smelting-works, and extensive potteries. The hill just at the back is completely bare of vegetation, which has all been poisoned by the sulphurous vapours from the furnaces. This spot, from its contiguity to the works, has been selected as the site of a village for the accommodation of the numerous labourers and their families. It is therefore to

be hoped that sulphur fumes are not as injurious to animal as they evidently are to vegetable life. As we drew nearer to the shore we could distinguish Madame Cousiño's house, in the midst of a park on the summit of a hill, and surrounded on all sides by beautiful gardens. The general aspect of the coast, which is a combination of rich red earth, granite cliffs, and trees to the water's edge, is very like that of Cornwall and Devonshire.

We had scarcely dropped our anchor before the captain of the port came on board, and told us we were too far from the shore to coal, which was our special object in coming here ; so up went the anchor again, and we steamed a few hundred yards further in, and then let go close to the shore, in deep water. Captain Möller waited to go ashore with us, introduced our steward to the butcher and postmaster of the place, and then accompanied us to Madame Cousiño's gardens.

It was a steep climb up the hill, but we were well rewarded for our labour. Tended by over a hundred men, whose efforts are directed by highly paid and thoroughly experienced Scotch gardeners, these grounds contain a collection of plants from all the four quarters of the globe, and from New Zealand, Polynesia, and Australia. Amid them were scattered all kinds of fantastic grottoes, fountains, statues, and ferneries ; flights of steps, leading downwards to the beach, and upwards to sylvan nooks ; arcades, arched over with bamboos, and containing trellis-work from Derbyshire, and Minton tiles from Staffordshire ; seats of all sorts and shapes, *under* trees, *in* trees, and *over* trees ; besides summer-houses and pagodas, at every corner where there was a pretty view over land or sea.

One of the heads of the establishment, a great friend of Madame Cousiño's, was unfortunately very ill, and as she was nursing him, she could not come out to see us ; but she kindly gave orders to her gardener to send some cut

flowers and some ferns on board the yacht, to decorate the saloon ; and as she was unable to invite us to luncheon at the big house, she sent some champagne and refreshments down to the Casa de la Administracion, where we were most hospitably entertained.

After luncheon we went to see the copper-smelting works, which were very interesting. The manager walked through with us, and explained the processes very clearly. He could tell at once, on taking up a piece of rough ore, fresh from the mine, what percentage of copper or iron it contained, the amount varying from ten to seventy-five per cent. of the gross weight. The furnaces are kept burning night and day, and are worked by three gangs of men ; and the quantity of copper produced annually is enormous. In fact, three parts of the copper used in Europe comes from here. The ore is brought from various parts of Chili and Peru, generally in Madame Cousiño's ships ; and coal is found in such abundance, and so near the surface, that the operation of smelting is a profitable one. Our afternoon, spent amid smoke, and heat, and dirt, and half-naked workmen, manipulating with dexterous skill the glowing streams of molten ore, was a great contrast to our morning ramble.

Having seen the works, and received a curious and interesting collection of copper ore, as a remembrance of our visit, we started in a little car, lined with crimson cloth, and drawn by a locomotive, to visit the various coal-mines. First we went through the park, and then along a valley near the sea, full of wild flowers and ferns, and trees festooned with 'copigue,' the Chilian name for a creeper which is a speciality of this country, and which imparts a character of its own to the landscape during the month of May, when its wreaths of scarlet, cherry, or pink flowers are in full bloom. We went to the mouths of three coal-pits, and looked down into their grimy depths,

but did not descend, as it would have occupied too much time. They are mostly about 1,000 yards in depth, and extend for some distance under the sea.

We next visited a point of land whence we could see an island which closely resembles St. Michael's Mount. It is quite uninhabited, except by a few wild goats and rabbits. The sea-shore is lined with trees to the water's edge, and there are many bold rocks and fine white sandy caves in different parts of it. The mussels found here are enormous—from five to eight inches in length—and they, together with cockles and limpets, form a staple article of food.

Thursday, October 19th.—We have been persuaded by our friends here to try and see a little more of the interior of Chili than we should do if we were to carry out our original intention of going on to Valparaiso in the yacht, and then merely making an excursion to Santiago from that place. We have therefore arranged to proceed at once overland to Santiago, by a route which will enable us to see something of the Cordillera of the Andes, to have a peep at the Araucanian Indians on the frontier, and to visit the baths of Cauquenes. Tom, however, does not like to leave the yacht, and has decided to take her up to Valparaiso, and then come on to Santiago and meet us, in about five or six days' time. The anchor was accordingly hove short, and the mizen hoisted, when we landed this morning, in a drenching rain.

A coach runs daily from Lota to Concepcion, the first stage of our journey, but a special vehicle was engaged for our accommodation.

The rain had made the road terribly greasy, and several times the carriage slewed half-way round and slid four or five feet sideways down the hill, causing us to hold on, in expectation of a spill. At last we reached the bottom in safety, and, crossing a small river, emerged upon the sea-

shore at Playa Negra, or Black Beach, along which we drove for some distance through the deep, loose sand, the horses being up to their fetlocks in water most of the time. Then we forded another little river, and, leaving the beach, proceeded up a steep road, not more than three yards wide, with a ditch on one side and a steep precipice on the other, to the little village of Coronel, overlooking the bay of the same name. While the horses were being changed, we walked down to the little wooden pier, on the sea-shore, and saw the 'Sunbeam' just coming out of Lota Bay.

Drawn up by the side of the pier was a picturesque-looking market-boat, full of many sorts of vegetables, and little piles of sea-eggs, with their spines removed, and neatly tied up with rushes in parcels of three. The people seemed to enjoy them raw, in which state they are considered to be most nutritious; and when roasted in their shells, or made into omelettes, they are a favourite article of food with all classes. Coronel is a great coaling station, and the bay, which is surrounded by tall chimneys, shafts, and piers, connected with the mines, was full of steamers and colliers.

Our road now ran for some time through undulating pasture-land, in which were many large trees, the scene resembling a vast park. Masses of scarlet verbena, yellow calceolaria, and white heath, grew on all sides, while the numerous myrtle, mimosa, and other bushes, were entwined with orange-coloured nasturtiums, and a little scarlet tropæolum, with a blue edge, whose name I forget. Beneath the trees the ground was thickly carpeted with adiantum fern. The road over which we travelled was of the worst description.

Half-way between Coronel and Concepcion, we met the return stage-coach, crowded with passengers, and looking as if it had just come out of the South Kensington

Museum or Madame Tussaud's, or like the pictures of a coach of Queen Elizabeth's time. It was a long low vehicle, with unglazed windows all round it, painted bright scarlet, decorated with brilliant devices on every panel, and suspended, like our own, by means of innumerable leather straps, from huge C springs. The seats on either side held three passengers, and there was a stool in the middle, like the one in the Lord Mayor's coach, on which four people sat, back to back.

Soon after we drew up to rest the horses at a little posada, kept by two Germans, called 'Half-way House,' and seven miles more brought us to a rich and well-cultivated farm belonging to Mr. Hermann, where we stopped to change horses.

It was six o'clock in the evening when we reached the Bio-Bio, a wide shallow river, at the entrance of the town of Concepcion ; it had to be crossed in a ferry-boat, carriage and all, and as it was after hours, we had some difficulty in finding anyone to take us over. At last, in consideration of a little extra pay, six men consented to undertake the job, and having set a square-sail, to keep us from being carried down the river by the current, they punted us over with long poles. Sometimes we had nine feet of water beneath us, but oftener not more than four or five. The boat could not get close to the opposite shore, and it was a great business to get the carriage out and the horses harnessed, in some eighteen inches of water. But at length we reached the Hotel Comercio, where we found comfortable rooms.

This was all very well as far as it went, but when we came to inquire about our onward route we were disappointed to learn that the line to Angol was closed, owing to the breaking down of a bridge, and would remain so until next month, and that, with the exception of a contractor's train, which runs only once a week, there was

nothing by which we could travel. 'To-morrow is Friday,' added Monsieur Letellier, 'and that is so near Monday, what can Madame do better than wait here till then?' By way of consolation, he informed us that there were no Indians now at Angol, as the Araucanian Indians had recently all been driven further back from the frontier by the Chileños, but that, if we were still bent on trying to get there, we could go by boat as far as Nacimiento, where we might, with some difficulty, procure a carriage. The river just now, however, is so low, that the boat frequently gets aground, and remains for two or three days; therefore, taking everything into consideration, we have decided to abandon this part of our programme, for otherwise we shall not reach Santiago in time. In any case, the journey will be a much longer one than we expected.

Friday, October 20th.—We went out for a short stroll round the Plaza before breakfast, which meal was scarcely over when Mr. Mackay arrived in a carriage, and took us off to see what there was to see in the town.

Concepcion has suffered, and still suffers, much from earthquakes. The existing town is only thirty-five years old. The houses are all one story high only, and the streets, or rather roads, between them are wide, in order to afford the inhabitants a chance of escape, should their dwellings be thrown down by a sudden shock. In summer everybody rushes out into the street, no matter what hour of the day or night it may be, as soon as the first symptoms of an earthquake are felt; but during the winter, when the shocks are never so severe, the alarm caused is not so great. The old town was about two miles distant from the present site, near a place now called Penco, but after being demolished in the ordinary way, an immense wave rolled up and completely destroyed all traces of its existence.

We drove out to Puchacai, Mr. Mackay's hacienda, a

pretty little thatched cottage, surrounded by a verandah, in the midst of a garden, where laburnums and lilacs bloom side by side with orange-trees and pomegranates. Round the garden are groves of shady English oaks (the first we have seen since leaving home) and Norfolk Island pines, the effect of the whole scene being strangely suggestive of the idea that a charming little bit of English rural scenery has in some mysterious manner been transported to this out-of-the-way spot in Chili. The interior of the house, which is simply but tastefully furnished, and at the time of our visit was full of fresh flowers, arranged with an artistic eye to colour, bears the same indescribable *homelike* air.

In the afternoon we strolled about the garden, and looked at the farm and stable. In the cottages on the estate some specimens of *miñaque* lace were offered to us—a lace made by most of the peasants in this part of the country. It varies considerably in quality, from the coarse kind, used for covering furniture, to the finest description, used for personal adornment. It is very cheap and wears for ever. The women also spin, dye, and weave the wool from the fleece of their own sheep into the bright-coloured ponchos universally worn, winter and summer, by the men in this country. These ponchos are not made of nearly such good material as those used in the Argentine Republic, but they are considerably gayer and more picturesque in appearance.

Saturday, October 21st.—Having wished good-bye to Mr. Mackay, and taken our seats in the train for Linares, we were now fairly launched on our own resources in a strange country, I being the only one of the party who could speak even a little Spanish. At San Romde we stopped half an hour to allow the train from Chillan to pass. Most of the passengers took the opportunity of breakfasting, but as we were not hungry we occupied the

time in having a chat with the engine-driver, a very intelligent Canadian. He told us that, as it happened, we might have gone to Angol to-day after all, as a special car and engine were going there to take a doctor to see a patient, returning early to-morrow morning.

The railroad runs alongside the Bio-Bio all the way to San Romde. On either bank are low wooded hills, on whose sides vines are cultivated in considerable quantities. The wild flowers grow luxuriantly everywhere: calceolarias especially, in huge bushes of golden bloom, two or three feet high. At San Romde we left the river, and travelled through a pretty and well-cultivated country to Chillan, which derives its name from an Indian word, signifying 'saddle of the sun,' and is so called from the fact that the sun shines upon it through a saddle-shaped pass in the chain of the Andes.

Like Concepcion, the existing town has been recently built at a distance of about a mile from the remains of the old place of the same name, which was overthrown by an earthquake about thirty years ago. The destruction was, however, not so complete as in the case of Concepcion, and some few of the better-conditioned houses are still inhabited by very poor people, though the walls have great cracks in them from top to bottom, and they are otherwise in a deplorable state. A large cattle and horse market is held at Chillan every Saturday, and it is said that, on these occasions, 100,000 dollars frequently change hands in the course of the morning, in the open market-place.

Sunday, October 22nd.—Though it was Sunday, we had no choice but to travel on, or we should not have been able to start until Tuesday. We were therefore up at five o'clock, and at the station before seven. From San Carlos, where we arrived at 8.15 a.m., we started for Linares, which was reached a couple of hours later. It

is a much smaller town than Chillan, but is built on exactly the same plan—Plaza, cathedral, and all.

Our road lay through a rich country, intersected by small rivers, with the distant snowy chain of the Andes as a background, and through thickly planted groves of poplars, growing in long shady avenues, fragrant with perfume from the magnificent roses which blossomed beneath their shade. In the course of our four hours' drive, we crossed a great many streams, in some of which the water was deep enough to come in at the bottom of the carriage; there was always a little pleasing excitement and doubt, as we approached one of these rivulets, as to whether we were to be inundated or not. We met a good many people riding and walking about in their holiday clothes, and at all the cabarets groups of talkers, drinkers, and players were assembled.

The cottages we have seen by the roadside have been picturesque but wretched-looking edifices, generally composed of the branches of trees stuck in the ground, plastered with mud and thatched with reeds. Two outhouses, or arbours, consisting of a few posts and sticks, fastened together and overgrown with roses and other flowers, serve respectively as a cool sitting-room and a kitchen, the oven being invariably built on the ground outside the latter, for the sake of coolness. The women, when young, are singularly good-looking, with dark complexions, bright eyes, and luxuriant tresses, which they wear in two plaits, hanging down their backs far below the waist. The men are also, as a rule, fine-looking. In fact, the land is good, and everybody and everything looks prosperous. The beasts are up to their knees in rich pasture, are fat and sleek, and lie down to chew the cud of contentment, instead of searching anxiously for a scanty sustenance. The horses are well fed, and their coats are fine and glossy, and the sheep, pigs, and other animals are in equally good condition.

It is therefore a cheery country to travel through, and at this spring-time of the year one sees it in its highest perfection.

Before reaching Talca we had to cross the Maule, a wide, deep river, with a swift current. The carriage was first put on board a large flat-bottomed boat, into which the horses then jumped, one by one, the last to embark, tumbling down and rolling among the legs of the others. With a large oar the boat was steered across the stream, down which it drifted about 200 yards into shallow water, where the boatmen jumped out and towed us to a convenient landing-place.

About five o'clock we arrived at Talca, and went straight to the Hotel Colon, kept by Gassaroni. Every Italian who starts an hotel in this part of the world calls it, as a matter of course, 'The Columbus Hotel;' for they are very anxious to claim the great navigator as a countryman, though the Spaniards dispute their right to do so, on the ground that Genoa, where he was really born, was at that time an independent State. While we were waiting for dinner we walked about the town, which so exactly resembles Concepcion and Chillan in the arrangement of its streets, buildings, and trees, that I doubt whether any one familiar with the three places could tell immediately which town he was in, if transported suddenly to the middle of the Plaza, though I believe Talca is rather the largest. It still retains its old Indian name, meaning 'thunder,' doubtless on account of the frequency and violence of the thunder-storms by which it is visited.

Monday, October 23rd.—We left Talca by the 7.30 train, Mr. Budge, who had business at Curico, accompanying us. All the engines and rolling stock this side of Santiago are of American make and pattern. Mr. Budge had secured one of the long cars, with a passage down the centre, and a saloon at each end, for us, so we were

very comfortable, and he told us a great deal about the country as we went along. Like all Chileños, he is very patriotic, and is especially proud of the financial stability of his country. He often said, 'If English people would only invest their money here, instead of in Peru or the Argentine Republic, they would get eight per cent. on good security.' We heard the same thing from many other sources; and it certainly does seem that this country is the most settled, and the least liable to be disturbed by revolutions, of any in South America.

Mr. Budge left us at Pelequen, the next station to San Fernando, having put us in charge of the conductor, who promised to see after us at Cauquenes, but who wofully betrayed his trust. There was no regular station at the latter place, but as the train stopped, and we saw 'Bains de Cauquenes' on an hotel close by, we jumped out just in time to see it go on again. Luckily the other passengers were kind enough to interest themselves on our behalf, and shrieked and hallooed to such good purpose that the engine was once more brought to a standstill, and our luggage was put out. Half-a-dozen little boys carried it to the inn, where I had to explain to the *patron*, in my best Spanish, that we wanted a carriage to go to the baths, seven leagues off. In a wonderfully short space of time, four good horses were harnessed to a queer sort of vehicle, which held four inside and one out, besides the driver, and which had to be entered by means of a ladder. Having all packed in, and paid our fare beforehand, we were rattled off at a merry pace towards the Andes. The road went up and down and round about, and crossed many rivers, but was fairly good throughout. We changed once at a large hacienda, where a man went into a large yard, containing about sixty horses, and dexterously lassoed the particular four required for our use. Several horsemen were waiting about, and I looked at their saddles,

which were made of a dozen or more sheepskins, laid one on the top of the other, forming a soft seat to ride in by day and a comfortable bed to sleep on at night.

Early in the afternoon we saw some buildings in the distance, which we rightly guessed to be the baths, and soon afterwards we passed in at the entrance gate of the establishment, by the side of which was a rock with the word 'Welcome' painted upon its face. The whole distance from the station was twenty-three miles, which we had accomplished in a little over two hours. Driving between hedgerows of roses in full bloom, we were not long in reaching the door of the hotel, where we were received by the proprietor. He told us he was very full, but he managed to find us some small rooms, and then conducted us to the luxuriously fitted bathing establishment. After this came the table-d'hôte, to which about seventy sat down, though many of the visitors were dining in their own rooms.

Tuesday, October 24th.—This is a wonderful place, built entirely of wood. The centre part is a square, seventy yards in extent, surrounded by a single row of one-storied rooms, with doors opening into the courtyard, and windows looking over the river or up into the mountains. In the middle of the square are a pavilion containing two billiard-tables, a boot-blackening arbour, covered with white and yellow jessamine and scarlet and cream-coloured honeysuckle, plenty of flower-beds, full of roses and orange-trees, and a monkey on a pole, who must, poor creature, have a sorry life of it, as it is his business to afford amusement to all the visitors to the baths. From the centre square, marble steps lead to a large hall, with marble baths on either side, for ladies and gentlemen respectively. A few steps further bring one to a delightful swimming-bath, about forty feet square, filled with tepid water. The water, as it springs from the rock, is boiling hot, and

contains, I believe, a good deal of magnesia and other salts, beneficial in cases of rheumatism and gout; but the high temperature of the water makes the air very muggy, and we all found the place relaxing, though perhaps it

Up the Valley towards the Andes.

was because we indulged too freely in the baths, which are a great temptation.

In the afternoon we went for a ride, to see a celebrated view of the Andes. Unfortunately it was rather misty, but we could see enough to enable us to imagine the rest.

Some condors were soaring round the rocky peaks, and the landscape, though well clothed with vegetation, had a weird, dreary character of its own, partly due to the quantity of large cacti that grew in every nook and corner, singly, or in groups of ten or twelve, to the height of twenty or thirty feet. Though they say it hardly ever rains in Chili, a heavy shower fell this afternoon, and our

Cacti of the Cordillera

landlord thoughtfully sent a boy on horseback after us with umbrellas.

Wednesday, October 25th.—The bath was so delightful this morning, that we felt quite sorry it was to be our last. One could very well spend a week or two here, and find plenty to do in the way of excursions into the valleys of the Andes, which look most inviting in the distance.

At half-past ten we set out on our return journey to the railway, and we finally reached Santiago at about 4.50 p.m. No sooner had we got fairly into the station than

the car was invaded by a crowd of porters touting for employment. They are all dressed in white, and wear red caps, on which is a brass number, by means of which they are easily recognised. The landlord from the Hotel Ingles, M. Tellier, met us, and we at once drove off, leaving our luggage to follow, in charge of one of the red-capped gentlemen.

Our luggage arrived just in time to enable us to dress for the second table-d'hôte at six o'clock, after which we went for a walk through some arcades, paved with marble, and full of fine shops, past the Grand Hotel, which was situated at the end of the Alameda, and is built over an arcade of shops. It is a handsome building, and must command a fine view. The cathedral and the archbishop's palace, large but rather dull-looking brick buildings, are close by. The surrounding gardens looked pretty by gaslight, and the scent of roses pervaded the evening air.

CHAPTER XI.

SANTIAGO AND VALPARAISO.

*Gems of the changing autumn, how beautiful you are,
Shining from your glassy stems, like many a golden star.*

Thursday, October 26th.—Our kind hostess at Lota had given us a letter of introduction to her manager at Santiago, who called this morning to inquire what arrangements he could make which would be most agreeable to us during our stay. She had also given orders that her carriages and horses should be placed at our disposal, and at about ten o'clock we all started in an open break, drawn by a pair of good-looking half-bred brown horses, bigger than any we had seen before in this country.

We went first to the Compañía, a large open square, planted with flowers, the site of the old Jesuit Church, which was burnt down on December 8th, 1863. Well known as the story is, I may here recall the tragic details, standing on the very spot where they took place. It was the Feast of the Virgin, and the church was densely crowded with a congregation composed almost entirely of women, principally young, many of whom were servant-girls. Some of the draperies used in the decoration of the building caught fire, the flames spread rapidly, destroying in their course the cords by which the numerous paraffin and oil lamps were suspended across the nave and aisles, and precipitating their burning contents upon the people

beneath. The great doors opened inwards; the crowd, trying to press out, closed them, and kept them hermetically sealed. The priests, anxious to save the church properties and sacred relics, shut the large iron gates across the chancel and kept them fastened, notwithstanding the agonising shrieks of the unhappy victims, many of whom might otherwise have escaped. Their conduct on this terrible occasion created at the time a feeling of bitter and universal indignation, and caused a shock to the popularity and authority of the priesthood in this country, from which it will take them a long time to recover.

Mr. Long told us that, between seven and eight o'clock on the evening of the catastrophe, he was walking with some friends on the Alameda, when he saw smoke rising in dense volumes from the quarter of the city where the house in which he resided was situated. He and his friends ran quickly in the direction of the fire, giving the alarm as they went, and on reaching the church they found the doors closely shut, while fearful screams were issuing from the interior, and smoke and flames pouring from the windows. They got a party of men together accustomed to the use of the lasso—no difficult task here—and with them climbed from the neighbouring houses to the top of the church. Making a hole in the roof, they then dropped their lassoes over some of the women beneath, and so dragged them out of the building; but the number thus saved was necessarily very small, and it happened too often that many of the poor creatures below, in their eagerness to escape, hung on to the legs or body of the one they saw lassoed, and by their weight literally dragged her to pieces. Sometimes even a lasso broke, and those clinging to it, when almost within reach of safety, were again precipitated into the burning mass below. Any one who has seen a raw hide lasso, capable of withstanding

the sudden rush of the fiercest bull ever captured, will be able to realise the immense strain which would be required to cause one to give way. The next morning at daybreak, the interior of the church presented a terrible spectacle. Mr. Long described it as being full of women, standing up, tightly wedged together, their hands stretched out as if in an attitude of supplication, their faces and the upper part of their bodies charred beyond recognition, the lower part, from the waist downwards, completely untouched.

Their remains were buried in one large grave in the cemetery of the Recoleta, and the spot is now marked by a square piece of ground, full of bright flowers, enclosed by iron railings, almost hidden by the creepers that entwine them, and shaded by willows, orange-trees, cypresses, and pomegranates.

Almost every household in Santiago had lost one of its members. One lovely girl of seventeen was pulled out through the roof and taken to Madame Cousiño's residence, where she lay for nearly a fortnight. She suffered the greatest agonies, but was sensible to the last, and gave a graphic account of the whole harrowing scene. The site of the church, hallowed by such sad memories, has never been built upon, but is preserved as an open space, surrounded by a strip of garden, and having in its centre a finely carved monument.

The Houses of Congress were the next thing we went to see, after which we drove through a great part of the city and over a handsome bridge with statues and small niches on either side. Beneath it, however, there is little more than a dry torrent bed; and it is said that an American, when visiting this spot with a Santiago friend, who was showing him round, remarked, 'I guess you ought either to buy a river or sell this here bridge.'

At one o'clock we started again, and had a pleasant

but rather dusty drive of eight miles to Macul, the stud-farm established by the late Don Luis Cousiño.

We had some luncheon at Mr. Canning's house, in a room that had recently been split from top to bottom by an earthquake, and afterwards sat in the verandah to see the horses and some of the cattle, which were brought round for our inspection. Amongst them were Fanfaron, Fandango, and other beautiful thoroughbreds, three fine Cleveland coach-horses, Suffolk cart-horses, and percherons, and some of the young stock.

We rode all over the farm, attended by half-a-dozen peones who drove the young thoroughbred stock together, in the enormous fields, for us to see, and afterwards did the same thing with some of the cattle. We also went through the farm buildings, in one part of which we saw the operation of making lassoes. The best are composed of neatly plaited strips of cured hide, about a quarter of an inch wide; the commoner sort being made from an undressed cow's hide, with the hair on, cut from the centre in an ever-increasing circle, so that they are in one piece, many yards in length. In another part of the farm there were a few acres more of flower-gardens, orange-trees, and kitchen-gardens.

After a delightful gallop of about two hours, we returned to the farmhouse, where we found a fresh pair of horses waiting for us in the break, and drove back to Santiago by moonlight.

Friday, October 27th.—Mr. Long called at half-past eight. We then walked through the streets, to the market-hall, a handsome iron building, commodiously arranged, which was sent out from England in pieces, and put together here. All round it are stalls, where you can get a capital breakfast, generally consisting of coffee, tender beef-steak, buttered toast, and boiled beans, for a small sum. One of our party, who had been at the market

since half-past five, tried one, and fully confirmed the report we had heard as to their excellence and cleanliness. At the time of our visit all these refreshment stalls were crowded, and I felt rather tempted to join one of the hungry merry-looking groups myself. The market was well supplied with meat, fish, vegetables, fruit, and flowers of all kinds, green peas, French beans, and strawberries being specially abundant.

From the market we went to hear high mass at the cathedral. This is a fine building, though the interior seemed very dark. The high altar was illuminated by hundreds of candles, whose light shone on a crowd of kneeling women, all dressed in black, and with black veils over their heads, the contrast between their sombre appearance and the gilding and paintings on the walls being very striking. The organ is of splendid tone and quality, and reverberated grandly through the aisles, and the whole scene was not without a certain impressiveness. I had not thought of paying a visit to the cathedral when I went out this morning, and it was not until I saw every one staring at me that I remembered I had committed the terrible mistake of going to church in a hat, and without any veil; but we remained in a dark corner most of the time, and emerged into open daylight again before any of the authorities of the place had time to observe or remonstrate with me.

In the afternoon we went for a drive in the park, and to see Santa Lucia, of which, as the only hill in Santiago, the inhabitants of the city are very proud.

After a stroll round the park, Mr. Long took us to an emporium for Panama hats, which are made in the Republic of Ecuador, especially at Upegapa and Montecristo, from a special kind of grass, split very fine, and worn by almost everybody on this coast. The best made cost 340 dollars, or about sixty guineas, and fifty pounds is

not at all an uncommon price to pay, though the inferior kind may be had for two pounds. Those ordinarily worn by the gentlemen here cost from twenty to thirty pounds each, but they are so light, pliable, and elastic that they will wear for ever, wash like a pocket-handkerchief, do not get burnt by the sun, and can be rolled up and sat upon—in fact, ill-treated in any way you like—without fear of their breaking, tearing, or getting out of shape. For the yacht, however, where so many hats are lost overboard, they would, I fear, prove a rather unprofitable investment.

At the Union Club some of our party met several English gentlemen, who were most kind and pressing in their invitations to them to stay a few days longer, and go up the mountains to see the views and to have some guanaco shooting. About twenty-four hours from here they say you can have your first shot, and a little further on you meet them in herds which may be counted by thousands. There are also wild horses and wild donkeys. Quaggas and huemuls used to be found, but are now extinct. The last named is a rare animal, exactly resembling a horse in every particular, except that its hoofs are cloven. It used only to be found in the mountains of Chili, and it is one of the supporters of the national coat of arms.

Saturday, October 28th.—At 5 a.m. we were called, and soon afterwards parting gifts of flowers began to arrive, and even I was obliged to confess that four large clothes-baskets full of rosebuds were more than I quite knew what to do with.

We had a pleasant drive down the Alameda, the sun shining brilliantly in a bright blue sky, and the distant mountains for the first time being clearly visible. The station was crowded with vendors of pottery, curious things in buffalo horn, sweetmeats, &c. The rolling stock on this line is of English manufacture, and we were therefore put

into the too familiar, close, stuffy, first-class carriage, and duly locked up for the journey down to Valparaiso. The line, running as it does through mountain gorges for a great portion of the way, must have been a difficult one to make.

Just now the whole country wears a golden tint from the bloom of the *espinosa*, which seems to grow everywhere, and which is now in perfection. The branches of this shrub are so completely covered with little yellow balls of flowers, which come before the leaves, and which have no separate stalk, but grow along the shiny, horny branches, that they look as if they were made of gold. It is called the 'burning bush' here, and its wood is said to be the hardest in the country. The flowers are often plucked off and dried, in which state they are most fragrant and are used for scenting linen and for keeping away moths. The thorns, however, are a terrible nuisance to the shepherds and owners of cattle, catching their clothes and tearing them as they gallop swiftly across over the plains. The whole air is quite perfumed with roses, principally large double pink roses, something like the old-fashioned cabbage rose, though there are a good many of the monthly kind and a few white and deep scarlet ones. They formed hedgerows on either side of the road, and in many places climbed thirty or forty feet up the trees, and then threw down long brambles laden with bloom, almost producing the effect of a wall of pink. There were also plenty of wild flowers of other sorts, such as scarlet and white lilies, larkspurs, evening primroses, and many others whose names I do not know.

At Llaillai we stopped for breakfast, procured at a small restaurant at the station. While waiting for the train for Santiago to come in, we had plenty of time to observe the half-Indian girls selling fruit, flowers, cakes, &c., and jabbering away in a sort of *patois* Spanish, in

recommendation of their wares. Some of them were really pretty, and all were picturesquely dressed in bright-coloured stuffs, their hair neatly done up and decorated with flowers, their faces clean and smiling. At 11.15 a.m. we reached Quillota, where the train was literally besieged by men, women, and children, offering bouquets for sale—two or three of which were thrust in at every carriage window—and baskets of strawberries, cherimoyas, nisperos, melons, oranges, sugar-cane, plantain, bananas, asparagus, green peas, French beans, eggs, chickens, and even fish, fresh from the stream close by. It must evidently be the custom of the Chileños to visit by rail these fertile districts, for the purpose of doing their marketing; for the occupants of the train soon absorbed the entire stock of the vendors, who were left with empty baskets.

I never saw such a country as this is for eggs and chickens. A hen seems never to have a smaller brood than ten, and I have often counted from seventeen to twenty-one chickens with the mother, and, more than once, as many as twenty-four. The inhabitants of the country always seem to finish their meals with eggs in some form or another.

The celebrated 'Bell of Quillota,' a mountain which derives its name from its peculiar shape, and which serves as a good landmark in entering the harbour of Valparaiso, is well seen from the railway, a little below Quillota Station. We stopped again at Limache, a little village, situated in the midst of a fertile country, about twenty-five miles from Valparaiso, where fruit, flowers, &c., were as freely offered for sale as before, and again at Viña del Mar, the next station to Valparaiso.

Valparaiso consists mainly of two interminable streets, running along the edge of the sea, at the foot of the hills, which rise immediately behind them, and on which

are built all the residences and villas of the gentlemen of the place. Very few live in the town itself, which is composed almost entirely of large warehouses and fine shops, where you can get almost anything you want by paying between three and four times as much for it as you would do in England.

We had, as I have said, seen the yacht leave Lota Bay with a strong head-wind blowing, on Thursday, the 19th instant. In a few hours the wind fell to a calm, which then changed to a light favourable breeze, and the 'Sunbeam' reached Valparaiso on the following Saturday afternoon, anchoring out in the bay, not far from H.M.S. 'Opal.' Here they rolled and tumbled about even more than if they had been at sea, the swinging capacities of the saloon tables and lamps being tried to the utmost. On Sunday half the men went ashore for a few hours' leave, but neither they nor the boat returned until the next morning, as they had not been allowed to leave the shore after nine o'clock.

Sunday, October 29th.—We all went ashore to church, having been told it was only five minutes' walk from the landing-place, instead of which it took us at least a quarter of an hour, in an intensely hot sun, to climb up a steep hill. The building itself was large, airy, and cool, and there is a good organ and choir, but most of the choristers had gone away to-day to a picnic in the country.

At four o'clock we went ashore for a ride, and having climbed the hills at the back of the town, which command extensive views over land and sea, we galloped across the downs and through some villages on to the old high road from Valparaiso to Santiago, along which we rode only for a few yards, turning off into a romantic valley, where the path was so narrow that we could barely squeeze through between the thickly growing shrubs and trees. At last we went up a steep hill on to another high road,

and re-entered the town quite at the opposite end to that at which we had left it, after which a ride of two miles along the stony, ill-paved streets brought us to the landing-place.

Monday, October 30th.—We were to be off as soon as the sea-breeze sprang up, at about eleven o'clock, and as I had many letters to write, I was called at 4 a.m., and finished them all before breakfast at eight. But first one visitor and then another arrived, and it was nearly eleven o'clock when we landed to make the final preparations for starting on our long voyage of eleven thousand miles across the Pacific.

Our route, as at present arranged, will be *viâ* the Society, Friendly, and Sandwich Islands. Juan Fernandez (Robinson Crusoe's Island), which we at first thought of visiting, we have been obliged, I am sorry to say, to give up, not on account of its distance from Valparaiso, as it is only 270 miles off, but because it lies too far to the southward, and is consequently quite out of the track of the trade wind, which we ought to pick up, according to the charts and sailing directions, about 500 miles to the northward and westward of this place. I have been trying to persuade Tom to steam out five or six hundred miles, so that we may make a quick passage and economise our time as much as possible, but he is anxious to do *the whole* voyage under sail, and we are therefore taking very little coal on board, in order to be in the best trim. If we do not pick up a wind, however, there is no knowing how long we may loll about. I suppose till we are short of water and fresh provisions, when the fires will be lighted and we shall steam away to the nearest island—uninhabited, we will hope, or at any rate peopled by friendly natives, which is rather the exception than the rule in the south-east corner of the Low Archipelago. There we shall fill up with fresh

water, bananas, bread-fruit, and perhaps a wild hog or two, and resume our voyage to Tahiti. But this is the least favourable view of the matter, and we must hope to fall in with the trades soon, and that they will blow strong and true.

The island of Juan Fernandez now belongs to the Chilian Government, but is let on a long lease to a man who, they say here, is somewhat of a robber. He was very desirous that we should give him a passage in the yacht, and another man wanted to come too, with some pointers, to show us the best spots for game, goats, turtle, crayfish, and sea-fish, with all of which the place abounds. Some cattle have also been introduced, and the island is much frequented by whalers, who go there for fresh provisions and water. There is nothing particular to be seen, however, and the scenery of the island is not remarkable; at least, so people who have been there tell us, and the photographs I have bought quite confirm their report. Admiral Simpson, who stayed there once for a fortnight, told us a good deal about the place, and strongly recommended us not to go there unless we had plenty of time to spare, as we should not be repaid for our trouble, which would probably only result in the dissipation of all our childish illusions.

It was half-past three when the harbour-tug arrived to tow us out of the harbour and so save our getting up steam. There was not a breath of air stirring, but Tom hoped we should find more outside when the tug cast us off. As we dropped slowly out, we had a good view of the harbour and town; and we soon found ourselves once more fairly embarked on the bosom of the wide ocean.

CHAPTER XII.

VALPARAISO TO TAHITI.

*The western sea was all aflame,
The day was well nigh done!
Almost upon the western wave
Rested the broad bright sun.*

Tuesday, October 31st.—Throughout the night a flat calm prevailed. The morning was wet and foggy, or we might still have seen Valparaiso, and perhaps have had a peep at Aconcagua. There was a light contrary wind from the N.W. throughout the day. In the afternoon we saw two whales blowing in the distance.

Wednesday, November 1st.—An almost calm day, with a few light showers, and fitful but unfavourable breezes. Some thirty or forty little birds, which the sailors called Mother Carey's chickens, but which were smaller and more graceful than any I have seen of that name, followed closely in our wake. I was never tired of watching the dainty way in which they just touched the tips of the waves with their feet, and then started off afresh, like a little maiden skipping and hopping along, from sheer exuberance of spirit.

Thursday, November 2nd.—A bright sunny morning, with a heavy swell and light contrary wind, but the sea became more tranquil towards the evening. The sunset was superb, and the afterglow, as is often the case in these latitudes, lighted up sky and sea with an inde-

scribable beauty, which attained its greatest magnificence about five minutes after the sun had disappeared, reminding one of the glorious sunsets of the African deserts, so often described by travellers.

Friday, November 3rd.—Still a blue sky, bright sunshine, smooth sea, and light head wind.

Saturday, November 4th.—As fine as ever. This is certainly sailing luxuriously, if not swiftly. We have now settled down into our regular sea-ways, and have plenty to do on board; so the delay does not much signify. Still, our time is limited, and we all hope to fall in with the trades shortly to carry us to Tahiti or some of the South Sea Islands. We caught half-a-dozen of the little petrels, for stuffing, by floating lines of black cotton astern, in which they became entangled.

To-night's sunset was more superb than ever. Each moment produced a new and ever increasingly grand effect. I mean to try and take an instantaneous photograph of one. It would not, of course, reproduce all the marvellous shades of colouring, but it would perhaps give some idea of the forms of the masses of cloud, which are finer than any I ever saw before. This ocean seems to give one, in a strange way, a sense of solemn vastness, which was not produced to the same extent by the Atlantic. Whether this results from our knowledge of its size, or whether it is only fancy, I cannot say, but it is an impression which we all share.

Sunday, November 5th.—Fine, and considerably hotter, though not unpleasantly so. We had the Litany at eleven, and evening prayers and a sermon at four o'clock. Not a single ship has passed within sight since we left Valparaiso, and the only living creatures we have seen are some albatrosses, a few white boobies, a cape-hen, the little petrels already mentioned, a shoal of porpoises, and two whales.

Monday, November 6th.—Passed, at 3 a.m. to-day, a large barque, steering south, and at 8 a.m. a full-rigged ship, steering the same course. We held—as we do with every ship we pass—a short conversation with her through the means of the mercantile code of signals. (This habit of exchanging signals afterwards proved to have been a most useful practice, for when the report that the ‘Sunbeam’ had gone down with all hands was widely circulated through England, I might almost say the world,—for we found the report had preceded us by telegram to almost all the later ports we touched at,—the anxiety of our friends was relieved many days sooner than it would otherwise have been by the fact of our having spoken the German steamer ‘Sakhara,’ in the Magellan Straits, October 13, four days after we were supposed to have gone to the bottom.) The weather continues fine, and we have the same light baffling winds. We hoped, when we started, to average at least 200 miles a day, but now we have been a week at sea, and have only made good a little more than 700 miles altogether, though we have sailed over 800 miles through the water. It is, however, wonderful, in the opinion of the navigators, that we have made even as much progress as this, considering the very adverse circumstances under which the voyage has so far been performed, and we must endeavour to console ourselves with the reflection that the sailing qualities of the yacht have undergone another severe test in a satisfactory manner. How the provisions and water will last out, and what time we shall leave ourselves to see anything of Japan, are questions which, nevertheless, occasionally present themselves to our minds. Independently of such considerations, nothing could be more luxurious and delightful than our present mode of existence. With perfect weather, plenty of books to read and writing to do, no possibility of interruptions, one can

map out one's day and dispose of one's time exactly as one pleases, until the half-past six o'clock dressing-bell—which always seems to come long before it is wanted—recalls one to the duties and necessities of life.

Wednesday, November 8th.—A grey cloudy morning and a flat calm. At twelve o'clock, to the great joy of everybody on board, Tom decided to get up steam, as we have now been becalmed quite twenty-four hours, and have made but little progress in the right direction for some days. The alacrity with which the order to stow sails and raise the funnel was obeyed—everyone lending a hand—and the delight expressed on every countenance, must have assured him of at least the popularity of his decision.

Whilst we were waiting for steam to be got up, Tom took Muriel and me for a row in the 'Flash,' his own particular little boat, with about four inches of freeboard. The possibility of doing this will give you a better idea of the tranquillity of this vast ocean than any description I can write. At the same time, when we wanted to get into the boat, we found there was a considerable roll on, and that it was no easy matter without the aid of a gangway or ladder. We rowed a little way from the yacht, and, considering how quiet it had seemed to us when on board, it was wonderful to observe how she rolled in the trough of the sea, without sails to steady her or motive power to guide her. The Lota coals, though black and dirty beyond description, burn up very quickly, and in about an hour we were steaming merrily along, the Arabian horseshoe on our bowsprit's end being now pointed direct for the island of Tahiti, instead of for wherever the wind chose to blow us.

Thursday, November 9th.—A flat calm at 6 a.m.; a very light fair wind at 9 a.m. In spite of my remonstrances, Tom determined, at half-past nine, to cease

steaming and try sailing again. About twelve o'clock a puff came that sent us along at the rate of $10\frac{1}{2}$ knots for a short time; but it soon dropped, and during the rest of the afternoon and evening, our average speed was only three or four knots an hour. This is very poor work for the trades, but I don't believe we are really in them yet, in spite of the wind charts. It is possible that they may vary in different years; besides which it is now spring, with the sun south of the line, which would naturally make them lighter.

Saturday, November 11th.—At last we seem to be feeling the influence of the trades, as the wind continues to blow from the same direction, though it varies much in force. Sometimes we are going along at the rate of $11\frac{3}{4}$ knots, sometimes barely five.

Monday, November 13th.—The wind increased in the evening and blew dead aft. In the middle of the night the mizen halyards broke, and blocks and all came down with a tremendous crash, which caused both Tom and me to rush up on deck. About an hour and a half's work put everything straight again, however, though it looked a sad mess at first. We had been remarking at dinner how lucky we had been, with all this rolling about in calms and running before the wind, not to have had anything carried away or any of the ropes chafed. Personally, I think the accident is not to be regretted, for now all the fore and aft canvas is stowed, and we are running under square canvas alone, which is much steadier work, though we still roll considerably.

Tuesday, November 14th.—Fine, with a strong fair wind.

Our victualling arrangements have now been satisfactorily settled, and everybody has been put on an allowance of water, our supply of which will last the whole ship's company of forty persons for five weeks, leaving

one tank still in reserve in case of accidents. As we expect to reach our destination in about three weeks from the present time, we have therefore, I hope, an ample supply for all our requirements.

Thursday, November 16th.—To-day it is really warm—not to say hot—with a bright cloudless sky, which renders an awning acceptable. We saw some ‘bo’s’n’ birds for the first time, and more shoals of flying fish. I wish a few of the latter would come on board; they would be an agreeable addition to our breakfast-table.

Friday, November 17th.—At 8 a.m. the course was altered, our fore-and-aft canvas was set again, and we were once more gliding along swiftly and smoothly through the water, to the great relief of everyone on board. The day was lovely, and though it was warm, a pleasant breeze throughout the ship prevented our feeling uncomfortably hot.

Saturday, November 18th.—The days are so much alike that it is difficult to find anything special to say about them. They fly so quickly that I was surprised to be reminded by the usual singing-practice this afternoon that another week had gone by.

Sunday, November 19th.—The wind was very variable throughout the day. Between 6 and 7 a.m. we were going twelve knots; between 7 and 8 only three; but as we never stop, we manage to make up a fair average on the whole.

At eleven o’clock we had the Communion Service and two hymns. At midday the week’s work was made up, with the following result. Our position was in lat. $15^{\circ} 38' S.$, long. $117^{\circ} 52' W.$; we were 3,057 miles from Valparaiso,—1,335 of which had been accomplished since last Sunday,—and 1,818 miles from Tahiti.

To-day we were not far from Easter Island, the southernmost island of Polynesia. Here as in the Lad-

rones, far away in the north-west quarter of the Pacific, most curious inscriptions are sometimes found carved in stone.

The sails had been flapping, more or less, all day, and at the change of the dog-watches, at six o'clock, Tom ordered the men aft to stow the mizen. This they had scarcely begun to do when a light breeze sprang up, and in a few minutes increased to a strong one, before which we bowled along at the rate of nine knots. These sudden changes are of constant occurrence, and coming as they do without the slightest warning, are quite inexplicable. If only we had our old square sails, and our bigger yards and topmast, we should have saved a good deal of time already; for one or two knots an hour extra amount to from 25 to 50 miles a day, and in a month's run the difference would not be far short of 1,500 miles. But we heard so much from people in England, who had visited these parts, of squalls and hurricanes, that Tom did not like to run the risk of being over-sparred.

Wednesday, November 22nd.—Between 2 and 3 a.m. a nice breeze sprang up, and between 3 and 4.30 a.m. all the fore-and-aft sails were again set. It was deliciously cool on deck at that time; but the sun rose fierce and hot, and more or less killed the breeze as the day wore on.

Thursday, November 23rd.—Twenty-four days out. We had hoped to reach Tahiti to-day, and Tom begins to regret that he did not steam some distance out from Valparaiso, so as to pick up the trades sooner. Still it is satisfactory to know how well the 'Sunbeam' can and does sail against light contrary winds, and to have an opportunity of developing some of her good points, of which we were previously hardly aware. How she manages to slip along as she does, four or five knots an hour, with not sufficient wind to blow a candle out, is a marvel to every one on board. More than once, when the hand-

log has shown that we were going five knots, I have carried a naked light from one end of the deck to the other without its being extinguished.

The sunrise was magnificent, and a splendid albatross, the largest we have yet seen, was at the same time visible in mid-air, floating against the rose-coloured clouds. He looked so grand, and calm, and majestic, that one could almost fancy him the bird of Jove himself, descending direct from the sun. Where do these birds rest? How far and how fast do they really fly? are questions for the naturalist. We have seen them many times at a distance of at least two thousand miles from the nearest land.

About nine o'clock there was a slight breeze, but it fell as the sun rose, and the day was intensely hot.

Sunday, November 26th.—Our fourth consecutive Sunday at sea, and out of sight of land. At 4 a.m. the sails were spread to a good breeze. At 7 we stopped steaming, but at 10 the wind again fell light. The Litany was read on deck this morning on account of the heat. The observations at noon showed that we were in lat. $15^{\circ} 47' S.$, long. $135^{\circ} 20' W.$, the distance accomplished during the last twenty-four hours being 181 miles. We have now made good 4,067 miles from Valparaiso, and are 815 miles distant from Tahiti.

Monday, November 27th.—I was on deck at 3.30 a.m. Everybody on board was more or less excited at the prospect of making land, after twenty-eight days at sea. It was a delicious morning, with a favourable breeze, and under steam and sail we progressed at the rate of from 10 to $11\frac{1}{2}$ knots an hour. Several birds flew on board, amongst whom were two boobies, who hovered round us and appeared to examine everything with great curiosity, especially the little wind-vanes at the extremity of the masts. At last they settled on the foretopmast, where-

upon one of the sailors went up to try and catch them. They observed his movements closely, and appeared to be specially interested in his cap; but as he approached, first one and then the other flew away for a few yards, and then returned to his former position. At last the man, watching his opportunity, managed to seize one of them by his legs and bring him down in triumph, despite flapping wings and pecks from a sharp beak. He was shut up in the fowl-pen—now, alas, empty of its proper denizens—where we had an opportunity of examining him before he was killed. He was a fine, handsome, grey bird, with large blue eyes, and a wild hawk-like look.

At one o'clock we were almost sailing over the spot marked by Findlay as the situation of Tatakotopoto, or Anonymous Island; but there was nothing whatever visible in the shape of land, even from the masthead, where a man was stationed, and from which it was possible to see a distance of ten or fifteen miles. Tom went up himself several times and scanned the horizon carefully, but in vain. It is therefore evident either that the position of the island is incorrectly stated, or that it has become submerged. I believe that in these seas there are many islands marked that have no existence, and that several that do exist are not marked, which renders it necessary to keep a constant good look-out. What a charming task it would be thoroughly to survey these parts, and to correct the present charts where necessary, and how much I should like to be one of the officers appointed for the service!

At 1.30 p.m. land was sighted from the masthead, and at two o'clock I saw from the deck what looked like plumes of dark ostrich feathers rising from the sea. This was the island of Tatakotoroa—also known as Narcissus, or Clarke Island—to the eastward of the Paumotu or Low Archipelago of the South Seas. The sailing direc-

tions describe the inhabitants as 'hostile,' and Sir Edward Belcher mentions that some of them tried to cut off the boats sent from a man-of-war for water. We were therefore afraid to attempt a landing, but sailed as near as we could to the shore, which, surrounded by a rampart of snow-white coral, and clothed almost to the water's edge with feathery palms, cocoa-nut trees, and luxuriant vegetation of various kinds, looked very tempting. A few canoes were drawn up on the beach near a large hut, out

Tatakotoroa or Clarke Island.

A. Y. B.

of which three or four natives came, and, having looked at us for some time, ran off into the woods. Blue smoke could be seen curling up from several points of the forest, no doubt indicating the presence of more natives, whose dwellings were concealed by the trees.

After lunch, Tom had me hoisted up to the foretop-mast-head in a 'boatswain's chair,' which is simply a small plank, suspended by ropes at the four corners, and used by the men to sit on when they scrape the masts.

I was very carefully secured with a rope tied round my petticoats, and, knocking against the various ropes on my way, was then gently hoisted up to what seemed at first a giddy height ; but when once I got accustomed to the smallness of the seat, the airiness of my perch, and the increased roll of the vessel, I found my position by no means an unpleasant one. Tom climbed up the rigging and joined me shortly afterwards. From our elevated post we could see plainly the formation of the island, and the lagoon in the centre, encircled by a belt of coral, in some places white, bare, and narrow, in others wide and covered with palm-trees and rich vegetation ; it was moreover possible to understand better the theory of the formation of these coral islands.

CHAPTER XIII.

THE SOUTH SEA ISLANDS.

*And all throughout the air there reigned the sense
Of waking dream with luscious thoughts o'erladen,
Of joy too conscious made and too intense
By the swift advent of excessive Aiden,
Bewilderment of beauty's affluence.*

Tuesday, November 28th.—We passed Anaa, or Chain Island, in the morning watch, before daybreak. I came on deck to try and get a glimpse of it, and was rewarded by a glorious sunrise. We had a nice eight-knot breeze and a strong current in our favour, and just before breakfast Tom descried from the masthead Amanu, or Möller Island, which we had hardly expected to make before ten or eleven o'clock. Some one remarked that it seemed almost as if it had come out to meet us. The reef encircling this island varies much in height and vegetation. In some places it supports a noble grove of trees, in others the sea breaks over the half-submerged coral-bed, the first obstacle it has met for 4,000 miles, with a roar like thunder.

Before we had lost sight of Amanu, the island of Hao Harpe, or Bow Island, was visible on our port bow. I wished very much to land, and at last persuaded Tom, who was rather anxious on the score of the natives, to allow some of us to make the attempt, cautioning us to turn away from the shore directly, in case the islanders

looked at all doubtful in their attitude and intentions. After lunch, therefore, we hove to, and the gig's crew were ordered to arm themselves with revolvers and rifles, which they were not to show unless required to do so. All the gentlemen had revolvers, and Mabelle and I were also provided with two small ones, Phillips and Muriel being the only unarmed members of the party. I took a bag full of beads, knives, looking-glasses, and pictures, for barter and presents, and with these preparations we set off to make our first personal acquaintance with the islanders of the South Pacific. Tom gave us a tow to windward, and we then rowed direct to a point on one side of the entrance to the lagoon, where we saw some natives waving something white. As we approached we could distinguish several figures standing on the point, under the shade of some cocoa-nut trees, and on the opposite side of the entrance some canoes were drawn up on the beach, by the side of a hut, close to a large clump of low trees. We were by this time surrounded by breakers, and it required no little skill to steer the boat safely through the broken water, between the race of the tide on one side, and the overfall from the coral reef on the other. It was successfully done, however, and, having rounded the point, we found ourselves at once in the waters of the tranquil lagoon. We should have preferred to land at the point, had it been possible, as it was doubtful whether it would be safe to go round the corner, and so lose sight of the yacht; but the intentions of the natives seemed peaceable, several of them running into the water up to their waists to meet us, while others could be seen hurrying along the beach, the women carrying what looked like bunches of fruit.

It is really impossible to describe the beauty of the scene before us. Submarine coral forests, of every colour, studded with sea-flowers, anemones, and echinidæ, of a

brilliancy only to be seen in dreamland, shoals of the brightest and swiftest fish darting and flashing in and out; shells, every one of which was fit to hold the place of honour in a conchologist's collection, moving slowly along with their living inmates: this is what we saw when we looked down, from the side of the boat, into the depths below. The surface of the water glittered with every imaginable tint, from the palest aquamarine to the brightest emerald, from the pure light blue of the turquoise to the deep dark blue of the sapphire, and was dotted here and there with patches of red, brown, and green coral, rising from the mass below. Before us, on the shore, there spread the rich growth of tropical vegetation, shaded by palms and cocoa-nuts, and enlivened by the presence of native women in red, blue, and green garments, and men in motley costumes, bringing fish, fowls, and bunches of cocoa-nuts, borne, like the grapes brought back from the land of Canaan by the spies, on poles.

As soon as we touched the shore the men rushed forward to meet us, and to shake hands, and, having left the muskets and revolvers judiciously out of sight in the boat, we were conducted to a cluster of huts, made of branches, or rather leaves, of the palm-tree, tied by their foot-stalks across two poles, and hanging down to the ground. Here we were met by the women and children, who, likewise, all went through the ceremony of shaking hands with us, after which the head-woman, who was very good-looking, and was dressed in a cherry-coloured calico gown, with two long plaits of black hair hanging down her back, spread a mat for me to sit upon just outside the hut. Most of the women were good-looking, with dark complexions and quantities of well-greased, neatly-plaited black hair; but we did not see a single young girl, though there were plenty of children and babies, and lots of boys,

the latter of whom, like some of the older women, had only a piece of palm matting round their loins. We therefore came to the conclusion that the girls must have been sent away intentionally when the approach of the yacht was observed.

Our First Landing in the South Pacific, Hao or Bow Island.

As soon as I was seated, the head-woman told one of the men to knock down some cocoa-nuts from the trees close by, and after cutting off the ends she offered us a drink of the fresh cool milk, which was all the sweeter and better for the fact that the nuts were not nearly ripe. While this was going on, the natives brought piles of cocoa-nuts, fish, and fowls, and laid them at our feet as a

present. Some of the fish were of a dark brown colour, like bream, others were long and thin, with a pipe-like nose and four fins, somewhat resembling the wings of a flying-fish.

Seeing smoke in the distance, rising from under some high palm-trees, we thought we should like to go and see whence it proceeded, and accordingly set off to walk through a sort of bush, over sharp coral that cut one's boots terribly, the sun blazing down upon us fiercely all the time, until we reached a little settlement, consisting of several huts, the inhabitants of which were absent. Fine plaited mats for beds, cocoa-nut shells for cups, mother-of-pearl shells for plates, and coral, of various kinds and shapes, for dishes and cooking utensils, formed their only furniture. We saw three women, one very old, with nothing but a palm-leaf mat as a covering, the others dressed in the apparently universal costume, consisting of a long bright-coloured gown, put into a yoke at the shoulders, and flowing thence loosely to the ground, which completely conceals the wearer's form, even to the tips of her toes. I think these dresses must come from England or America, for they are evidently machine-made, and the cotton-stuff of which they are composed has the most extraordinary patterns printed on it I ever saw. Cherry and white, dark blue and yellow or white stripes, red with yellow spots, and blue with yellow crosses, appear to be the favourite designs. The women seemed gentle and kind, and were delighted with some beads, looking-glasses, and knives I gave them, in return for which they brought us quantities of beautiful shells.

We saw the large iron knee of a vessel in one spot during our walk, and wondered how it came there. In another place we saw a canoe in process of construction, ingeniously made of boards, sewed together with plaited palm-leaves. The canoes in use here are very high, long,

and narrow, and are only kept from upsetting by means of a tremendous outrigger, consisting of a log fastened to the extremity of two bent pieces of wood, projecting sideways from each end of the boat. The only animals we met with in our ramble were four pigs, and a few chickens, and no other live stock of any kind was visible. No attempt seemed to be made at the cultivation of the ground; and I think, if there had been, we must have observed it, for our party separated and walked a good distance in various directions.

The natives made us understand that on the other side of the entrance to the lagoon, in the better sort of house we had noticed, there resided a white man. He did not, however, make his appearance during our visit, and I imagine he must have been one of those individuals called 'beach-combers,' referred to in so many of the books that treat of the South Sea Islands,—a sort of ne'er-do-well Englishman or American, rather afraid of meeting any of his own countrymen, but very clever at making a bargain between a ship's crew and the natives, with considerable profit to himself.

Among the bushes we found numbers of large hermit-crabs, crawling, or rather running about in whelk shells, half a dozen of them occasionally having a grand fight amongst themselves. We picked up at least twenty different sorts of gracefully shaped pieces of coral, and quantities of shells of an infinite variety of form and colour; cowries, helmet-shells, the shells from which cameos are sometimes cut, mother-of-pearl shells, and a large spiral univalve, nearly a foot long, with dark brown spots and stripes on a delicate cream-coloured ground, like the skin of a tiger or leopard. On our way back to the huts, we peeped into several of the canoes drawn up on the beach, in which were some fish-spears and a fish-hook, nearly three inches long, made of solid mother-of-pearl, the

natural curve of the shell from which it was cut being preserved. A piece of bone was securely fastened to it by means of some pig's hair, but there was no bait, and it seems that the glitter of the mother-of-pearl alone serves as a sufficient allurement to the fish.

In nearly all accounts of voyages in the South Seas much space is devoted to the description of the purchase, or rather barter, of hogs. We thought we could not do better than follow as far as possible the example of our predecessors, and accordingly bought two little pigs for two shillings each. They were evidently quite pets, lying on the mats outside the huts, and coming when called, just like dogs. The one I first bought appeared to be quite happy and content to be carried under my arm. The natives seemed quite to understand the value of money, and did not hesitate to ask for it in return for the cocoa-nuts full of shells which they brought us. I fancy some of the Tahiti schooners trade here for pearl, shells, and bêche-de-mer.

The cocoa-nuts, fowls, fish, coral, &c., having been put into our boat, we shook hands with the friendly islanders and embarked, and having rounded the point we soon found ourselves again in the broken water outside the lagoon, where the race of the tide and the overfall were now much more violent than they had been when we landed. If we had once been drawn into the current, we should have stood a good chance of being knocked to pieces on the coral reefs, strong as our boat was ; but the danger was happily avoided, and we reached the yacht safely, much to Tom's relief.

The natives did not exhibit the slightest curiosity about us during our visit to the island, and though they received us with courtesy, and assisted us as far as they could on our arrival and departure, they did not follow us about while on shore, nor, with the exception of one

or two of them, did they take the trouble to walk across the point to see us get into the open sea and join the yacht. In this respect they might have given a lesson to many civilised people, so gentle, genial, and graceful, yet dignified, were their manners.

The screw having been feathered and the sails set, our voyage was at once resumed. A few miles from where we had landed, we saw, high and dry on the coral reef skirting the island, a large square-built schooner, of about 500 tons, her masts gone, her hull bleached white by the sun, and a great hole in her side. She was on the inside of the reef, and must therefore either have drifted there from the lagoon, or else have been lifted bodily across by one of the big Pacific rollers, in some terrible storm. No doubt the iron knee we had seen on the island originally formed part of this vessel.

Wednesday, November 29th.—We seem to have got into the real south-east trades, just as the chart tells us we ought to expect to lose them; for there was a strong fair breeze all day, which made it very pleasant on deck in the shade of the sails.

The moon was more brilliant this evening than we have yet seen her during our voyage, and we could enjoy sitting on deck reading, and even doing some coarse needlework, without any other light. One splendid meteor flashed across the sky. It was of a light orange colour, with a fiery tail about two degrees in extent, and described in its course an arc of about sixty degrees, from S.S.E. to N.N.W., before it disappeared into space, far above the horizon. If the night had been darker, the spectacle would have been finer; but even as it was, the moon seemed quite paled for a few minutes afterwards. We have seen many meteors, falling-stars, and shooting-stars since we left Valparaiso, but none so fine as the one this evening.

Friday, December 1st.—The sun rose grandly, but the heavy black and red clouds, looking like flames and smoke from a furnace, gave promise of more rain. The heat was greater to-day than any we have yet felt; and it is now nearly mid-winter at home.

At 5 a.m. we made the island of Maitea, and expected to reach it in about an hour and a half; but the wind fell light, and it was a quarter to ten before we got into the gig and set out for the shore. There are not many instructions about landing, either in Captain Cook or Findlay, but the latter mentions that houses are to be found on the south side of the island. We thought, however, we could distinguish from the yacht a little cove, close to some huts, at another part of the shore, where the surf did not break so heavily. We accordingly rowed straight for it, and as we approached we could see the natives coming down from all parts to meet us, the women dressed in the same sort of long, bright, flowing garments we had seen at Hao Harpe, with the addition of garlands round their necks and heads, and men wearing gay-coloured loin-cloths, shirts of Manchester cotton stuff, flying loose in the wind, and sailors' hats with garlands round them, or coloured silk handkerchiefs—red and orange evidently having the preference—tied over their heads and jauntily knotted on one side. Several of the men waded out into the surf to meet us, sometimes standing on a rock two feet above the water, sometimes buried up to their necks by a sudden wave. But the rocks were sharp, the only available passage was narrow, and the rollers long and high; and altogether it looked, upon a closer inspection, too unpromising a place to attempt a landing. Much to the disappointment of the natives, therefore, we decided to go round and try the other side of the island. Seeing us prepare to depart, the people on shore immediately launched a tiny canoe, with an enor-

mous outrigger, and a man dressed in a pale green shirt, dark blue and yellow under garment, and with a silk handkerchief and garland on his head, came alongside and made signs that he would take us ashore one by one in his frail-looking craft. But the heavy Pacific rollers and the sharp rocks daunted us, and we declined his offer with thanks, and rowed off to the southward. Anything more enticing than the cove we were quitting can hardly

Our Boatman

be imagined. A fringe of cocoa-nuts and bread-fruit trees, overhanging an undergrowth of bright glossy foliage and flowers, a few half-hidden palm-leaf covered huts, from one of which—I suppose the chief's—a tattered Tahitian flag floated in the breeze, a small schooner drawn up among the trees and carefully covered with mats,—the steep sugar-loaf point, at the entrance to the cove, clothed to its summit with grass and vegetation : these were the objects which attracted our attention in our hurried survey of the scene.

We had to give the island a wide berth in rowing round it, on account of the heavy rollers, which seemed to come from every side, breaking in surf against the dark brown cliffs, and throwing columns of white spray, from which the brilliant sunshine was reflected in rainbow hues, high into the air. At last we came to a spot where we could see some people sitting on the shore, and several others, who had probably come over from the other side to meet us, running swiftly down the sides of the cliffs to the beach. The island was of a different character from the one we had already visited, and was evidently of volcanic origin. No coral was anywhere to be seen, but there were big rocks jutting out at intervals into the sea all round it, one of which seemed large enough to afford us a sort of shelter in landing. The natives waved and pointed towards the channel beyond this rock, and one or two swam out to meet us ; but we soon found that the channel would not be wide enough to admit our big boat, though it was no doubt sufficient for a light canoe, drawing some two inches of water. We therefore reluctantly turned away and resumed our uneasy coasting voyage, in the course of which we passed some nearly leafless trees, full of white patches, too large for flowers, which afterwards turned out to be booby-birds, who here find a resting-place. They are so numerous that it is hardly possible to walk beneath the trees without treading on their eggs.

Having completed the circuit of the island, we found ourselves once more opposite the spot where we had first thought of landing, and the tide being by this time a little higher, we decided to make another attempt. Some of the natives, seeing us approach, plunged into the water as before, and seized the gunwale of the boat, while others, on shore, brought down rollers to put beneath our keel. We went in on the top of a big wave, and thus at last

found ourselves—boat and all—high and dry on the beach of Maitea.

The people came down to meet us, and conducted us to the house of the chief, who, with his pretty wife, received us kindly, but with much gravity and dignity. Mats were placed for me to sit upon, wreaths were offered me for my head and neck, and cocoa-nut milk to drink. We wished for some bananas, and they immediately cut down a tree in order to obtain a bunch. Cocoa-nuts were at the same time thrown down from the trees, and a collection of fruit, poultry, and meat—the latter consisting of the immemorial hog—was laid at our feet, as a present from the chief. The rest of the natives brought us pearls, shells, mother-of-pearl, small canoes, fish-hooks, young boobies, and all sorts of things, for barter; but the chief himself refused any return for his gift. Perhaps the greatest curiosity they offered us was about six fathoms of fine twine, made from human hair. Before these islands were visited by Europeans, this was the material from which fishing-lines were made; but it is now rarely used, and is consequently very difficult to obtain. The young boobies they brought us looked just like a white powder-puff, and were covered with down far thicker and softer than any swan's down I ever saw.

The natives seemed quite *au fait* in the matter of monetary transactions and exchanges. For an English sovereign they would give you change at the rate of five dollars. Chilian or United States' dollars they accepted readily, but Brazilian currency they would not look at. They were pleased with knives, beads, looking-glasses, and picture papers I had brought on shore, and we did a brisk trade. We experienced great difficulty in explaining to them that we wanted some fresh eggs, Muriel's especial fancy, and a luxury which we have been without for some time. At last, by pointing to the fowls and picking up some small

egg-shaped stones, we managed to get a few, though, from the time it took to collect them, I should think the island must have been scoured in the search for them.

Most of the natives seemed puzzled to comprehend why we had visited the island at all. 'No sell brandy?'—'No.' 'No stealy men?'—'No.' 'No do what then?' Their knowledge of English was too limited to enable us to make them understand that we were only making a voyage of circumnavigation in a yacht.

It was now time to bid farewell to our amiable hosts and their beautiful island. As we reached the landing-place, a small schooner, which we had previously noticed in the distance, came close to the shore, and a canoe put off from the island to meet it. We found that the vessel was bringing back from Tahiti and other places some of the inhabitants of the island, who had been away on a visit or in search of work. The meeting of the reunited friends and relatives was in some cases quite touching. Two women, in particular, sat and embraced each other for nearly a quarter of an hour, without moving, but with tears running down their faces.

All our gifts and purchases having been placed in the boat, and one or two of us having embarked, she was shoved out over the wooden rollers into the narrow channel, where she lay-to while the rest of the party were brought alongside one by one, in a frail canoe—an operation which occupied some time, during which we had leisure once more to admire the little bay I have already attempted to describe. We asked the captain of the schooner, who spoke French, to give us a tow off to the yacht, which he willingly consented to do, chatting cheerfully all the time, but evidently fearful of approaching too close to the yacht, and positively refusing our invitation to him to come on board. There can be little doubt that he mistrusted our intentions, and feared we might attempt to kidnap him and his crew; for the whites have, in too many

cases, behaved in a most villainous manner to the inhabitants of these islands, who are, as a rule—to which there are of course exceptions—a kind and gentle people. I think, if the many instances of the murder of ships' and boats' crews could be thoroughly sifted to the bottom, it would be found that most of them were acts of reprisal and revenge for brutal atrocities committed on the defenceless natives, who have been kidnapped, plundered, and murdered by unscrupulous traders and adventurers. Unfortunately, the good suffer for the bad, and such lives as those of Captain Goodenough and Bishop Patteson are sacrificed through the unpardonable misconduct of others—perhaps their own countrymen. It is still quite a chance how you may be received in some of the islands; for if the visit of the last ship was the occasion of the murder, plunder, and ill-treatment of the inhabitants, it is not to be wondered at that the next comers should be received with distrust, if not with treachery and violence.

We reached the yacht at four o'clock, rather exhausted by so many hours' exposure to the broiling sun, having had nothing to eat since breakfast, at 7 a.m., except coconuts and bananas. The ship was put about, the sails filled, and, continuing steadily on our course throughout the evening, we made the smaller of the two peninsulas that form the island of Tahiti at 10.30 p.m.

Saturday, December 2nd.—We were dodging on and off all night, and at daybreak the weather was thick and rainy. At 4.30 a.m. we made the land again, and crept slowly along it, past Point Venus and the lighthouse in Matavai Bay (Captain Cook's first anchorage), until we were off the Harbour of Papeete.¹ The rain was now descending in torrents, and we lay-to outside the reef for a short time, until a French pilot came on board and took us in through the narrow entrance. It was curious, while we were tumbling

¹ 'Papiete' or 'Papeete,' a *bag of water*.

about in the rough sea outside, to see the natives placidly fishing in the tiniest of canoes on the lagoon inside the reef, the waves beating all the time furiously on the outer surface of the coral breakwater, as if anxious to seize and engulf them.

At nine o'clock we were safely anchored in the chief port of the island of Tahiti.

Perhaps I cannot better bring this account of our long voyage from Valparaiso to a conclusion than by a quotation from a charming book, given to me at Rio, which I have lately been reading—Baron de Hubner's '*Promenade autour du Monde*:'—'*Les jours se suivent et se ressemblent. Sauf le court épisode du mauvais temps, ces trois semaines me font l'effet d'un charmant rêve, d'un conte de fée, d'une promenade imaginaire à travers une salle immense, tout or et lapis-lazuli. Pas un moment d'ennui ou d'impatience. Si vous voulez abréger les longueurs d'une grande traversée, distribuez bien votre temps, et observez le règlement que vous vous êtes imposé. C'est un moyen sûr de se faire promptement à la vie claustrale et même d'en jouir.*'

We have been five weeks at sea, and have enjoyed them quite as much as the Baron did his three. We saw but two ships between Valparaiso and Tatakotoroa: he saw only one between San Francisco and Yokohama. It is indeed a vast and lonely ocean that we have traversed.

Quarantine Island, Papeete.

A. Y. B.

CHAPTER XIV.

AT TAHITI.

*The cava feast, the yam, the cocoa's root,
Which bears at once the cup, and milk, and fruit,
The bread-tree which, without the ploughshare, yields
The unreap'd harvest of unfurrowed fields.*

*These, with the luxuries of seas and woods,
The airy joys of social solitudes,
Tamed each rude wanderer.*

Saturday, December 2nd.—The anchor was dropped in the harbour of Papeete at nine o'clock, and a couple of hours later, by which time the weather had cleared, we went ashore, and at once found ourselves in the midst of a fairy-like scene, to describe which is almost impossible, so bewildering is it in the brightness and variety of its colouring. The magnolias and yellow and scarlet hibiscus, over-shadowing the water, the velvety turf, on to which one steps from the boat, the white road running between rows of wooden houses, whose little gardens are a mass of flowers, the men and women clad in the gayest robes and decked with flowers, the piles of unfamiliar fruit lying on the grass waiting to be transported to the coasting vessels in the harbour, the wide-spreading background of hills clad in verdure to their summits—these are but a few of the objects which greet the new-comer in his first contact with the shore.

We strolled about, and left our letters of introduction; but the people to whom they were addressed were at breakfast, and we were deliberating how best to dispose of our time, when a gentleman accosted us, and, seeing how new it all was to us strangers, offered to show us round the town.

The streets of Papeete, running back at right angles with the beach, seem to have wonderfully grand names, such as the Rue de Rivoli, Rue de Paris, &c. Every street is shaded by an avenue of high trees, whose branches meet and interlace overhead, forming a sort of leafy tunnel, through which the sea-breeze passes refreshingly. There is also what is called the Chinaman's quarter, through which we walked, and which consists of a collection of regular Chinese-built bamboo-houses, whose occupants all wore their national costume, pigtail included. The French commandant lives in a charming residence, surrounded by gardens, just opposite the palace of Queen Pomare, who is at present at the island of Bola-Bola, taking care of her little grandchild, aged five, the queen of the island. She went down in a French man-of-war, the 'Limier,' ten days ago, and has been obliged to remain, owing to some disturbances amongst the natives. I am rather disappointed that she is absent, as I should like to see a person of whom I have heard so much.

Having completed our tour, we next went to call on the British Consul, who received us kindly, and entertained us with an interesting account of the island and its inhabitants, its pearl-fisheries and trade, the French policy, the missionaries, &c., on all of which subjects he is well informed. He has just completed an exhaustive consular report on the condition of the island, which will, no doubt, appear in due course in the form of a blue-book.

At 5 p.m. we went for a row in the 'Glance' and the

'Flash' to the coral reef, now illumined by the rays of the setting sun. Who can describe these wonderful gardens of the deep, on which we now gazed through ten and twenty fathoms of crystal water? Who can enumerate or describe the strange creatures moving about and darting hither and thither, amid the masses of coral forming their submarine home? There were shells of rare shape, brighter than if they had been polished by the hand of the most skilful artist; crabs of all sizes, scuttling and sidling along; sea-anemones, spreading their delicate feelers in search of prey; zoophytes, of many other kinds, crawling slowly over the reef; and scarlet, blue, yellow, gold, violet, spotted, striped, and winged fish, short, long, pointed, and blunt, of the most varied shapes, darting about like birds among the coral trees.

At last, after frequent stoppages, to allow time for admiration, we reached the outer reef, hauled the boat up and made her fast, and, in bathing shoes, started on a paddling expedition. Such a paddle it was, too, over the coral, the surf breaking far above our heads, and the under-flow, though only a few inches deep, nearly carrying me and the children off our legs! There were one or two native fishermen walking along the reef, whipping the water; but they appeared to have caught only a few small rock-fish, pretty enough to look at, but not apparently good to eat.

The shades of night compelled us to return to the yacht, laden with corals of many different species. After dinner the bay was illuminated by the torches of the native fishermen, in canoes, on the reef. Tom and I went to look at them, but did not see them catch anything. Each canoe contained at least three people, one of whom propelled the boat, another stood up waving about a torch dipped in some resinous substance, which threw a strong light on the water, while the third stood in the bows,

armed with a spear, made of a bundle of wires, tied to a long pole, not at all unlike a gigantic egg-whip, with all its loops cut into points. This is aimed with great dexterity at the fish, who are either transfixed or jammed between the prongs. The fine figures of the natives, lighted up by the flickering torches, and standing out in bold relief against the dark blue starlit sky, would have served as models for the sculptors of ancient Greece.

Sunday, December 3rd.—At a quarter to five this morning some of us landed to see the market, this being the great day when the natives come in from the country and surrounding villages, by sea and by land, in boats, or on horseback, to sell their produce, and buy necessities for the coming week. We walked through the shady streets to the two covered market buildings, partitioned across with great bunches of oranges, plantains, and many-coloured vegetables, hung on strings. The mats, beds, and pillows still lying about suggested the idea that the salesmen and women had passed the night amongst their wares. The gaily attired, good-looking, flower-decorated crowd, of some seven or eight hundred people, all chatting and laughing, and some staring at us—but not rudely—looked much more like a chorus of opera-singers, dressed for their parts in some grand spectacle, than ordinary market-going peasants. Whichever way one turned, the prospect was an animated and attractive one. Here, beneath the shade of large, smooth, light-green banana leaves, was a group of earnest bargainers for mysterious-looking fish, luscious fruit, and vegetables; there, sheltered by a drooping mango, whose rich clusters of purple and orange fruit hung in tempting proximity to lips and hands, another little crowd was similarly engaged. Orange-trees were evidently favourite *rendezvous*; and a row of flower-sellers had established themselves in front of a hedge of scarlet hibiscus and double Cape jasmine. Every vendor carried

his stock-in-trade, however small the articles composing it might be, on a bamboo pole, across his shoulder, occasionally with rather ludicrous effect, as, for instance, when the thick but light pole supported only a tiny fish six inches long at one end, and two mangoes at the other.

We strolled about until six o'clock, at which hour the purchasers began to disperse, and were just preparing to depart likewise, when an old man, carrying half-a-dozen little fish, and followed by a small boy laden with vegetables and fruit, introduced himself to us as the brother-in-law of Queen Pomare IV. and chief of Papeete, and, after a short talk, invited us to visit him at his house. We consented, and, following him, presently reached a break in the hedge and ditch that ran along the side of the road, beyond which was a track, bordered by pine-apples and dracænas, leading to a superior sort of house, built in the native style, and surrounded, as usual, by bread-fruit, cocoa-nut, banana, mango, and guava trees. We were conducted into the one large room, which contained two fourpost bedsteads and four mattresses, laid on the floor, two or three trunks, and a table in the corner, on which were writing materials and a few books. The chief himself spoke a very little English, his son an equally small amount of French; so the conversation languished, and after a decent interval we rose to depart.

At half-past eight we breakfasted, so as to be ready for the service at the native church at ten o'clock; but several visitors arrived in the interval, and we had rather a bustle to get off in time, after all. We landed close to the church, under the shade of an hibiscus, whose yellow and orange flowers dropped off into the sea and floated away amongst the coral rocks, peeping out of the water here and there. The building appeared to be full to overflowing. The windows and doors were all wide open, and many members of the congregation were seated on the steps, on the lawn,

and on the grassy slope beyond, listening to a discourse in the native language. Most of the people wore the native costume, which, especially when made of black stuff and surmounted by a little sailor's hat, decorated with a bandana handkerchief or a wreath of flowers, was very becoming.

After service we drove through the shady avenues of the town into the open country, past trim little villas and sugar-cane plantations, until we turned off the main road, and entered an avenue of mangoes, whence a rough road, cut through a guava thicket, leads to the main gate of Faataua¹—a regular square Indian bungalow, with thatched roofs, verandahs covered with creepers, windows opening to the ground, and steps leading to the gardens on every side, ample accommodation for stables, kitchens, servants, being provided in numerous outbuildings.

Soon after breakfast, we drove to the outskirts of a dense forest, through which a footpath leads to the waterfall and fort of Faataua. Here we found horses waiting for us, on which we rode, accompanied by the gentlemen on foot, through a thick growth of palms, orange-trees, guavas, and other tropical trees, some of which were overhung and almost choked by luxuriant creepers. Specially noticeable among the latter was a gorgeous purple passion-flower, with orange-coloured fruit as big as pumpkins, that covered everything with its vigorous growth. The path was always narrow and sometimes steep, and we had frequently almost to creep under the overhanging boughs, or to turn aside to avoid a more than usually dense mass of creepers. We crossed several small rivers, and at last reached a spot that commanded a view of the waterfall, on the other side of a deep ravine. Just below the fort that crowns the height, a river issues from a narrow cleft in the rock, and falls at a single bound from the edge of an almost perpendicular cliff, 600 feet high, into the valley

¹ 'Fuatawah' or 'Faataua,' *to make friends.*

beneath. First one sees the rush of blue water, gradually changing in its descent to a cloud of white spray, which in its turn is lost in a rainbow of mist. Imagine that from beneath the shade of feathery palms and broad-leaved bananas through a network of ferns and creepers you are looking upon the Staubbach, in Switzerland, magnified in height, and with a background of verdure-clad mountains, and you will have some idea of the fall of Faataua as we beheld it.

After resting a little while and taking some sketches, we climbed up to the fort itself, a place of considerable interest, where the natives held out to the very last against the French. On the bank opposite the fort, the last islander killed during the struggle for independence was shot while trying to escape. Situated in the centre of a group of mountains, with valleys branching off in all directions, the fort could hold communication with every part of the coast, and there can be little doubt that it would have held out much longer than it did, but for the treachery of one of the garrison, who led the invaders, under cover of the night and by devious paths, to the top of a hill commanding the position.

Having enjoyed some strawberries and some icy cold water from a spring, and heard a long account of the war from the *gardiens*, we found it was time to return. We descended much more quickly than we had come up, but daylight had faded into the brief tropical twilight, and that again into the shades of night, ere we reached the carriage.

Dinner and evening service brought the day to a conclusion, and I retired, not unwillingly, to bed, to dream of the charms of Tahiti.

Sometimes I think that all I have seen must be only a long vision, and that too soon I shall awaken to the cold reality; the flowers, the fruit, the colours worn by every

one, the whole scene and its surroundings seem almost too fairylike to have an actual existence.

At daybreak next morning, when I went on deck, it was a dead calm. The sea-breeze had not yet come in, and there was not a ripple on the surface of the harbour. Outside, two little white trading schooners lay becalmed; inside, the harbour-tug was getting up steam. On shore, a few gaily dressed natives were hurrying home with their early market produce, and others were stretched lazily on the grass at the water's edge or on the benches under the trees. The light mists rolled gradually away from the mountain tops, and there was every prospect of a fine day for a projected excursion.

We breakfasted at half-past six, and, at a little before eight, went ashore, where we were met by a sort of *char-à-bancs*, or American wagon, with three seats, one behind the other, all facing the horses, and roomy and comfortable enough for two persons. A Chinese coachman and a thin but active pair of little horses completed the turn-out.

The sun was certainly very powerful when we emerged from the shady groves of Papeete, but there was a nice breeze, and sometimes we got under the shade of cocoa-nut trees. We reached Punaia at about half-past nine, and changed horses there. While waiting, hot and thirsty, under the shelter of some trees, we asked for a cocoa-nut, whereupon a man standing by immediately tied a withy of banana leaves round his feet and proceeded to climb, or rather hop, up the nearest tree, raising himself with his two hands and his feet alternately, with an exactly similar action to that of our old friend the monkey on the stick. People who have tasted the cocoa-nut only in England can have no idea what a delicious fruit it really is when nearly ripe and freshly plucked. The natives remove the outer husk, just leaving a little piece to serve as a foot for the pale

brown cup to rest on. They then smooth off the top, and you have an elegant vase, something like a mounted ostrich egg in appearance, lined with the snowiest ivory, and containing about three pints of cool sweet water. Why it is called milk I cannot understand, for it is as clear as crystal, and is always cool and refreshing, though the nut in which it is contained has generally been exposed to the fiercest sun. In many of the coral islands, where the water is brackish, the natives drink scarcely anything but cocoa-nut milk; and even here, if you are thirsty and ask for a glass of water, you are almost always presented with a cocoa-nut instead.

From Punauia onwards the scenery increased in beauty, and the foliage was, if possible, more luxuriant than ever. The road ran through extensive coffee, sugar-cane, Indian corn, orange, cocoa-nut, and cotton plantations, and vanilla, carefully trained on bamboos, growing in the thick shade. Near Atimaono we passed the house of a great cotton planter, and, shortly afterwards, the curious huts, raised on platforms, built by some islanders he has imported from the Kingsmill group to work his plantations. They are a wild, savage-looking set, very inferior to the Tahitians in appearance. The cotton-mills, which formerly belonged to a company, are now all falling to ruin; and in many other parts of the island we passed cotton plantations uncleaned and neglected, and fast running to seed and waste. So long as the American war lasted, a slight profit could be made upon Tahitian cotton; but now it is hopeless to attempt to cultivate it with any prospect of adequate return.

In many places along the road people were making hay from short grass, and in others they were weighing it preparatory to sending it into town. But they say the grass grown here is not at all nourishing for horses, and some people import it from Valparaiso.

The road round the island is called the Broom Road. Convicts were employed in its original formation, and now it is the punishment for any one getting drunk in any part of the island to be set to work to sweep, repair, and keep in order, a piece of the road in the neighbourhood of his dwelling. It is the one good road of Tahiti, encircling the larger of the two peninsulas close to the sea-shore, and surmounting the low mountain range in the centre of the isthmus.

Before long we found ourselves close to Taravao, the narrow strip of land connecting the two peninsulas into which Tahiti is divided, and began to ascend the hills that form the backbone of the island. We climbed up and up, reaching the summit at last, to behold a magnificent prospect on all sides. Then a short sharp descent, a long drive over grass roads through a rich forest, and again a brief ascent, brought us to our sleeping-quarters for the night, the Hôtel de l'Isthme, situated in a valley in the midst of a dense grove of cocoa-nuts and bananas, kept by two retired French sailors.

Tuesday, December 5th.—The heat in the night was suffocating.

It is now the middle of the rainy season in Tahiti; but, luckily for us, it is nearly always fine in the daytime. At night, however, there is often a perfect deluge, which floods the houses and gardens, turns the streams into torrents, but washes and refreshes the vegetation, and leaves the landscape brighter and greener than before.

At half-past seven the horses were put to, and we were just ready for a start, when down came the rain again, more heavily than before. It was some little time before it ceased enough to allow us to start, driving along grassy roads and through forests, but moving rather slowly, owing to the soaked condition of the ground. If you can imagine the Kew hot-houses magnified and mul-

tiplied to an indefinite extent, and laid out as a gentleman's park, traversed by numerous grassy roads fringed with cocoa-nut palms, and commanding occasional glimpses of sea, and beach, and coral reefs, you will have some faint idea of the scene through which our road lay.

Many rivers we crossed, and many we stuck in, the gentlemen having more than once to take off their shoes and stockings, tuck up their trousers, jump into the water, and literally put their shoulders to the wheel. Sometimes we drove out into the shallow sea, till it seemed doubtful when and where we should make the land again. Sometimes we climbed up a solid road, blasted out of the face of the black cliffs, or crept along the shore of the tranquil lagoon, frightening the land-crabs into their holes as they felt the shake of the approaching carriage. Palms and passiflora abounded, the latter being specially magnificent. It seems wonderful how their thin stems can support, at a height of thirty or forty feet from the ground, the masses of huge orange-coloured fruit which depend in strings from their summits.

At the third river, not far from where it fell into the sea, we thought it was time to lunch; so we stopped the carriage, gave the horses their provender, and sat down to enjoy ourselves after our long drive. It was early in the afternoon before we started again, and soon after this we were met by fresh horses, sent out from Papenoo;¹ so it was not long before we found ourselves near Point Venus, where we once more came upon a good piece of road, down which we rattled to the plains outside Papeete.

We reached the quay at about seven o'clock, and, our arrival having been observed, several friends came to see us and to inquire how we had fared. Before we started on our excursion, instructions had been given that the 'Sunbeam' should be painted *white*, for the sake of cool-

¹ From 'pape,' *water*, and 'noo,' *abundance*.

ness, and we were all very curious to see how she would look in her new dress ; but unfortunately the wet weather has delayed the work, and there is still a good deal to do.

Wednesday, December 6th.—It was raining fast at half-past four this morning, which was rather provoking, as I wanted to take some photographs from the yacht's deck before the sea-breeze sprang up. But the weather cleared while I was choosing my position and fixing my camera, and I was enabled to take what I hope may prove to be some successful photographs.

Messrs. Brander's mail-ship, a sailing vessel of about 600 tons, was to leave for San 'Francisco at eight o'clock, and at seven Tom started in the 'Flash' to take our letters on board. The passage to San Francisco occupies twenty-five days on an average, and is performed with great regularity once a month each way. The vessels employed on this line, three in number, are well built, and have good accommodation for passengers, and they generally carry a full cargo.

So brisk is the trade carried on between Tahiti and the United States, that the cost of this vessel was more than covered by the freights the first year after she was built. In addition to these ships, there are those which run backwards and forwards to Valparaiso, and the little island trading schooners ; so that the Tahitians can boast of quite a respectable fleet of vessels, not imposing perhaps in point of tonnage, but as smart and serviceable-looking as could be desired. The trading schooners are really beautiful little craft, and I am sure that, if well kept and properly manned, they would show to no discredit among our smart yachts at Cowes. Not a day passes without one or more entering or leaving the harbour, returning from or bound to the lonely isles with which the south-west portion of the Pacific is studded. They are provided with a patent log, but their captains, who are intelligent

men, do not care much about a chronometer, as the distances to be run are comparatively short and are easily judged.

Mr. Godeffroy gave us rather an amusing account of the manner in which their negotiations with the natives are conducted. The more civilised islanders have got beyond barter, and prefer hard cash in American dollars for their pearls, shells, cocoa-nuts, sandal-wood, &c. When they have received the money, they remain on deck for some time discussing their bargains among themselves. Then they peep down through the open skylights into the cabin below, where the most attractive prints and the gaudiest articles of apparel are temptingly displayed, alongside a few bottles of rum and brandy and a supply of tobacco. It is not long before the bait is swallowed; down go the natives, the goods are sold, and the dollars have once more found their way back into the captain's hands.

I had a long talk with one of the natives, who arrived to-day from Flint Island—a most picturesque-looking individual, dressed in scarlet and orange-coloured flannel, and a mass of black, shiny, curly hair. Flint Island is a place whose existence has been disputed, it having been more than once searched for by ships in vain. It was, therefore, particularly interesting to meet some one who had actually visited, and had just returned from, the spot in question. That islands do occasionally disappear entirely in these parts there can be little doubt. The Tahitian schooners were formerly in the habit of trading with a small island close to Rarotonga, whose name I forget; but about four years ago, when proceeding thither with the usual three-monthly cargo of provisions, prints, &c., they failed to find the island, of which no trace has since been seen. Two missionaries from Rarotonga are believed to have been on it at the time of its disappearance, and to have shared its mysterious fate.

After breakfast, we landed, and went to see Messrs. Brander's stores, where all sorts of requisites for fitting out ships and their crews can be procured. It is surprising to find how plentiful are the supplies of the necessaries and even the luxuries of civilised life in this far-away corner of the globe. You can even get *ice* here, for the manufacture of which a retired English infantry officer has set up an establishment with great success. But what interested me most were the products of this and the neighbouring islands. There were tons of exquisitely tinted pearl shells, six or eight inches in diameter, formerly a valuable article of commerce, but now worth comparatively little. The pearls that came out of them had unfortunately been sent away to Liverpool—1,000*l.* worth by this morning's, and 5,000*l.* by the last mail-ship. Then there was vanilla, a most precarious crop, which needs to be carefully watered and shaded from the first moment it is planted, and which must be gathered before it is ripe, and dried and matured in a moist heat, between blankets and feather-beds, in order that the pods may not crack and allow the essence to escape. We saw also edible fungus, exported to San Francisco, and thence to Hong Kong, solely for the use of the Chinese; tripang, or *bêche-de-mer*, a sort of sea-slug or holothuria, which, either living or dead, fresh or dried, looks equally untempting, but is highly esteemed by the Celestials; coprah, or dried cocoa-nut kernels, broken into small pieces in order that they may stow better, and exported to England and other parts, where the oil is expressed and oil-cake formed; and various other articles of commerce. The trade of the island is fast increasing, the average invoice value of the exports having risen from 8,400*l.* in 1845 to 98,000*l.* in 1874. These totals are exclusive of the value of the pearls, which would increase it by at least another 3,000*l.* or 4,000*l.*

Friday, December 8th.—I persuaded Tom to make another excursion to the coral reef this morning, and at five o'clock we set off in the 'Flash,' just as the sun was rising. We had a delightful row, past the Quarantine Island, to the portion of the reef on the other side of the harbour, where we had not yet been, and where I think the coral plants and flowers and bushes showed to greater advantage than ever, as they were less crowded, and the occasional patches of sandy bottom enabled one to see them better. We paid a brief visit to Point Venus, whence Captain Cook observed the transit of Venus on November 9th, 1769, and we saw the light-house and tamarind tree, which now mark the spot. The latter, from which we brought away some seed, was undoubtedly planted by Captain Cook with his own hand.

Later in the day, we drove to Faataua. The grand piano, every table, and the drawing-room floor, were spread with the presents we were expected to take away with us. There were bunches of scarlet feathers, two or three hundred in number, from the tail of the tropic bird, which are only allowed to be possessed and worn by chiefs, and which are of great value, as each bird produces only two feathers; pearl shells, with corals growing on them, red coral from the islands on the Equator, curious sponges and sea-weed, *tapa* cloth and *reva-reva* fringe, arrowroot and palm-leaf hats, cocoa-nut drinking-vessels, fine mats plaited in many patterns, and other specimens of the products of the island.

All the members of the royal family at present in Tahiti had been invited to meet us, and arrived in due course, including the heir-apparent and his brother and sister. All the guests were dressed in the native costume, with wreaths on their heads and necks, and even the servants—including our own, whom I hardly recognised—were similarly decorated.

When the feast was ready, the Prince offered me his arm, and we all walked in a procession to a grove of bananas in the garden through two lines of native servants, who, at a given signal, saluted us with three hearty English cheers. We then continued our walk till we arrived at a house, built in the native style, by the side of a rocky stream, like a Scotch burn. The uprights of the house were banana trees, transplanted with their leaves on, so as to shade the roof, which was formed of plaited cocoa-nut palm-leaves, each about fifteen feet long, laid transversely across bamboo rafters. From these light green supports and the dark green roof depended the yellow and brown leaves of the *theve*, woven into graceful garlands and elegant festoons. The floor was covered with the finest mats, with black and white borders, and the centre strewn with broad green plantain leaves, to form the tablecloth, on which were laid baskets and dishes, made of leaves sewed together, and containing all sorts of native delicacies. There were oysters, lobsters, wurruli, and crawfish, stewed chicken, boiled sucking-pig, plantains, bread-fruit, melons, bananas, oranges, and strawberries. Before each guest was placed a half cocoa-nut full of salt water, another full of chopped cocoa-nut, a third full of fresh water, and another full of milk, two pieces of bamboo, a basket of *poi*, half a bread-fruit, and a platter of green leaves, the latter being changed with each course. We took our seats on the ground round the green table. An address was first delivered in the native language, grace was then said, and we commenced. The first operation was to mix the salt water and the chopped cocoa-nut together, so as to make an appetising sauce, into which we were supposed to dip each morsel we ate, the empty salt-water bowl being filled up with fresh water with which to wash our fingers and lips. We were tolerably successful in the use of our

fingers as substitutes for knives and forks. The only drawback was that the dinner had to be eaten amid such a scene of novelty and beauty, that our attention was continually distracted : there was so much to admire, both in the house itself and outside it. After we had finished, all the servants sat down to dinner, and from a dais at one end of the room we surveyed the bright and animated scene, the gentlemen—and some of the ladies too—meanwhile enjoying their cigarettes.

When we got down to Papeete, at about half-past four, so many things had to be done that it seemed impossible to accomplish a start this evening. At six o'clock the pilot sent word that it was no longer safe to go out ; but steam was already up, and Tom therefore decided to go outside the reef and there wait for the people and goods that were still on shore. They were soon on board, the anchor was raised, and we began to steam slowly ahead, taking a last regretful look at Papeete as we left the harbour. By the time we were outside it was dark, the pilot went ashore, and we steamed full speed ahead. After dinner, and indeed until we went to bed, at half-past eleven, the lights along the shore were clearly visible, and the form of the high mountains behind could be distinguished.

CHAPTER XV.

TAHITI TO SANDWICH ISLANDS.—KILAUEA BY DAY AND
BY NIGHT.

*Methinks it should have been impossible
Not to love all things in a world so filled,
Where the breeze warbles, and the mute still air
Is music, slumbering on her instrument.*

Saturday, December 9th.—After leaving the harbour of Papeete we passed close to the island of Eimeo, on which we have gazed so often and with so much pleasure during the past week. It is considered the most beautiful island of the Georgian group, and we all regretted that we were unable to spare the time to visit it. From afar it is rather like the dolomite mountains in the Tyrol, and it is said that the resemblance is even more striking on a near approach. The harbour is a long narrow gorge between high mountains, clothed with palms, oranges, and plantains, and is one of the most remarkable features of the place. Huahine is the island of which the Earl and the Doctor speak, in 'South Sea Bubbles,' in terms of such enthusiasm, and Rarotonga is the head and centre of all the missionary efforts of the present time in these parts.

The weather to-day was fine, though we had occasional squalls of wind and rain.

Sunday, December 10th.—Another squally day. Still close-hauled, and even then not on our course.

Monday, December 11th.—Very like yesterday. We passed close to Flint and Vostok Islands, at the former of which I should have much liked to land. But it was a good deal to leeward of us; there is no anchorage, and the landing, which is always difficult and sometimes impossible, has to be effected in native surf-boats. It would have been interesting to see a guano island, of which this is a perfect specimen.

We had hoped to make the Caroline Islands before dark (not the Caroline Islands proper, but a group of low islets, whose position is very uncertainly indicated in the different charts and books); but the wind fell light, and as we could see nothing of them at sunset, although the view from the masthead extended at least fifteen miles in every direction, it was decided at eight o'clock to put the ship about, to insure not running on them or any of the surrounding reefs in the night. The currents run very swiftly between these islands, and it is impossible to tell your exact position, even a few hours after having taken an observation.

Tuesday, December 12th.—The wind freshened immediately after we had changed our course last night, and fell light directly we had put about again this morning, so that it was fully 9 a.m. before we had regained our position of yesterday evening.

Our compass-cards were getting worn out, and Tom gave out new ones before leaving Tahiti. I was very much amused to-night, when, as usual, just before going to bed, I went to have a look at the compass and see how the yacht was lying, and asked the man at the wheel what course he was steering. 'North and by west, half-east, ma'am,' he replied. 'That's a funny course,' I said; 'tell me again.' He repeated his statement; whereupon I remarked that the course was quite a new one to me. 'Oh, yes, ma'am,' he answered, 'but them's the new

compass-cards.' This man is one of the best helmsmen in the ship, but certainly seems to be an indifferent scholar.

Friday, December 15th.—We crossed the line at half-past four this morning

Saturday, December 16th.—It had fallen calm yesterday evening, and the funnel was raised at midnight, but the breeze sprang up again to-day, and at noon the fires were banked and the sails were set. Of course it then fell calm again, and at six o'clock we were once more proceeding under steam. There was one squall in the night, accompanied by the most tremendous rain I ever saw or heard. We talk of tropical rain in England, but the real thing is very different. It seemed just as if the bottom of an enormous cistern overhead had suddenly been removed, allowing the contents to fall exactly on the spot where we were. The water came down in sheets, and was soon three or four inches deep on the deck, though it was pouring out of the scuppers all the time as fast as possible.

Monday, December 18th.—We were close-hauled with a strong north-east wind, and heavy squalls and showers at intervals. We saw several flying-fish and a good many birds, apparently hovering over a shoal of whales or grampuses. It is wonderful how little life we have seen on this portion of our voyage.

Friday, December 22nd.—At 6.30 a.m. we made the island of Hawaii, rather too much to leeward, as we had been carried by the strong current at least eighteen miles out of our course. We were therefore obliged to beat up to windward, in the course of which operation we passed a large barque running before the wind—the first ship we had seen since leaving Tahiti—and also a fine whale, blowing, close to us. We could not see the high land in the centre of the island, owing to the mist in which it was enveloped, and there was great excitement and much

speculation on board as to the principal points which were visible. At noon the observations taken proved that Tom was right in his opinion as to our exact position. The wind dropped as we approached the coast, where we could see the heavy surf dashing against the black lava cliffs, rushing up the little creeks, and throwing its spray in huge fountain-like jets high above the tall cocoa-nut trees far inland.

We sailed along close to the shore, and by two o'clock were near the entrance to the Bay of Hilo. In answer to our signal for a pilot a boat came off with a man who said he knew the entrance to the harbour, but informed us that the proper pilot had gone to Honolulu on a pleasure trip.

It was a clear afternoon. The mountains, Mauna Kea and Mauna Loa, could be plainly seen from top to bottom, their giant crests rising nearly 14,000 feet above our heads, their trees and fern-clad slopes seamed with deep gulches or ravines, down each of which a fertilising river ran into the sea. Inside the reef, the white coral shore, on which the waves seemed too lazy to break, is fringed with a belt of cocoa-nut palms, amongst which, as well as on the hill-sides, the little white houses are prettily dotted. All are surrounded by gardens, so full of flowers that the bright patches of colour were plainly visible even from the deck of the yacht. The harbour is large, and is exposed only to one bad wind, which is most prevalent during the winter months. Still, with good ground-tackle, there is not much to be feared, and there is one particular spot, sheltered by the Blonde reef, which is almost always safe. Here, accordingly, we have taken up our station, though it is rather far from the town. Sometimes it is impossible to land at Hilo itself for days together, but there is fortunately a little creek behind Cocoa-nut Island which is always accessible.

This afternoon the weather was all that could be desired, and at three o'clock we landed and went straight to Mr. Conway's store to make arrangements for going to the volcano of Kilauea to-morrow. Mr. Conway sent a man off at once on horseback to warn the people at the 'Half-way House' and at 'Volcano House' to make preparations to receive our party—a necessary precaution, as visitors to the island are not numerous, and can only arrive by the monthly steamer from Honolulu.

Having arranged this matter, we went for a stroll, among neat houses and pretty gardens, to the suspension-bridge over the river, followed by a crowd of girls, all decorated with wreaths and garlands, and wearing almost the same dress that we had seen at Tahiti—a coloured long-sleeved loose gown reaching to the feet. The natives here appear to affect duller colours than those we have lately been accustomed to, lilac, drab, brown, and other dark prints being the favourite tints. Whenever I stopped to look at a view, one of the girls would come behind me and throw a *lei* of flowers over my head, fasten it round my neck, and then run away laughing, to a distance, to judge the effect. The consequence was that, before the end of our walk, I had about a dozen wreaths, of various colours and lengths, hanging round me, till I felt almost as if I had a fur tippet on, they made me so hot; and yet I did not like to take them off for fear of hurting the poor girls' feelings.

We walked along the river bank, and crossed to the other side just below the rapids, jumping over the narrow channels through which the water hurried and rushed. Some of our attendant girls carried Muriel and the dogs, and, springing barefooted from rock to rock, led us across the stream and up the precipitous banks on the other side. Before we got back to the yacht it had become dark, the moon had risen, and we could see the reflection in the sky

of the fires in the crater of Kilauea. I hope the volcano may be active to-morrow. It is never two days in the same condition, and visitors have frequently remained in the neighbourhood of the crater for a week without seeing an eruption.

The starlit sky, the bright young moon, and the red cloud from Kilauea, floating far above our heads, made up a most beautiful scene from the deck of the 'Sunbeam.'

Saturday, December 23rd.—We had an early breakfast, and landed, in readiness for our excursion to Kilauea. The baggage animals ought already to have started, but we found they had been kept back, in case we should happen to forget anything. Quite a crowd assembled to see us off, and a good deal of gossip had to be got through, so that it was half-past nine before we were all mounted and fairly off.

The first part of our way lay along the flat ground, gay with bright scarlet Guernsey lilies, and shaded by cocoa-nut trees, between the town and the sea. Then we struck off to the right, and soon left the town behind us, emerging into the open country. At a distance from the sea, Hilo looks as green as the Emerald Isle itself; but on a closer inspection the grass turns out to be coarse and dry, and many of the trees look scrubby and half dead. Except in the 'gulches' and the deep holes between the hills, the island is covered with lava, in many places of so recent a deposit that it has not yet had time to decompose, and there is consequently only a thin layer of soil on its surface. This soil being, however, very rich, vegetation flourishes luxuriantly for a time; but as soon as the roots have penetrated a certain depth, and have come into contact with the lava, the trees wither up and perish, like the seed that fell on stony ground.

The *okia* trees form a handsome feature in the landscape, with their thick tall stems, glossy foliage, and light

crimson flowers. The fruit is a small pink waxy-looking apple, slightly acid, pleasant to the taste when you are thirsty. The candle-nut trees attain to a large size, and their light green foliage and white flowers have a very graceful appearance. Most of the foliage, however, is spoiled by a deposit of black dust, not unlike what one sees on the leaves in a London garden. I do not know whether this is caused by the fumes of the not far-distant volcano, or whether it is some kind of mould or fungus.

After riding about ten miles in the blazing sun we reached a forest, where the vegetation was quite tropical, though not so varied in its beauties as that of Brazil, or of the still more lovely South Sea Islands. There were ferns of various descriptions in the forest, and many fine trees, entwined, supported, or suffocated by numerous climbing plants, amongst which were blue and lilac convolvulus, and magnificent passion-flowers. The protection from the sun afforded by this dense mass of foliage was extremely grateful; but the air of the forest was close and stifling, and at the end of five miles we were glad to emerge once more into the open. The rest of the way lay over the hard lava, through a sort of desert of scrubby vegetation, occasionally relieved by clumps of trees in hollows. More than once we had a fine view of the sea, stretching away into the far distance, though it was sometimes mistaken for the bright blue sky, until the surf could be seen breaking upon the black rocks, amid the encircling groves of cocoa-nut trees.

The sun shone fiercely at intervals, and the rain came down several times in torrents. The pace was slow, the road was dull and dreary, and many were the inquiries made for the 'Half-way House,' long before we reached it. We had still two miles farther to go, in the course of which we were drenched by a heavy shower. At last we came to a native house, crowded with people, where

they were making *tappa* or *kapa*—the cloth made from the bark of the paper-mulberry. Here we stopped for a few minutes until our guide hurried us on, pointing out the church and the 'Half-way House' just ahead.

We were indeed glad to dismount after our weary ride, and rest in the comfortable rocking-chairs under the verandah. It is a small white wooden building, overhung with orange-trees. A good-looking man was busy broiling beef-steaks, stewing chickens, and boiling *taro*, and we had soon a plentiful repast set before us, with the very weakest of weak tea as a beverage. The woman of the house, which contained some finely worked mats and clean-looking beds, showed us some *tappa* cloth, together with the mallets and other instruments used in its manufacture, and a beautiful orange-coloured *lei*, or feather necklace, which she had made herself. The cloth and mallets were for sale, but no inducement would persuade her to part with the necklace. It was the first she had ever made, and I was afterwards told that the natives are superstitiously careful to preserve the first specimen of their handiwork, of whatever kind it may be.

After our meal we mounted, and set off for the 'Volcano House.' We had not gone far before we were again overtaken by a shower, which once more drenched us to the skin.

The scene was certainly one of extreme beauty. The moon was hidden by a cloud, and the prospect lighted only by the red glare of the volcano, which hovered before and above us like the Israelites' pillar of fire, giving us hopes of a splendid spectacle when we should at last reach the long-wished-for crater. Presently the moon shone forth again, and gleamed and glistened on the rain-drops and silver-grasses till they looked like fireflies and glowworms. At last, becoming impatient, we proceeded slowly on our way, until we met a man on horseback,

who hailed us in a cheery voice with an unmistakable American accent. It was the landlord of the 'Volcano House,' Mr. Kane, who, fearing from the delay that we had met with some mishap, had started to look for us. He explained that he thought it was only his duty to look after and help ladies visiting the volcano, and added that he had intended going down as far as the 'Half-way House' in search of us. It was a great relief to know that we were in the right track, and I quite enjoyed the gallop through the dark forest, though there was barely sufficient light to enable me to discern the horse immediately in front of me. When we emerged from the wood, we found ourselves at the very edge of the old crater, the bed of which, three or four hundred feet beneath us, was surrounded by steep and in many places overhanging sides. It looked like an enormous cauldron, four or five miles in width, full of a mass of cooled pitch. In the centre was the still glowing stream of dark red lava flowing slowly towards us, and in every direction were red-hot patches, and flames and smoke issuing from the ground. A bit of the 'black country' at night, with all the coal-heaps on fire, would give you some idea of the scene. Yet the first sensation is rather one of disappointment, as one expects greater activity on the part of the volcano; but the new crater was still to be seen, containing the lake of fire, with steep walls rising up in the midst of the sea of lava.

Twenty minutes' hard riding brought us to the door of the 'Volcano House,' from which issued the comforting light of a large wood fire, reaching half way up the chimney.

Everything at this inn is most comfortable, though the style is rough and ready. The interior is just now decorated for Christmas, with wreaths, and evergreens, and ferns, and bunches of white plumes, not unlike *reva-reva*, made from the pith of the silver-grass.

The grandeur of the view in the direction of the volcano increased as the evening wore on. The fiery cloud above the present crater grew in size and depth of colour; the extinct crater glowed red in thirty or forty different places; and clouds of white vapour issued from every crack and crevice in the ground, adding to the sulphurous smell with which the atmosphere was laden. Our room faced the volcano: there were no blinds, and I drew back the curtains and lay watching the splendid scene until I fell asleep.

Sunday, December 24th (Christmas Eve).—I was up at four o'clock, to gaze once more on the wondrous spectacle that lay before me. The molten lava still flowed in many places, the red cloud over the fiery lake was bright as ever, and steam was slowly ascending in every direction, over hill and valley, till, as the sun rose, it became difficult to distinguish clearly the sulphurous vapours from the morning mists. We walked down to the Sulphur Banks, about a quarter of a mile from the 'Volcano House,' and burnt our gloves and boots in our endeavours to procure crystals, the beauty of which generally disappeared after a very short exposure to the air. We succeeded, however, in finding a few good specimens, and, by wrapping them at once in paper and cotton-wool and putting them into a bottle, hope to bring them home uninjured.

On our return we found a gentleman who had just arrived from Kau, and who proposed to join us in our expedition to the crater, and at three o'clock in the afternoon we set out, a party of eight, with two guides, and three porters to carry our wraps and provisions, and to bring back specimens. Before leaving the inn the landlord came to us and begged us in an earnest and confidential manner to be very careful, to do exactly what our guides told us, and especially to follow in their footsteps exactly when returning in the dark. He added, 'There

never has been an accident happen to anybody from my house, and I should feel real mean if one did : but there have been a power of narrow escapes.'

First of all we descended the precipice, 300 feet in depth, forming the wall of the old crater, but now thickly covered with vegetation. It is so steep in many places that flights of zig-zag wooden steps have been inserted in the face of the cliff in some places, in order to render the descent practicable. At the bottom we stepped straight on to the surface of cold boiled lava, which we had seen from above last night. Even here, in every crevice where a few grains of soil had collected, delicate little ferns might be seen struggling for life, and thrusting out their green fronds towards the light. It was the most extraordinary walk imaginable over that vast plain of lava, twisted and distorted into every conceivable shape and form, according to the temperature it had originally attained, and the rapidity with which it had cooled, its surface, like half-molten glass, cracking and breaking beneath our feet. Sometimes we came to a patch that looked like the contents of a pot, suddenly petrified in the act of boiling ; sometimes the black iridescent lava had assumed the form of waves, or more frequently of huge masses of rope, twisted and coiled together ; sometimes it was piled up like a collection of organ-pipes, or had gathered into mounds and cones of various dimensions. As we proceeded the lava became hotter and hotter, and from every crack arose gaseous fumes, affecting our noses and throats in a painful manner ; till at last, when we had to pass to leeward of the molten stream flowing from the lake, the vapours almost choked us, and it was with difficulty we continued to advance. The lava was more glassy and transparent-looking, as if it had been fused at a higher temperature than usual ; and the crystals of sulphur, alum, and other minerals, with which it abounded, reflected the

light in bright prismatic colours. In places it was quite transparent, and we could see beneath it the long streaks of a stringy kind of lava, like brown spun glass, called 'Pélé's hair.'

At last we reached the foot of the present crater, and began the ascent of the outer wall. Many times the thin crust gave way beneath our guide, and he had to retire quickly from the hot, blinding, choking fumes that immediately burst forth. But we succeeded in reaching the top; and then what a sight presented itself to our astonished eyes! I could neither speak nor move at first, but could only stand and gaze at the horrible grandeur of the scene.

We were standing on the extreme edge of a precipice, overhanging a lake of molten fire, a hundred feet below us, and nearly a mile across. Dashing against the cliffs on the opposite side, with a noise like the roar of a stormy ocean, waves of blood-red, fiery, liquid lava hurled their billows upon an iron-bound headland, and then rushed up the face of the cliffs to toss their gory spray high in the air. The restless, heaving lake boiled and bubbled, never remaining the same for two minutes together. Its normal colour seemed to be a dull dark red, covered with a thin grey scum, which every moment and in every part swelled and cracked, and emitted fountains, cascades, and whirlpools of yellow and red fire, while sometimes one big golden river, sometimes four or five, flowed across it. There was an island on one side of the lake, which the fiery waves seemed to attack unceasingly with relentless fury, as if bent on hurling it from its base. On the other side was a large cavern, into which the burning mass rushed with a loud roar, breaking down in its impetuous headlong career the gigantic stalactites that overhung the mouth of the cave, and flinging up the liquid material for the formation of fresh ones.

It was all terribly grand, magnificently sublime ; but no words could adequately describe such a scene. The precipice on which we were standing overhung the crater so much that it was impossible to see what was going on immediately beneath ; but from the columns of smoke and vapour that arose, the flames and sparks that constantly drove us back from the edge, it was easy to imagine that there must have been two or three grand fiery fountains below. As the sun set, and darkness enveloped the scene, it became more awful than ever. We retired a little way from the brink, to breathe some fresh air, and to try and eat the food we had brought with us ; but this was an impossibility. Every instant a fresh explosion or glare made us jump up to survey the stupendous scene. The violent struggles of the lava to escape from its fiery bed, and the loud and awful noises by which they were at times accompanied, suggested the idea that some imprisoned monsters were trying to release themselves from their bondage, with shrieks and groans, and cries of agony and despair, at the futility of their efforts.

Sometimes there were at least seven spots on the borders of the lake where the molten lava dashed up furiously against the rocks—seven fire-fountains playing simultaneously. With the increasing darkness the colours emitted by the glowing mass became more and more wonderful, varying from the deepest jet black to the palest grey, from darkest maroon, through cherry and scarlet, to the most delicate pink, violet, and blue : from the richest brown, through orange and yellow, to the lightest straw-colour. And there was yet another shade, only describable by the term ‘molten-lava colour.’ Even the smokes and vapours were rendered beautiful by their borrowed lights and tints, and the black peaks, pinnacles, and crags, which surrounded the amphitheatre, formed a splendid and appropriate background. Sometimes great pieces broke off and

A. I. B.

LAKE OF FIRE BY NIGHT.

tumbled with a crash into the burning lake, only to be remelted and thrown up anew. I had for some time been feeling very hot and uncomfortable, and on looking round the cause was at once apparent. Not two inches beneath the surface, the grey lava on which we were standing and sitting was red-hot. A stick thrust through it caught fire, a piece of paper was immediately destroyed, and the gentlemen found the heat from the crevices so great that they could not approach near enough to light their pipes.

One more long last look, and then we turned our faces away from the scene that had enthralled us for so many hours. The whole of the lava we had crossed, in the extinct crater, was now aglow in many patches, and in all directions flames were bursting forth, fresh lava was flowing, and steam and smoke were issuing from the surface. It was a toilsome journey back again, walking as we did in single file, and obeying the strict injunctions of our head guide to follow him closely, and to tread exactly in his footsteps. On the whole it was easier by night than by day to distinguish the route to be taken, as we could now see the dangers that before we could only feel; and many were the fiery crevices we stepped over or jumped across. Once I slipped, and my foot sank through the thin crust. Sparks issued from the ground, and the stick on which I leant caught fire before I could fairly recover myself.

It was half-past eleven when we once more found ourselves beneath Mr. Kane's hospitable roof; he had expected us to return at nine o'clock, and was beginning to feel anxious about us.

Monday, December 25th (Christmas Day).—Turning in last night was the work of a very few minutes, and this morning I awoke perfectly refreshed and ready to appreciate anew the wonders of the prospect that met my eyes. The pillar of fire was still distinctly visible when I looked

out from my window, though it was not so bright as when I had last seen it; but even as I looked it began to fade, and gradually disappeared. At the same moment a river of glowing lava issued from the side of the bank we had climbed with so much difficulty yesterday, and slowly but surely overflowed the ground we had walked over. You may imagine the feelings with which we gazed upon this startling phenomenon, which, had it occurred a few hours earlier, might have caused the destruction of the whole party. If our expedition had been made to-day instead of yesterday, we should certainly have had to proceed by a different route to the crater, and should have looked down on the lake of fire from a different spot.

I cannot hope that in my attempt to give you some idea of Kilauea as we beheld it, I shall be successful in conveying more than a very faint impression of its glories. I feel that my description is so utterly inadequate, that, were it not for the space, I should be tempted to send you in full the experiences of previous visitors, as narrated in Miss Bird's 'Six Months in the Sandwich Islands,' and Mr. Bodham Whetham's 'Pearls of the Pacific.' The account contained in the former work I had read before arriving here; the latter I enjoyed at the 'Volcano House.' Both are well worth reading by any one who feels an interest in the subject.

It would, I think, be difficult to imagine a more interesting and exciting mode of spending Christmas Eve than yesterday has taught us, or a stranger situation in which to exchange our Christmas greetings than beneath the grass roof of an inn on the edge of a volcano in the remote Sandwich Islands. If we had seen nothing but Kilauea since we left home, we should have been well rewarded for our long voyage.

At seven o'clock we were prepared for a start. The canter over the dewy grass, in the fresh morning air, was

most invigorating. It was evident that no one had passed along the road since Saturday night, for we picked up several waifs and strays dropped in the dark on our way up—a whip, a stirrup, mackintosh hood, &c.

By half-past ten we had reached the 'Half-way House,' where we were not expected so early, and where we had ample opportunity to observe the native ways of living, while waiting for our midday meal.

The rest of the ride down to Hilo was as dull and monotonous as our upward journey had been. At last we reached the pier, where we found the usual little crowd waiting to see us off. The girls who had followed us when we first landed came forward shyly when they thought they were unobserved, and again encircled me with *leis* of gay and fragrant flowers. The custom of decorating themselves with wreaths on every possible occasion is in my eyes a charming one, and I like the inhabitants of Polynesia for their love of flowers. They are as necessary to them as the air they breathe, and I think the missionaries make a mistake in endeavouring to repress so innocent and natural a taste.

I think at least half the population of Hilo had been on board the yacht in the course of the day, as a Christmas treat. At last we took a boat and went off too, accompanied by Mr. Lyman. The appearance of the 'Sunbeam' from the shore was very gay, and as we approached it became more festive still. All her masts were tipped with sugar-canes in bloom. Her stern was adorned with flowers, and in the arms of the figure-head was a large bouquet. She was surrounded with boats, the occupants of which cheered us heartily as we rowed alongside. The whole deck was festooned with tropical plants and flowers, and the decorations of the cabins were even more beautiful and elaborate. I believe all hands had been hard at work ever since we left to produce this wonderful effect, and

every garden in Hilo had furnished a contribution to please and surprise us on our return.

The choir from Hilo came out in boats in the evening, sang all sorts of songs, sacred and secular, and cheered everybody till they were hoarse. After this, having had a cold dinner, in order to save trouble, and having duly drunk the health of our friends at home, we all adjourned to the saloon, to assist in the distribution of some Christmas presents, a ceremony which afforded great delight to the children, and which was equally pleasing to the elder people and to the crew, if one may judge from their behaviour on the occasion.

Then we sat on deck, gazing at the cloud of fire over Kilauea, and wondering if the appearance of the crater could ever be grander than it was last night, when we were standing on its brim.

So ended Christmas Day, 1876, at Hilo, in Hawaii.

CHAPTER XVI.

HAWAIIAN SPORTS.

*In wrestling nimble, and in running swift,
In shooting steady, and in swimming strong,
Well made to strike, to leap, to throw, to lift,
And all the sports that shepherds are among.*

Tuesday, December 26th.—We went ashore at eight o'clock, and found Mr. Lyman already waiting for us. Two baggage-mules were sent off with the photographic apparatus, and all the materials for breakfast, to the Rainbow Falls.

Before setting out for the Falls ourselves, we went to see the national sport of surf-swimming, for their skill in which the Hawaiians are so justly famed.

The natives have many other games of which they are very fond, and which they play with great skill, including spear-throwing, transfixing an object with a dart, *kona*, an elaborate kind of draughts, and *taluu*, which consists in hiding a small stone under one of five pieces of cloth, placed in front of the players. One hides the stone, and the others have to guess where it is; and it generally happens, that however dexterously the hider may put his arm beneath the cloth, and dodge about from one piece to another, a clever player will be able to tell, by the movement of the muscles of the upper part of his arm, when his fingers relax their hold of the stone. Another game.

called *parua*, is very like the Canadian sport of 'tobogganing,' only that it is carried on on the grass instead of on the snow. The performers stand bolt upright on a narrow plank, turned up in front, and steered with a sort of long paddle. They go to the top of a hill or mountain, and rush down the steep, grassy, sunburnt slopes at a tremendous pace, keeping their balance in a wonderful manner. There is also a very popular amusement, called *pahé*, requiring a specially prepared smooth floor, along which the javelins of the players glide like snakes. On the same floor they also play at another game, called *maita*, or *uru maita*. Two sticks, only a few inches apart, are stuck into the ground, and at a distance of thirty or forty yards the players strive to throw a stone between them. The *uru* which they use for the purpose is a hard circular stone, three or four inches in diameter, and an inch in thickness at the edge, but thicker in the middle.

Mr. Ellis, in his 'Polynesian Researches,' states that 'these stones are finely polished, highly valued, and carefully preserved, being always oiled or wrapped up in native cloth after having been used. The people are, if possible, more fond of this game than of the *pahé*, and the inhabitants of a district not unfrequently challenge the people of the whole island, or the natives of one island those of all the others, to bring a man who shall try his skill with some favourite player of their own district or island. On such occasions seven or eight thousand people, men and women, with their chiefs and chiefesses, assemble to witness the sport, which, as well as the *pahé*, is often continued for hours together.'

With bows and arrows they are as clever as all savages, and wonderfully good shots, attempting many wonderful feats. They are swift as deer, when they choose, though somewhat lazy and indolent. All the kings and chiefs have been special adepts in the invigorating pastime of

surf-swimming, and the present king's sisters are considered first-rate hands at it. The performers begin by swimming out into the bay, and diving under the huge Pacific rollers, pushing their surf-boards—flat pieces of wood, about four feet long by two wide, pointed at each end—edgewise before them. For the return journey they select a large wave; and then, either sitting, kneeling, or standing on their boards, rush in shorewards with the speed of a race-horse, on the curling crest of the monster, enveloped in foam and spray, and holding on, as it were, by the milk-white manes of their furious coursers. It looked a most enjoyable amusement, and I should think that to a powerful swimmer, with plenty of pluck, the feat is not difficult of accomplishment. The natives here are almost amphibious. They played all sorts of tricks in the water, some of the performers being quite tiny boys. Four strong rowers took a whale-boat out into the worst surf, and then, steering her by means of a large oar, brought her safely back to the shore on the top of a huge wave.

After the conclusion of this novel entertainment, we all proceeded on horseback to the Falls. After a couple of miles we dismounted, and had a short walk through grass and ferns to a pretty double waterfall, tumbling over a cliff, about 100 feet high, into a glassy pool of the river beneath. It fell in front of a fern-filled black lava cavern, over which a rainbow generally hangs. As it was too wet to sit on the grass after the rain, we took possession of the verandah of a native house, commanding a fine view of the bay and town of Hilo.

After taking a few photographs it was time to return; and we next went to a pretty garden, which we had seen on the night of our arrival, and, tying up our horses outside, walked across it to the banks of the river. Here we found a large party assembled, watching half the popula-

tion of Hilo disporting themselves in, upon, and beneath the water. They climbed the almost perpendicular rocks on the opposite side of the stream, took headers, and footers, and siders from any height under five-and-twenty feet, dived, swam in every conceivable attitude, and without any apparent exertion, deep under the water, or upon its surface. But all this was only a preparation for the special sight we had come to see. Two natives were to jump from a precipice, 100 feet high, into the river below, clearing on their way a rock which projected some twenty feet from the face of the cliff, at about the same distance from the summit. The two men, tall, strong, and sinewy, suddenly appeared against the sky-line, far above our heads, their long hair bound back by a wreath of leaves and flowers, while another garland encircled their waists. Having measured their distance with an eagle's glance, they disappeared from our sight, in order to take a run and acquire the necessary impetus. Every breath was held for a moment, till one of the men reappeared, took a bound from the edge of the rock, turned over in mid-air, and disappeared feet foremost into the pool beneath, to emerge almost immediately, and to climb the sunny bank as quietly as if he had done nothing very wonderful. His companion followed, and then the two clambered up to the twenty feet projection, to clear which they had had to take such a run the first time, and once more plunged into the pool below. The feat was of course an easier one than the first; but still a leap of eighty feet is no light matter. A third native, who joined them in this exploit, gave one quite a turn as he twisted in his downward jump; but he also alighted in the water feet foremost, and bobbed up again directly, like a cork. He was quite a young man, and we afterwards heard that he had broken several ribs not more than a year ago, and had been laid up for six months in the hospital.

LEAP AT HILO.

A. Y. B.

a sort of basket dropped into the water between them, to enable them to carry their fish alive. They are not very common now, and we were therefore fortunate in meeting with one. Mr. Lyman made the men in charge turn her round, so as to afford us an opportunity of thoroughly examining her. In the time of Kamehameha there was a fleet of 10,000 of these canoes, and the king used to send them out in the roughest weather, and make them perform all sorts of manœuvres.

We found the yacht in the usual state of confusion incidental to a fresh departure; but everything was soon reduced to order, and off we started to steam and sail round the north end of the island. We could not afford time to visit the place of Captain Cook's death and burial in Keelakeakua Bay. I believe there is not a great deal to see, however, and the spot is chiefly interesting from its associations. For many years a copper plate, fixed to a cocoa-nut tree, marked the spot where Cook fell; but this has now been replaced by a monument, the cost of which was defrayed by subscriptions at Honolulu. Maui is, I believe, a charming place, containing many fine plantations, and several gentlemen's estates, laid out in the English style. Unfortunately, time forbids our accepting some invitations we have received to visit the island, where a great many interesting excursions may be made.

At Kahoolawe there does not seem much to be seen. It was purchased some years ago, and pays well as a sheep-run. Lanai, the next island, is scarcely inhabited, and its scenery is not remarkable.

A sad interest attaches to the island of Molokai, which is situated midway between Maui and Oahu. It is the leper settlement, and to it all the victims of this terrible, loathsome, and incurable disease, unhappily so prevalent in the Hawaiian archipelago, are sent, in order

to prevent the spread of the contagion. They are well cared for and looked after in every way; but their life, separated as they inevitably are from all they hold most dear, and with no prospect before them but that of a slow and cruel death, must indeed be a miserable one. In Molokai there are many tiny children, fatherless and motherless, parents without children, husbands without wives, wives without husbands, 'all condemned,' as Miss Bird says, 'to watch the repulsive steps by which each of their doomed fellows goes down to a loathsome death, knowing that by the same they too must pass.' A French priest has nobly devoted himself to the religious and secular instruction of the lepers, and up to the present time has enjoyed complete immunity from the disease; but even if he escapes this danger, he can *never* return to his country and friends. When one thinks what that implies, and to what a death in life he has condemned himself for the sake of others, it seems impossible to doubt that he will indeed reap a rich reward hereafter.

At two o'clock we saw Diamond Head, the easternmost headland of Oahu, rising from the sea. By four o'clock we were abreast of it, and steaming along the coast. The cape itself rises grandly from the midst of a grove of cocoa-nuts, and the shore all along, with the sharp high mountains of the Pali as a background, is fine and picturesque. A coral reef stretches far into the sea, and outside this we lay waiting for a pilot to take us into Honolulu Harbour.

It was a long business mooring us by hawsers, from our stem and stern, but we were at last safely secured in a convenient place, at a short distance from the shore, where we should be refreshed by the sea breeze and the land breeze alternately.

Thursday, December 28th.—We went ashore at seven o'clock to make arrangements for repairing our mizen-

sail. We soon found a sailmaker, who promised to set all hands to work and complete the job as quickly as possible. Being detained by a heavy shower of rain, we occupied the time in a gossip about Honolulu and its sayings and doings. When the shower was over, we walked through the town, which is clean and tidy, being laid out in squares, after the American style. The houses are all of wood, and generally have verandahs overhanging the street. They are seldom more than one story high, and nearly all have a little greenery about them.

We returned to the yacht for breakfast, and, having heard that no sharks ever came into the long, narrow bay, were able to enjoy, in perfect peace of mind, the luxury of a bath overboard. It is a great pity that in the tropics, where bathing is such a delightful occupation, and where one might swim and paddle about for hours without fear of getting cold, it is often impossible even to enter the water for fear of the sharks. The natives are such expert swimmers that they do not seem to think much of this danger. As the shark turns on his back to take a bite at them, they dive underneath him, and he snaps his jaws on emptiness. In fact, sometimes the swimmer will take advantage of the opportunity to stab his enemy as he passes beneath him.

We lunched on shore, and afterwards went with Mr. Chambré, navigating-lieutenant of H.M.S. 'Fantôme,' to the new Government buildings. There we found an excellent English library, and an interesting collection of books printed in English and Hawaiian, on alternate pages, including alphabets, grammars, the old familiar nursery tales, &c. There is also a good, though small, museum, containing specimens of beautiful corals, shells, seaweeds, and fossils; all the ancient native weapons, such as bows, arrows, swords, and spears—now, alas! no longer procurable—sling-stones, and stones used in games, back-

scratchers, hair-ornaments made of sharks' teeth, tortoise-shell cups and spoons, calabashes and bowls. There were some most interesting though somewhat horrible necklaces made of hundreds of braids of human hair cut from the heads of victims slain by the chiefs themselves. From these braids was suspended a monstrous hook carved from a large whale's tooth, called a Paloola, regarded by the natives as a sort of idol. There are models of ancient and modern canoes—the difference between which is not very great,—paddles inlaid with mother-of-pearl, old war-masks, and dresses still in use in the less frequented islands, anklets of human teeth, and many other things far too numerous to mention. The most interesting of all were, perhaps, the old feather war cloaks, like the ancient *togas* of the Romans. They are made of thousands of yellow, red, and black feathers, of the *oo*, *mamo*, and *eine*, taken singly and fastened into a sort of network of string, so as to form a solid fabric, like the richest velvet or plush, that glitters like gold in the sunlight. The helmets, made of the same feathers, but worked on to a frame of perfect Grecian shape, similar to those seen in the oldest statuary or on the Elgin marbles, are even more artistic and elegant. Whence came the idea and design? Untutored savages could scarcely have evolved them out of their own heads. Some element of civilisation, and of highly artistic civilisation too, must surely have existed among them at some remote period of their history.

Friday, December 29th.—The King's two sisters came to call on us in the morning with their respective husbands. We had a great many visitors all the morning, till it was time to go to lunch; after which we went to call on the Princess Likelike, who drove me to Waikiki, to see her sister, the Princess Kamakaeha, at her country residence, a very large native grass house, with an enor-

mous verandah. Both ladies are married to Englishmen, and live partly in English style. The sunset, over Diamond Head, and the sea, which was just visible through the cocoa-nut trees, was splendid.

It had been quite dark for some time, when the Princess Likelike dropped me at the hotel at half-past seven. It was a fine clear night, with an almost full moon. The streets were full of equestrians, riding about in pairs, for there was to be a great riding party up to the Pali to-night, the *rendezvous* for which was in Emma Square. Every lady had to select and bring with her an attendant cavalier. There are no side-saddles in any of these islands; all the ladies ride like men, and sit their horses very well. The effect of a large party galloping along, with wreaths and garlands in their hats and necks, and with their long skirts floating in the wind, is therefore picturesque and strange in the extreme.

Saturday, December 30th.—Mabelle, Muriel, and I, were up early, and went off to the coral-reef before seven in the 'Flash.' It is very beautiful, but not so fine as those we have already seen at Tahiti and other South Sea Islands. We collected four or five distinct varieties of coral, and saw many marvellous creatures swimming about or sticking to the rocks. There were several canoes full of natives fishing, who appeared highly amused when we ran aground on a coral tree, as happened more than once. It was a pleasant way of spending the early morning in the bright sunshine, peering into the dark blue and light green depths below.

Saturday is a half-holiday in Oahu, and all the plantation and mill hands came galloping into Honolulu on horseback, chattering and laughing, dressed in the brightest colours, and covered with flowers. The latter are not so plentiful nor so beautiful as in Tahiti, but still, to our English eyes, they appear very choice. For fruit, too,

we have been spoilt in the South Seas. The fish-market here, however, is unrivalled.

Fish—raw or cooked—is the staple food of the inhabitants, and almost everybody we saw had half-a-dozen or more brilliant members of the finny tribe, wrapped up in fresh green banana leaves, ready to carry home. Shrimps, which are abundant and good, are caught both in salt and fresh water.

From the fish-market we went to the prison, a large and apparently admirably managed establishment, built of stone, and overlooking the harbour. After a pleasant drive along shady fragrant roads, we returned to Emma Square, to hear the excellent performance of the Saturday afternoon band.

After the performance was over, we walked to the Princess Likelike's house, where we were entertained at a *poi* supper, which was served in the native fashion, in calabashes and on leaves, laid on mats on the floor, in the same manner as the feast at Tahiti. The walls of the dining-room were made of palm-leaves and bananas, and the roof was composed of the standards of the various members of the royal family, gracefully draped. At one end of the long table, where the Prince and I sat, there was his special royal standard, as heir-apparent, and just behind us were stationed a couple of women, with two large and handsome *kahilis*, which they waved incessantly backwards and forwards. The viands were much the same as at Tahiti—raw seaweed, which was eaten with each mouthful, being substituted for the chopped cocoa-nut and salt-water. The carved *koa* bowls, which were in constant requisition as finger-glasses, were specially elegant and useful-looking articles. *Poi* is generally eaten from a bowl placed between two people, by dipping three fingers into it, giving them a twirl round, and then sucking them. It sounds rather nasty; but, as a matter of fact, it is so

glutinous a mixture that you really only touch the particles that stick to your fingers. The latter you wash after each mouthful, so that there is nothing so very dreadful about it after all.

About twelve o'clock we thought it was time to say good-bye, as it was Saturday night. Beneath a brilliant full moon the drive to the wharf and row off in the boat were delightful.

Sunday, December 31st.—I was on deck at six o'clock, and saw what I had often heard about—a team of twenty oxen, driven by a man in a cart, drawing by means of a rope, about a quarter of a mile in length, a large ship through the opening in the reef, the man and cattle being upon the coral.

We went to eleven o'clock service at the cathedral. It is a pleasant small building, beautifully cool, and well adapted to this climate.

Later, Tom read the evening service to the men, and we afterwards landed and dined at the hotel. On our way back to the boat, the streets looked much more lively than they had hitherto done, being full of people returning from rides, drives, and excursions into the country. As a rule, directly after dark not a creature is to be seen about the streets. Every one disappears in the most mysterious manner.

We went on board, and sat in the calm moonlight, thinking and talking over the events of the year, whose end was so swiftly approaching, and wondering what its successor may have in store for us. So ends, with all its joys and sorrows, its pleasures and pains, its hopes and fears, for us, the now old year, 1876.

CHAPTER XVII.

HONOLULU—DEPARTURE FOR JAPAN.

*Years following years, steal something every day;
At last they steal us from ourselves away.*

Monday, January 1st, 1877.—At midnight we were awakened by our ship's bell, and that of the 'Fantôme,' being struck violently sixteen times. For the moment I could not imagine what it meant, and thought it must be an alarm of fire; indeed, it was not until we reached the deck, where we found nearly all the ship's company assembled at the top of the companion, and were greeted with wishes for 'A Happy New Year, and many of them,' that we quite realised that nothing serious was the matter. Soon the strains of sweet music, proceeding from the Honolulu choirs, which had come out in boats to serenade us, fell upon our ears. The choristers remained alongside for more than an hour, singing English and American sacred and secular hymns and songs, and then went off to the 'Fantôme,' where they repeated the performance. The moon shone brightly; not a ripple disturbed the surface of the water; the cocoa-trees at Waikiki, and the distant mountains near the Pali, were all clearly defined against the dark blue sky. It was altogether a romantic and delicious scene, and we found it difficult to tear ourselves away from the sweet sounds which came floating over the sea.

When I again went on deck, at half-past six, there was a large double canoe close to the yacht, crowded with people. It was difficult to make out what they were doing, for they appeared to be sitting on a great heap of something, piled up between the two canoes. Our sailors suggested that it must be 'some sort of a New Year's set out.' I ordered the 'Flash' to be got ready, and went with the children to make a closer investigation; and, as we approached, we could see that the pile that had puzzled us was a huge fishing-net. The tide here is very uncertain; but as soon as the water is low enough, they stretch the long net right across the narrow mouth of the harbour, and so secure an enormous quantity of fish of various kinds. It was a really good New Year's haul, and provided a hearty meal for a great many people.

Mabelle and I went at twelve o'clock to the Queen's New Year's reception, held in the other wing of the palace. Having driven through the pretty gardens, we were received at the entrance by the Governor, and ushered through two reception rooms into the royal presence. The Queen was dressed in a European court-dress, of blue and white material, with the Hawaiian Order of the Garter across her breast. Two maids of honour were also in court-dress. Of the other ladies, some were in evening, some in morning dress, some with bonnets and some without; but their costumes were all made according to the European fashion, except that of her Highness Ruth, the Governess of Hawaii, who looked wonderfully well in a rich white silk native dress, trimmed with white satin. She had a necklace of orange-coloured *oo* feathers round her neck, and dark yellow *alamanda* flowers in her hair. This native costume is a most becoming style of dress, especially to the chiefs and chiefesses, who are all remarkably tall and handsome, with a stately carriage and dignified manner. The Queen stood in front of the throne,

on which were spread the royal robes, a long mantle of golden feathers, without speck or blemish. On each side stood two men, dressed in black, wearing frock-coats, and capes of red, black, and yellow feathers over their shoulders, and chimney-pot hats on their heads. In their hands they held two enormous *kahilis* of black *oo* feathers, with handsome tortoise-shell and ivory handles. They were at least eight feet high altogether, and the feathers were about six inches across.

Queen Kapiolani is a nice-looking woman, with a very pleasing expression of countenance. She is the granddaughter of the heroic Princess Kapiolani, who, when the worship and fear of the goddess Pélé were at their height, walked boldly up to the crater of Kilauea, in defiance of the warnings and threats of the high-priestess of the idolatrous rites, proclaiming her confidence in the power of her God, the God of the Christians, to preserve her. This act did much to assist in the establishment of Christianity in the Island of Hawaii, and to shake the belief of the native worshippers of Pélé in the power of the fearful goddess.

The Princess showed me round the room which contains the portraits of the kings and queens of the Sandwich Islands for many generations, the early ones attired in their feather capes, the later ones dressed in European costumes. Most of them were the work of native artists; but the portraits of Kamehameha II. and his queen were painted, during their visit to England, by a good artist. Their majesties are depicted in the height of the fashion of the day, the king wearing a blue coat and brass buttons, with many orders on his breast, the queen having on a very short-waisted, tight-fitting white satin dress, a turban surmounted by a tremendous plume of white feathers, and a pearl necklace and bracelets: rather a trying costume for a handsome woman with a dark complexion and portly figure. They both died in England, and their

remains were brought back here for burial, in H.M.S. 'Blonde,' commanded by Lord Byron. There was also a portrait of Admiral Thomas, whose memory is highly revered here for the happy way in which he succeeded in terminating the disputes arising out of our claim to the island in 1843, and in restoring King Kamehameha III. to his own again. The collection likewise included excellent portraits of Louis Philippe and Napoleon III. Curiously enough, each of these was sent off from France to the Sandwich Islands, by way of Cape Horn, while the original was in the zenith of his power and fame; and each reached its destination after the original had been deposed and had fled to England for refuge.

But the most interesting object of all was still to come—the real feather cloak, cape, and girdle of the Kamehamehas, not generally to be seen, except at a coronation or christening, but which the Princess Kamakaeha, in her capacity of Mistress of the Robes, had kindly ordered to be put out for my inspection. The cloak, which is now the only one of the kind in existence, is about eleven feet long by five broad, and is composed of the purest yellow, or rather golden, feathers, which, in the sunlight, are perfectly gorgeous, as they have a peculiar kind of metallic lustre, quite independent of their brilliant colour.

In the afternoon we set out for an excursion to the Pali. We rode through the Nuuanu Avenue, and then up the hills, along a moderately good road, for about seven miles and a half. This brought us into a narrow gorge in the midst of the mountains, from which we emerged on the other side of the central range of hills, forming the backbone of the island. The view from this point was beautiful, though I think that the morning would be a better time to enjoy it, as, with a setting sun, the landscape was all in shadow. The change of temperature, too, after the heat of Honolulu, was quite astonishing,

considering the short distance we had come—about eight miles only. The ride down, in the light of the almost full moon, was delightful.

Tuesday, January 2nd.—At eleven o'clock, the King, who was rather better, went on board the 'Fantôme,' saw the men at quarters, and witnessed the firing of a couple of shots at a target, and shortly before twelve paid us a

The Pali-Oahu.

visit, accompanied by the Prince Leleiohoku and others. His Majesty is a tall, fine-looking man, with pleasant manners, and speaks English perfectly and fluently. He and the Prince visited and examined every corner of the yacht, and looked, I think, at almost every object on board.

It was two o'clock before our visitors left; and a quarter of an hour later the Queen and her sister arrived. Her Majesty and her sister made quite as minute an inspection of the yacht as her royal consort and his brother

had done before them. We had arranged to be 'at home' to all our kind friends in Honolulu at four o'clock, at which hour precisely the Governor sent the Royal band on board to enliven the proceedings. Soon our other visitors began to arrive; but the Queen appeared to be so well amused that she did not leave until five o'clock.

Wednesday, January 3rd.—At eleven o'clock we landed and went to see the interior of the Queen's Hospital. It is a fine and well-kept building, containing, at the time of our visit, about ninety patients, the men occupying the lower, the women the upper story. Each ward is tastefully decorated with bouquets, and the name is written up in bright mauve bougainvillea or scarlet hibiscus, tacked on to white calico. Many of the convalescents wore wreaths and garlands of flowers, and even those in bed had a few beside them, or in some cases a single spray laid on the coverlet. The effect was bright and cheerful; and it seemed a kind and sensible idea to endeavour to gratify, instead of to repress, the instinctive love of flowers universally felt by the natives of these and of the South Sea Islands.

From the hospital we went to pay farewell visits, and to lunch at the hotel. At three we were to go to the Royal Mausoleum. This was a special privilege, and, I believe, the greatest compliment that has been paid to us anywhere. No foreigners are allowed to enter, except admirals on the station; and very few inhabitants of Honolulu have ever seen the interior. The King has one key, the Dowager Queen Emma another, and the Minister of the Interior the third.

On our way up the hill to the Mausoleum, there was a funeral going on, very much after the style of an Irish wake, in one of the dwellings of the poorer class. The house was decorated with flags, and was crowded with people, all dressed in black, and generally with bright

yellow *leis* over their heads and necks. They had evidently come from some distance, judging by the number of carts and wagons drawn up outside the door. Several people were sitting in an upper verandah. The corpse was laid out in the lower room, facing the road, as we could see through the open windows and door. It was surrounded by mourners, and four women were waving large *kahilis* slowly backwards and forwards in front of it.

The Princess herself met us at the Mausoleum, which is a small but handsome stone Gothic building, situated above the Nuuanu Avenue, on the road to the Pali. It commands a fine view over land and sea, and the gentle breezes waft through the open windows sweet scents from the many fragrant trees and flowers by which it is surrounded. There lay the coffins of all the kings of Hawaii, their consorts, and their children, for many generations past. The greater part were of polished *koa* wood, though some were covered with red velvet ornamented with gold. Many of them appeared to be of an enormous size; for, as I have already observed, the chiefs of these islands have almost invariably been men of large and powerful frames. The bones of Kamehameha I. were in a square oak chest. At the foot of the coffin of Kamehameha IV. there were two immense *kahilis* about twelve feet high, one of rose-coloured, the other of black feathers, with tortoise-shell handles. The remains of King Lunalilo are not here, having been buried just outside the native church in the town. In the vestibule to the tombs of the kings rests the coffin of Mr. Wylie, described as 'the greatest European benefactor of the Hawaiian people.' A ship now in the harbour bears his name, and one constantly meets with proofs of the respect and reverence in which his name is held.

The Princess drove us down to the wharf, where

said good-bye to her with feelings of the greatest regret. At last the anchor was weighed, and the yacht, which was by this time once more in apple-pie order, began slowly to move ahead. Suddenly we heard shouts from the shore, and saw a boat pursuing us in hot haste. We stopped, and received on board a basket of beautiful ferns and other parcels from different friends. A second boat was then seen coming off to us, which contained a fine dish of delicious honey and some flowers. The order to go ahead again was scarcely given, before a third boat, in, if possible, hotter haste than the two previous ones, put off after us, bringing some things the laundress had forgotten.

Now we are fairly off; and now surely the last link that binds us to the shore is broken. But no! there are farewell signals and hearty cheers yet to come from the officers and men of the 'Fantôme;' and, still further out, on the top of the tiny lighthouse at the mouth of the narrow passage through the reef, stand other friends, cheering and waving their handkerchiefs. They had rowed out thither, being determined to give us really *the* parting cheer, and till the shades of twilight fell we could see their white handkerchiefs fluttering, and hear their voices borne on the evening breeze, as we meandered slowly through the tortuous channels into deep water.

CHAPTER XVIII.

HONOLULU TO YOKOHAMA.

*As slow our ship her foamy track
Against the wind was cleaving,
Her trembling pennant still look'd back
To that dear isle 'twas leaving.*

Thursday, January 4th.—It was very rough, but fortunately the wind came from a favourable quarter. Sorry as we all were to bid farewell to these charming islands, I could not help rejoicing that we had picked up a fresh fair wind so unexpectedly soon.

While we were at Honolulu a regular epidemic of influenza prevailed in the place, affecting both man and beast. This is often the case during the prevalence of the south wind, which blew, more or less, during the whole of our stay. We none of us suffered from the malady at the time, but now nearly everybody on board is affected, and some very severely.

Friday, January 5th.—The fresh fair breeze still continues. At noon we had sailed 240 knots.

Saturday, January 6th.—The gale increased during the night, and the head-sea became heavier. There was a good deal of rain in the course of the day. The wind dropped about sunset, and was succeeded by intervals of calm, with occasional sharp squalls.

Sunday, January 7th.—A very rough and disagreeable day, with much rain.

Monday, January 8th.—Heavy squalls of wind and rain, and continuous rolling.

Tuesday, January 9th.—The wind fell light, and the weather improved; but we tumbled about more than ever.

Wednesday, January 10th.—Very hot, and a flat calm. Steam was up at 7.30 a.m. In the afternoon one of the boiler tubes burst. It was repaired, and we went on steaming. In the evening it burst again, and was once more repaired, without causing a long stoppage.

(Thursday, January 11th, had no existence for us, as in the process of crossing the 180th meridian, we have lost a day).

Friday, January 12th.—Wednesday morning with us was Wednesday evening with people in England, and we were thus twelve hours behind them. To-day the order of things is reversed, and we are twelve hours in advance of our friends at home. Having quitted one side of the map of the world (according to Mercator's projection), and entered upon the other half, we begin to feel that we are at last really 'homeward bound.'

At four a.m. the boiler-tube again burst, and we consequently ceased steaming. Letting off steam, and blowing out the boiler, made a tremendous noise, which aroused everybody in the ship. It was a lovely morning, but a flat calm, and the sun rose magnificently. The few light clouds near the surface of the water caught and reflected the rays of light most brilliantly before the sun itself appeared, and assumed all manner of fanciful shapes.

About six o'clock a very light breeze sprang up, which increased during the day; but the sea remained perfectly calm. We think we must have got into the trades again. This weather is indeed a luxury after all the knocking about we have lately gone through.

Saturday, January 13th.—The engineers made up their minds that we were in the trade winds again yesterday, and that we should not want the engines for some days. They therefore did not hurry on with the repairs as they should have done. This morning there was a calm, and when Tom ordered steam to be got up at once, the reply was, 'Please, sir, the engine won't be ready till night.' This was annoying; but they worked extra hard all day, and by 4 p.m. steam was raised. At six a nice little breeze sprang up, which freshened during the evening, and at midnight orders were given to stop steaming.

We had another bad night of it—a head wind, the sea washing over the decks, everything shut up, and the thermometer standing at 90°.

Sunday, January 14th.—I was on deck at 4 a.m. The Southern Cross, the Great Bear, and the North Star, were shining with a brilliancy that eclipsed all the other stars.

During the day the wind freshened to a squally gale. Sometimes we were going ten, sometimes thirteen, and sometimes fifteen knots through the water, knocking about a good deal all the while.

Monday, January 15th.—I woke once or twice in the night, and felt exactly as if I were being pulled backwards through the water by my hair. We were rushing and tearing along at such a pace, against a head sea, that it almost took one's breath away. But at noon we were rewarded for all discomfort by finding that we had run 298 sea, or 343 land miles, in 24 hours, and that between 8.14 yesterday and 8.15 to-day we had made 302 knots, or 347 land miles—nearly 350 miles in the 24 hours—under very snug canvas, and through a heavy sea. The wind still continued fair and fresh, but the sea was much quieter, and we all felt comparatively comfortable. More sails were set during the afternoon. Some albatrosses and

long-tailed tropic birds were seen hovering about us. The moon begins to give a good light now, and we found it very pleasant on deck this evening.

Amateur Navigation

A. Y. B.

Thursday, January 18th.—Between breakfast and lunch we sailed over the spot where Tarquin Island is marked on the chart, and, between lunch and dinner, over a nameless reef, also marked on the chart. A good look-

out had been kept at the masthead and in the bows, but not a trace could be seen of either of these objects in any direction. The weather kept clear and bright, and the sea was much calmer.

During the last five days we have covered 1,221 sea miles.

Monday, January 22nd.—At daylight Asuncion Island was still visible. It is of volcanic origin, and is in the form of a perfect sugar-loaf, 2,600 feet high, rising out of the sea, exactly as I had expected the Peak of Teneriffe to appear. Some say that the remains left by the ancient inhabitants resemble Aztec remains; others, that they are like those of the more modern Peruvians. All authorities, however, seem to agree that they are like those on Easter Island, the south-east extremity of Polynesia, this being the north-west.

We were close-hauled all day; the wind was strong, and the sea rough and disagreeable.

Tuesday, January 23rd.—Still close-hauled and still a heavy swell. The galley boiler burst to-day, so we are now dependent on the one in the forecastle. During the night we passed the Euphrosyne rock. It looks like a ship in full sail, and abounds with turtle, fish, and sea-elephants.

Wednesday, January 24th.—Very much colder, though we are only just outside the tropics. The wind was rather freer, and we had a beautiful moonlight night.

Friday, January 26th.—During the night the breeze freshened, and in the morning increased to a gale. Steam was therefore let off. It has been a miserable day; so cold, wet, and rough, that it was impossible to do anything, or to sit anywhere, except on the floor.

Saturday, January 27th.—About two o'clock this morning the yacht plunged so heavily into a deep sea, that the jibboom, a beautiful spar, broke short off, and

the foretopgallant mast and topgallant yard were carried away almost at the same moment, with a terrible noise. It took about eight hours to clear the wreck, all hands working all night; and a very forlorn appearance the deck presented in the morning, lumbered up with broken spars, ropes, &c. The jibboom fell right across the fore-foot of the yacht, and now looks as if it had been cut at for weeks with some blunt tool.

The weather cleared a little to-day, but there was still a heavy sea and nearly a head wind. The crew were busily engaged in repairing damages.

Sunday, January 28th.—It is finer, but bitterly cold. Several of my tropical birds are already dead. The little pig from Harpe Island, and the Hawaiian geese, look very wretched, in spite of all my precautions.

We had a splendid though stormy sunset, which did not belie its promise, for the wind shortly afterwards became stiffer and stronger, until at last we had two reefs down, and were tumbling about in all directions, as we rushed through the water. The dining-tables tilted till they could go no further, and then paused to go back again; but not quickly enough, for the glasses began to walk uphill and go over the edge in the most extraordinary manner. On deck the night looked brilliant but rather terrible. The full moon made it as light as day, and illuminated the fountains of spray blown from the waves by which we were surrounded. Without her heavy jibboom, and with her canvas well reefed down, the 'Sunbeam' rode through it all, dipping her head into the sea, shivering from stem to stern, and then giving herself a shake, preparatory to a fresh start, just like a playful water-bird emerging from a prolonged dive.

Monday, January 29th.—At four o'clock I was called to go on deck to see the burning mountain. The wind was still blowing hard, but we were among the

islands, and in comparatively smooth water. The full moon still rode high in the heavens, her light being reflected in rainbow hues from the spray and foam that drifted along the surface of the water. On every side were islands and rocks, among which the sea boiled, and seethed, and swirled, while the roaring breakers dashed against the higher cliffs, casting great columns of spray into the air, and falling back in heavy rollers and surf. Just before us rose the island of Vries, with its cone-shaped volcano, 2,600 feet high, emitting volumes of smoke and flame. It was overhung by a cloud of white vapour, on the under side of which shone the lurid glare of the fires of the crater. Sometimes this cloud simply floated over the top of the mountain, from which it was quite detached; then there would be a fresh eruption; and after a few moments' quiet, great tongues of flame would shoot up and pierce through the overhanging cloud to the heavens above, while the molten lava rose like a fountain for a short distance, and then ran down the sides of the mountain. It was wondrously beautiful; and, as a defence against the intense cold, we wrapped ourselves in furs, and stayed on deck watching the scene, until the sun rose glorious from the sea, and shone upon the snow-covered sides of Fujiyama, 'the matchless mountain,' as it is called by the Japanese. It is an extinct crater, of the most perfect form, rising abruptly from a chain of very low mountains, so that it stands in unrivalled magnificence. This morning, covered with the fresh-fallen snow, there was not a spot nor a fleck to be seen upon it, from top to bottom. It is said to be the youngest mountain in the world, the enormous mass having been thrown up in the course of a few days only 862 years B.C.

We reached the entrance to the Gulf of Yeddo about nine o'clock, and passed between its shores through hundreds of junks and fishing boats. I never saw anything

like it before. The water was simply covered with them ; and at a distance it looked as though it would be impossible to force a passage. As it was, we could not proceed very fast, so constantly were the orders to 'slow,' 'stop,' 'port,' 'starboard,' given ; and I began at last to fear that it would be impossible to reach Yokohama without running down at least one boat.

The shores of the gulf, on each side, consist of sharp-cut little hills, covered with pines and cryptomerias, and dotted with temples and villages. Every detail of the scene exactly resembled the Japanese pictures one is accustomed to see in England ; and it was easy to imagine that we were only gazing upon a slowly moving panorama, unrolling itself before us.

It was twelve o'clock before we found ourselves among the men-of-war and steamers lying near the port of Yokohama, and two o'clock before the anchor could be dropped. During this interval we were surrounded by a swarm of boats, the occupants of which clamoured vociferously to be allowed on board, and in many cases they succeeded in evading the vigilance of the man at the gangway, by going round the other side and climbing over the rail. A second man was put on guard ; but it was of no use, for we were invaded from all directions at once. We had a good many visitors also from the men-of-war, Japanese and English, and from the reporters of newspapers, full of curiosity, questions, and astonishment.

Having at last managed to get some lunch, Tom went to bed to rest, after his two hard nights' work, and the rest of us went on shore. On landing at the jetty we were rushed at by a crowd of *jinrikisha* men, each drawing a little vehicle not unlike a Hansom cab, without the seat for the driver—there being no horse to drive. The man runs between the shafts, and is often preceded by a leader, harnessed on in front, tandem fashion. Each of

these vehicles holds one person, and they go along at a tremendous pace.

The people we met in the streets were a study in themselves. The children said they looked 'like fans walking about;' and it was not difficult to understand their meaning. The dress of the lower orders has remained precisely the same for hundreds of years; and before I had been ashore five minutes I realised more fully than I had ever done before the truthfulness of the representations of native artists, with which the fans, screens, and vases one sees in England are ornamented.

Japanese Boats

CHAPTER XIX.

YOKOHAMA.

*Heavily plunged the breaking wave,
And foam flew up the lea,
Morning and evening the drifted snow
Fell into the dark grey sea.*

Tuesday, January 30th.—When we awoke from our slumbers this morning, it was very cold and dark, and we heard noises of a strange kind. On going on deck to ascertain the cause of this state of things, we discovered that the skylights and portholes were all covered and blocked up with snow, and that the water froze as it came out of the hose, forming a sheet of ice on the deck. Masses of snow and ice were falling from the rigging, and everything betokened that our welcome to Japan would not be a warm one.

After breakfast we had many visitors, and received letters from Sir Harry and Lady Parkes, inviting us to go up to Yeddo to-morrow for a long day, to settle our future plans.

Having landed, we went with the Consul to the native town to see the curio shops, which are a speciality of the place. The inhabitants are wonderfully clever at making all sorts of curiosities, and the manufactories of so-called 'antique bronzes' and 'old china' are two of the most wonderful sights in Yokohama. The way in which they

scrape, crack, chip, mend, and colour the various articles, cover them with dust, partially clean them, and imitate the marks and signatures of celebrated makers, is more creditable to their ingenuity than to their honesty. Still, there are a good many genuine old relics from the temples, and from the large houses of the reduced Daimios, to be picked up, if you go the right way to work, though the supply is limited. Dealers are plentiful, and travellers, especially from America, are increasing in numbers. When we first made acquaintance with the shops we thought they seemed full of beautiful things, but even one day's shopping, in the company of experienced people, has educated our taste and taught us a great deal; though we have still much to learn. There are very respectable-looking lacquer cabinets ranging in price from 5*s.* to 20*l.* But they are only made for the foreign market. No such things exist in a Japanese home. A really good bit of old lacquer (the best is generally made into the form of a small box, a portable medicine-chest, or a chow-chow box) is worth from 20*l.* to 200*l.* We saw one box, about three inches square, which was valued at 45*l.*; and a collection of really good lacquer would be costly and difficult to obtain even here. The best specimens I have ever seen are at Lady Alcock's; but they are all either royal or princely presents, not to be bought with money. The tests of good lacquer are its exquisite finish, its satiny, oily feel, and the impossibility of making any impression on it with your thumb-nail. It is practically indestructible, and will wear for ever. All the poor as well as the rich people here use it, and have used it for centuries, instead of china and glass, for cups, saucers, dishes, bowls, which would need to be often washed in the hottest of water. It is said that the modern Japanese have lost the art of lacquer making; and as an illustration I was told that many beautiful articles of lacquer, old and new, had been sent from this country to the Vienna

Exhibition in 1873, but the price put on them was so exorbitant that few were sold, and nearly all had to be sent back to Japan. Just as the ship with these things on board reached the Gulf of Yeddo, she struck on a rock and sank in shallow water. A month or two ago a successful attempt was made to raise her, and to recover the cargo, when it was found that the new lacquer had been reduced to a state of pulp, while the old was not in the least damaged. I tell you the tale as it was told to me.

After a long day's shopping, we went to dine, in real Japanese fashion, at a Japanese tea-house. The establishment was kept by a very pleasant woman, who received us at the door, and who herself removed our exceedingly dirty boots before allowing us to step on to her clean mats. This was all very well, as far as it went; but she might as well have supplied us with some substitute for the objectionable articles, for it was a bitterly cold night, and the highly polished wood passages and steep staircase felt very cold to our shoeless feet. The apartment we were shown into was so exact a type of a room in any Japanese house, that I may as well describe it once for all. The woodwork of the roof and the framework of the screens were all made of a handsome dark polished wood, not unlike walnut. The exterior walls under the verandah, as well as the partitions between the other rooms, were simply wooden lattice-work screens, covered with white paper, and sliding in grooves; so that you could walk in or out at any part of the wall you chose, and it was, in like manner, impossible to say whence the next comer would make his appearance. Doors and windows are, by this arrangement, rendered unnecessary, and do not exist. You open a little bit of your wall if you want to look out, and a bigger bit if you want to step out. The floor was covered with several thicknesses of very fine mats, each about six feet long by three broad, deliciously soft to walk upon. All mats in Japan are of the same size,

and everything connected with house-building is measured by this standard. When once you have prepared your foundations and woodwork of the dimensions of so many mats, it is the easiest thing in the world to go to a shop and buy a house, ready made, which you can then set up and furnish in the scanty Japanese fashion in a couple of days.

On one side of the room was a slightly raised *daïs*, about four inches from the floor. This was the seat of honour. On it had been placed a stool, a little bronze ornament, and a china vase, with a branch of cherry-blossom and a few flag-leaves gracefully arranged. On the wall behind hung pictures, which are changed every month, according to the season of the year. There was no other furniture of any sort in the room. Four nice-looking Japanese girls brought us thick cotton quilts to sit upon, and braziers full of burning charcoal, to warm ourselves by. In the centre of the group another brazier was placed, protected by a square wooden grating, and over the whole they laid a large silk eider-down quilt, to retain the heat. This is the way in which all the rooms, even bedrooms, are warmed in Japan, and the result is that fires are of very frequent occurrence. The brazier is kicked over by some restless or careless person, and in a moment the whole place is in a blaze.

Presently the eider-down and brazier were removed, and our dinner was brought in. A little lacquer table, about six inches high, on which were arranged a pair of chop-sticks, a basin of soup, a bowl for rice, a *saki* cup, and a basin of hot water, was placed before each person, whilst the four Japanese maidens sat in our midst, with fires to keep the *saki* hot, and to light the tiny pipes with which they were provided, and from which they wished us to take a whiff after each dish. *Saki* is a sort of spirit, distilled from rice, always drunk hot, out of small cups. In

this state it is not disagreeable, but we found it exceedingly nasty when cold.

Everything was well cooked and served, though the ingredients of some of the dishes, as will be seen from the following bill of fare, were rather strange to our ideas. Still they were all eatable, and most of them really palatable.

Soup.

Shrimps and Seaweed.

Prawns, Egg Omelette, and Preserved Grapes.

Fried Fish, Spinach, Young Rushes, and Young Ginger.

Raw Fish, Mustard and Cress, Horseradish, and Soy.

Thick Soup, of Eggs, Fish, Mushrooms and Spinach; Grilled Fish.

Fried Chicken, and Bamboo Shoots.

Turnip Tops and Root Pickled.

Rice ad libitum in a large bowl.

Hot Saki, Pipes and Tea.

The meal concluded with an enormous lacquer box of rice, from which all our bowls were filled, the rice being thence conveyed to our mouths by means of chop-sticks. We managed very well with these substitutes for spoons and forks, the knack of using which, to a certain extent, is soon acquired. The long intervals between the dishes were beguiled with songs, music, and dancing, performed by professional singing and dancing girls. The music was somewhat harsh and monotonous; but the songs sounded harmonious, and the dancing was graceful, though it was rather posturing than dancing, great use being made of the fan and the long trailing skirts.

On our return we had considerable difficulty in getting a boat, our own boats being all ashore under repair.

It was a beautiful moonlight night, but bitterly cold. The harbour being so full of shipping, our boatmen were at first puzzled how to find the yacht, till we pointed to the lights in the deck-house—always a good beacon at night in a crowded harbour.

Wednesday, January 31st.—We left the yacht soon after eight o'clock, and started by the 9.34 a.m. train for the city formerly called Yeddo, but latterly, since the Mikado has resided there, Tokio, or eastern capital of Japan. The ground was covered with snow, and there were several degrees of frost; but the sun felt hot, and all the people were sunning themselves in the doorways or wide verandahs of their houses.

Yokohama has been so completely Europeanised, that it was not until we had left it that we caught our first glimpse of Japanese life; and the whole landscape and the many villages looked very like a set of living fans or tea trays, though somehow the snow did not seem to harmonise with it.

We crossed several rivers, and reached Tokio in about an hour, when we at once emerged into the midst of a clattering, chattering crowd, amongst whom there did not seem to be a single European.

Tokio is a genuinely Japanese town; not a single foreigner residing within its limits, with the exception of the foreign Ministers.

Our first halting-place was at the Temple of Shiba, not far from the station, where most of the Tycoons have been buried. It is a large enclosure, many acres in extent, in the centre of the city, with walls overgrown with creepers, and shadowed by evergreen trees, amid whose branches rooks caw, ravens croak, and pigeons coo, as undisturbedly as if in the midst of the deepest woodland solitude. I had no idea there was anything so beautiful in Japanese architecture as this temple. The primary idea in the

architecture of Japan is evidently that of a tent among trees. The lines of the high, overhanging, richly decorated roofs, with pointed gable ends, are not straight, but delicately curved, like the suspended cloth of a tent. In the same way, the pillars have neither capital nor base, but seem to run through the building perpendicularly, without beginning or end. The principal temple was burnt down a few years ago ; but there are many smaller ones remaining, built in exactly the same style, and all the tombs are perfect. Some people say the bodies are enclosed in coffins, filled with vermillion ; but I need hardly say we had no opportunity of ascertaining the correctness of this statement. We entered several of the temples, which are perfect marvels of carving, gilding, painting, and lacquer work. Their style of decoration may be somewhat barbaric ; but what a study they would form for an artist ! Outside, where no colour is used, the overhanging roofs and the walls are carved with a depth and boldness, and yet a delicacy, I have seldom seen equalled ; the doors and railings being of massive bronze, brought from Corea. Within, a dim religious light illumines and harmonises a dazzling mass of lacquer, gold, and painting. It is the grandest burial-place imaginable ; too good for the long line of men who have tyrannised over Japan and its lawful sovereigns for so many centuries past.

The streets of Tokio were crowded with a motley throng up to the very gates of the citadel, where, within the first moat, stand all the *yashgis*, or residences of the Daimios. Each *yashgi* is surrounded by a blank wall, loopholed, and with a tower at each of the four corners. Within this outer wall is the court of the retainers, all of them 'two-sworded' men ; then comes a second wall, also loopholed, inside which dwell distant relations of the Daimio ; and then again a third enclosure, guarding the Daimio himself, with his immediate belongings. After

crossing the third moat we reached the Mikado's gardens and palace, the public offices, and the residences of the foreign Ministers, all of which were formerly occupied by the Tycoon, or Shogun, and his ministers. On the waters of the inner moat were thousands of wild ducks and geese. Nobody is allowed to harm them, and the birds seem to be perfectly aware of this fact, for they disport themselves with the greatest confidence.

The English Embassy is a nice red brick house, built in the centre of a garden, so as to be as secure as possible from fire or attack. After a most pleasant luncheon we looked over the nucleus of a second collection which Lady Parkes is beginning to form. Her former beautiful collection was burnt a few years ago, a most disheartening misfortune, especially as the opportunities for obtaining really old and good things in Japan are diminishing day by day.

A little later we started in great force, some in carriages and some on horseback, attended by running grooms, to see something more of the city. These men think nothing of running by the side of a horse and carriage some forty miles a day. They form a distinct class, and when working on their own account wear little clothing. When in the service of private individuals they are dressed in tight-fitting dark-blue garments, with short capes, fastened to their arms, and large hats.

There is always a festival going on in some part of Tokio. To-day there had been a great wrestling-match, and we met all the people coming away. Such crowds of *jinrikishas*, full of gaily dressed and painted women and children, with their hair plastered into all sorts of inconceivable shapes, and decorated with artificial flowers and glittering pins! We met six of the wrestlers themselves, riding in *jinrikishas*—big men, prodigiously fat, and not at all, according to our ideas, in fighting or wrestling

condition. After a long and delightful drive we arrived at the station just in time to catch the train.

The return journey to Yokohama, in the omnibus-like railway carriages, was very cold, and the *jinrikisha* drive to the Grand Hotel colder still.

After dinner we looked over a fine collection of photographs of Japanese scenery and costumes, and then returned to the yacht in the house-boat belonging to the hotel, which was prettily decorated with bright-coloured lanterns, and which afforded welcome shelter from the biting wind.

Thursday, February 1st.—Careful arrangements have been made for our excursion to the Island of Inoshima, to see the great figure of Daibutz. By eight o'clock we had landed, and packed ourselves into a funny little shaky carriage, drawn by four horses. We drove quickly through the town, past the station, along the Tokaido, or imperial road, running from one end of the Island of Nippon to the other, and on which so many foreigners have been murdered even within the last ten years. Now, however, it is perfectly safe. The houses are one story high, and their walls are made of the screens I have already described. These screens were all thrown back, to admit the morning air, cold as it was. We could consequently see all that was going on within, in the sitting-room in front, and even in the bedrooms and kitchen. At the back of the house there was invariably a little garden to be seen, with a miniature rockery, a tree, and a lake; possibly also a bridge and a temple. Even in the gardens of the poorest houses an attempt at something of the sort had been made. The domestic occupations of the inhabitants being conducted in this public manner, a very good idea might be obtained, even at the end of a few miles' drive, of how the lower class of Japanese wash and dress themselves and their children, how very elaborate the

process of hair-dressing is, to say nothing of a bird's-eye view of the ground plan of the houses, the method of cooking food, &c.

As we emerged into the open country the landscape became very pretty, and the numerous villages, nestling in the valleys at the foot of the various small hills, had a most picturesque appearance. At a stone-quarry that we passed, on the side of a mountain, there were about seventy men at work, without any clothing, though the thermometer was far below freezing point. The Japanese are a sensitive nation, and finding that foreigners were astonished and shocked at the habits of the people, in going about without clothes, and in bathing in public and at their house doors, they passed a law prohibiting these customs in towns. In the country, however, the more primitive customs are still in force, and every dwelling has its half-open bath-house, whilst the people do as they like in the matter of clothing.

After stopping twice on the road, to drink the inevitable tea, we changed from our carriage to *jinrikishas*, each drawn and pushed by four strong men, bowling along at a merry pace. The sun was very warm in the sheltered valleys, and the abundance of evergreens of all kinds quite deluded one into the belief that it was summer time, especially as camellias grew like forest trees, covered with red and white bloom, amidst a dense tangle of bamboos and half-hardy palms. There were many strange things upside down to be seen on either hand—horses and cows with bells on their tails instead of on their necks, the quadrupeds well clothed, their masters without a scrap of covering, tailors sewing from them instead of to them, a carpenter reversing the action of his saw and plane. It looked just as if they had originally learned the various processes in 'Alice's Looking-glass World' in some former stage of their existence.

We had not long left the town before our men began to undress each other ; for their clothes were so tight that it required no inconsiderable effort to remove them. Some of them were beautifully tattooed. My wheeler had the root of a tree depicted on one foot, from which sprang the trunk and branches, spreading gradually, until on his back and chest they bore fruit and flowers, amongst which birds were perched. On his other leg was a large stork, sup-

A Drag across the Sand in a Jinrikisha. A.Y.B.

posed, I imagine, to be standing under the shadow of the same tree. Another man had human figures tattooed all over him, in various attitudes.

In less than an hour we reached the narrow strip of land which at low water connects the island or peninsula of Inoshima with the mainland. This isthmus was covered with natives gathering shells and seaweed, casting their s, and pushing off or dragging up their boats ; whilst

an island rose fresh and green from the sea, with a background of snowy mountains, stretching across the bay, above which Fujiyama towered grandly. This name signifies 'not two, but one mountain,' the Japanese thinking it impossible that there can be another like it in the world. The lovely little island is called Inoshima, and is conical in shape and covered with evergreens and Buddhist temples, with a few small fishing villages scattered on its shores. We walked right across it in about an hour; so you may imagine it is not very large. The sea teems with curiously shaped fish and beautiful shells. The staple food of the inhabitants seems to be those lovely 'Venus's ears' (*Haliotis*), as they are called—a flattish univalve, about as big as your hand, with a row of holes along the edge, and a lining of brilliant black mother-of-pearl. These were lying about in heaps mixed with white mother-of-pearl shells, as big as your two fists, and shaped like a snail-shell.

Our *jinrikisha* men deposited us at the bottom of the main street of the principal village, to enter which we passed through a simple square arch of a temple. The street was steep and dirty, and consisted principally of shell-fish and seaweed shops.

An old priest took us in hand, and, providing us with stout sticks, marched us up to the top of the hill to see various temples, and splendid views in many directions. The camellias and evergreens on the hillside made a lovely framework for each little picture, as we turned and twisted along the narrow path. I know not how many steps on the other side of the island had to be descended before the sea-beach was reached. Here is a cavern stretching 500 feet straight below high-water mark, with a shrine to Benton Sama, the *Lucina* of Japan; and having been provided with candles, we proceeded a few hundred feet through another cave, running at right angles to the first,

After this we proceeded on our way towards the Daibutz, or Great Buddha, situated within the limits of what was once the large city of Kama-kura, now only a collection of small hamlets. As all Japanese cities are built of wood, it is not wonderful that they should in time entirely disappear, and leave no trace behind them. But there still remain some of the columns of the temple which once existed in the gardens surrounding the idol. Now he is quite alone; and for centuries has this grand old figure sat, exposed to the elements, serenely smiling on the varying scene beneath him. The figure is of bronze, and is supposed to have been cast about the year 1250 or 1260. It is some 50 ft. high, with golden eyes and a silver spiral horn on the forehead. It is possible to sit or stand on the thumb, and within the hollow body an altar is erected, at which the priests officiate. Sitting there, amidst a grove of enormous cryptomerias and bamboos, there is an air of ineffable silent strength about that solitary figure, which affords a clue to the tenacity with which the poorer classes cling to Buddhism. The very calmness of these figures must be more suggestive of relief and repose to the poor weary worshippers than the glitter of the looking-glass and crystal ball to be found in the Shintoo temples. The looking-glass is intended to remind believers that the Supreme Being can see their innermost thoughts as clearly as they can perceive their own reflection; while the crystal ball is an emblem of purity. Great store is set by the latter, especially if of large size and without flaw; but to my mind the imperfect ones are the best, as they refract the light and do not look so much like glass.

In another village close by—also part of the ancient Kama-kura—there is a fine temple, dedicated to the God of War; but we were pressed for time, and hurried back to the little carriages. The homeward drive was long and cold; but the Tokaido looked very pretty lighted up, the

shadows of the inmates being plainly visible on the paper walls, reminding one of a scene in a pantomime. On our way down a very steep hill we met the men carrying a *cango*. It is a most uncomfortable-looking basket-work contrivance, in which it is impossible to sit or lie with ease. These *cangoes* used formerly to be the ordinary conveyance of Japan, but they are now replaced by the *jinrikishas*, and they are seldom met with, except in the mountains or in out-of-the-way places.

Friday, February 2nd.—The market at Yokohama is one of the sights of the place. There were large quantities of birds and game of all kinds—pheasants with tails six feet long, of a rare copper-coloured variety, ducks, pigeons, small birds, hares, deer, rabbits. The fish-market was well supplied, especially with cuttle-fish. They are not inviting-looking, but are considered a delicacy here. A real octopus, in a basket, with its hideous body in the centre, and its eight arms, covered with suckers, arranged in the form of a star, is worth from a dollar to a dollar and a half, according to its size.

From the market we went to one or two small shops in back streets, and thence over the bluffs, in the teeth of a bitterly cold wind, to a nursery garden, to examine the results of the Japanese art of dwarfing and distorting trees. Some of the specimens were very curious and some beautiful, but most were simply hideous. We saw tiny old gnarled fruit-trees, covered with blossom, and Scotch firs and other forest trees, eight inches high, besides diminutive ferns and creepers.

We weighed anchor at 8.30 p.m. and proceeded under steam. At 11.30, when off Touraya-saki, we set some of the head canvas. It was a cold night, with sleet and snow, though it was not blowing as hard as during the day.

CHAPTER XX.

KIOTO, LATE MIACO.

*Manners with fortunes, humours change with climes,
Tenets with books, and principles with times.*

Saturday, February 3rd.—The occasional glimpses of the coast scenery through the sleet and snow were very fine. We passed Rocky Island, Lady Inglis rocks, and Matoya.

Sunday, February 4th.—It was blowing hard all day, raining, snowing, and sleeting. The scenery appeared to be pretty, and we passed through crowds of picturesque junks.

At 4.25 we rounded Tomamgai Smia, and at 9 p.m. anchored off the town of Kobe, or Hiogo.

These constant changes of names are very puzzling. Miaco and Yeddo, which we did know something about, are quite cut out, and replaced by Kioto and Tokio. Oddly enough, the same syllables, reversed, mean capital of the Western Empire and capital of the Eastern Empire respectively.

Monday, February 5th.—By seven o'clock a boat was alongside with letters from the Consul and Sir Harry Parkes, who had kindly made all the necessary arrangements for us to see the opening of the railway from Kobe to Kioto, and for the presentation of the gentlemen to the Mikado.

It certainly was a great opportunity for seeing a Japanese holiday crowd, all dressed in their best. Thousands and thousands of people were in the streets, who, though naturally anxious to see as much as possible, behaved in the most quiet and orderly manner. The station was beautifully decorated with evergreens, camellias, and red berries. Outside there was a most marvellous pavilion, the woodwork of which had been entirely covered with evergreens, and ornamented with life-size dragons and phoenixes (the imperial insignia of Japan), all made in flowers. The roof was studded with large chrysanthemums—the private device of the Mikado, that of the Tycoon being three hollyhock leaves. The sides of the pavilion were quite open, the roof being simply supported on pillars; so that we could see everything that went on, both inside and out. The floor was covered with red cloth; the daïs with an extremely ugly Brussels carpet, with a large pattern. On this the Mikado's throne was placed, with a second canopy above it. Tom in R.N.R. uniform, the other gentlemen in evening dress, accompanied the Consul on to the platform to receive the Mikado; while the children and I went with Mrs. Annesley to seats reserved for the foreign representatives. There were not many Europeans present; but the platform was densely crowded with Japanese, sitting on their heels, and patiently waiting to see the extraordinary sight of their hitherto invisible spiritual Emperor brought to them by a steam engine on an iron road. The men had all had their heads fresh shaven, and their funny little pigtails rearranged for the occasion. The women's hair was elaborately and stiffly done up with light tortoiseshell combs and a large pin, and decorated with artificial flowers. Some of the children were gaily dressed in red and gold under garments, the prevailing colour of the costumes being dark blue, turned up with red. They also wore gay

embroidered *obis*, or large sashes, which are put on in a peculiar fashion. They are of great width, and are fastened tightly round the waist, while an enormous bow behind reaches from between the shoulders to far below the hips. The garments fit tightly in front, while at the back they form a sort of huge bunch. On their high-heeled clogs the women walk with precisely the same gait as ladies in high-heeled boots.

Watching the crowd occupied the time in a most interesting manner, till the firing of guns and the playing of bands announced the arrival of the imperial train. The Mikado was received on the platform, and after a very short delay he headed the procession along the covered way on to the daïs.

He is a young, not very good-looking man, with rather a sullen expression, and legs that look as though they did not belong to him—I suppose from using them so little, and sitting so much on his heels; for until the last few years the Mikado has always been considered far too sacred a being to be allowed to set foot on the earth. He was followed by his highest Minister, the foreign Ministers, and a crowd of Japanese dignitaries, all, with one or two exceptions, in European official dress, glittering with gold lace. I believe it was the first time that many of them had ever worn it. At any rate, they certainly had never learned to put it on properly.

I could not help thinking that the two or three old conservative Ministers who had stuck to their native dress must have congratulated themselves on their firmness, when they saw the effect of the unaccustomed garments upon their *confrères*. The old court dress of the Daimios is very handsome, consisting of rich silks and brocades, with enormously long loose trousers trailing two or three feet on the ground, and with sleeves, like butterfly wings, of corresponding dimensions. A small high-peaked black

cap is worn on the head, to accommodate the curious little cut-off pigtail, set up like a cock's comb, which appears to be one of the insignia of a Daimio's rank in Japan.

As soon as the people had arranged themselves into three sides of a square, Sir Harry Parkes read an address, and presented his five compatriots to the Mikado, who replied in inaudible but no doubt suitable terms. Then the Governor of Kobe had to read an address, and I pitied the poor man from the bottom of my heart. His knees shook, his hands trembled, and his whole body vibrated to such an extent, that his cocked hat fell and rolled on the floor of the dais, and finally hopped down the steps, while the address nearly followed its example. How thankful he must have felt when it was over!

The proceedings in the pavilion being now at an end, the Mikado walked down the middle of the assembly, followed by all his Ministers in single file, on his way to the luncheon tent. After they had gone, we inspected the imperial railway carriage, the soldiers, guns, &c., and just as we were leaving the station yard, a salute announced the departure of the Mikado for Kioto.

We lunched at the Consulate, our gentlemen changed to more comfortable attire, and then we went to see a Buddhist temple, supposed to be rather a fine specimen of woodwork. It is specially curious on account of some monkeys and a white horse, each kept in a sort of side shrine. Every worshipper at the temple stopped before these shrines, and for a small coin bought rice or beans to feed them with, through the priest.

From the temple we went to the shops in the main street of Hiogo, and full of interest and temptation we found them. The town itself is quite Japanese, and consists, as usual, of wooden houses, narrow streets, and quaint shops. To day all was *en fête*, in preparation for the illuminations to-night.

Kobe, the foreign settlement, is, on the contrary, brand-new, spick and span, with a handsome parade, and grass and trees, planted boulevard fashion, along the edge of the sea. It is all remarkably clean, but quite uninteresting. To-night, however, it looked very well, illuminated by thousands and thousands of coloured paper lanterns, arranged in all sorts of fanciful devices. It was dark and clear, and there was no wind, so that everything went off well.

A Family Group.

A.Y.B.

Tuesday, February 6th.—Half our party started early for Kioto. It was a wet, cheerless day, and the country did not look its best. Still, the novelty of the scenes around could not fail to make them interesting. The Japanese have an intense horror of rain, and it was ludicrous to see the peasants walking along with scarcely any clothes on except a pair of high clogs, a large hat, and a paper umbrella. We crossed several large bridges, stopped at a great many stations, where heaps of native travellers got in and out, and finally reached Kioto at half-past two o'clock. It was still raining, and all the *jinrikisha* men wore their large rain hats and rain cloaks, made either of reeds or of oiled paper. Most of the *jinrikishas*, too, had oiled paper hoods and aprons.

The drive to our hotel, through long, narrow, crowded, picturesque streets, seemed long and wearisome. It was still a holiday, and remains of the previous night's illuminations were to be seen on all sides. The large paper lanterns still remained fastened to the high poles, with an open umbrella at the top to afford protection from the rain.

Kioto is a thoroughly Japanese town. I do not suppose it contains a single European resident; so that the manners and customs of the natives may be seen in perfection. Its theatres and jugglers are famous throughout Japan. In the suburb, where the two hotels are situated, stand numberless tea-houses and other places of entertainment. Our hotel is situated half-way up the hill called Maruyama.

After about three-quarters of an hour's ride in the *jinrikisha*, we were deposited at the bottom of a flight of steps, which appeared to lead to a temple, but by which we reached the hotel in about five minutes. We were received by servants, who bowed to the ground, but who did not speak a word which we could understand. The rooms looked clean and comfortable, and the dining-room boasted a table and six chairs, besides several screens and *hibatchis*. The bed-rooms, too, had beds, screens, and washstands; quite an unexpected luxury. Still more so was a strip of glass about half-way up the screens, through which we could admire the fine prospect. Anything in the shape of a transparent window is a complete novelty in a Japanese house, where, in winter, you feel as if you were imprisoned. The view from the verandah of the hotel over the pretty fantastic garden, the temple grounds, the town of Kioto, and the mountains in the distance was an endless source of delight to me.

After luncheon we sallied forth again to see what we could before dark. First we went to the temple of Gion,

a fine building, standing in extensive grounds, and surrounded by smaller temples and houses for the priests. The Dutch envoys used to stay here when they were brought through the country, like prisoners, to pay their annual tribute for being allowed to trade with Japan. They were subjected to all kinds of indignities, and used to be made to dance and sing, pretend to be drunk, and play all sorts of pranks, for the amusement of the whole court as well as for the Mikado and the empress, hidden behind a grating.

From Gion we went to see other temples, and wandered about under the large conifers of all kinds, trying to find out the quarters of the British Legation, for some time, until Sir Harry Parkes returned.

He has had, I fear, a great deal of trouble about the yacht. She is the first vessel of the kind ever seen in Japan, with the exception of the one sent out in 1858 as a present from the Queen to the then Tycoon, and now used by the Mikado. The officials, it seems, cannot make the 'Sunbeam' out. 'Is she a man-of-war? We know what that is.' 'No.' 'Is she a merchant ship?' 'No; she is a yacht.' But what can be the object of a vessel without guns is quite beyond their comprehension. At last it has been settled that, in order to be like other nations, the Japanese officials will not force us to enter at the Custom House, or to pay a fine of sixty dollars a day for not doing so. As a matter of precedent, it was important that the point should be settled, though I hardly imagine that many yachts will follow our example, and come out to Japan through the Straits of Magellan and across the Pacific.

As it was now growing late, we returned to the hotel for dinner.

Sir Harry Parkes came and spent the evening with us and taught us more about Japan in two or three hours than

we could have learned by much study of many books. The fact is, that in this fast-changing country guide-books get out of date in two or three years. Besides which, Sir Harry has been one of the chief actors in many of the most prominent events we have recently been reading about. To hear him describe graphically the wars of 1868, and the Christian persecutions in 1870, with the causes that led to the revolution, and the effect it has had on the country, was indeed interesting. Still more so was his account of his journey hither to force the newly emerged Mikado and his Ministers to sign the treaty, which had already received the assent (of course valueless) of the deposed Tycoon.

Wednesday, February 7th.—A misty but much warmer morning succeeded a wet night. At 8.30 Sir Harry Parkes and two other gentlemen arrived, and we all started at once in *jinrikishas* to see what could be seen in the limited time at our disposal. We went first to the temple of Gion Chiosiu, described elaborately in books by other travellers. It is specially interesting to Europeans, as it was the temple assigned to the foreign envoys when they paid their first visit to the Mikado in 1868. Sir Harry Parkes showed us all their apartments, and the large though subsidiary temple once used as a hospital, and we afterwards went to see the service performed in the temple. A dozen bonzes, or priests, were sitting round in a circle, chanting monotonously from ponderous volumes, with an occasional accompaniment from a gong or drum. Incense was being burned, vestments worn, processions formed, and prayers offered to Buddha to intercede with the Supreme Being.

One of the late acts of the government has been to declare the Shintoo, as the old religion of the country, to be the only State faith. This is the disestablishment of Buddhism, but it does not imply its suppression. The Buddhist priests complain very much, saying that their

temples are not now so popular, and many are being closed.

We strolled about the temple grounds, and ascended the hill to see the famous bell, which is the second biggest in Japan. The immense beam which strikes it was un-lashed from the platform for our edification, and the bell sent forth a magnificent sound, pealing over the city and through the woods. At one of the gates there is a curious staircase, leading up to the top, and there, over the gate, is seated a figure of Buddha, surrounded by twelve disciples, all carved in wood and coloured. They are quite worth a scramble up to see.

From Chiosiu we went right across the city to the temple of Nishni Hongangi. On our way we were more than once stopped and turned off the direct road, which was kept by soldiers for the passage of the Mikado to worship at the tombstone of his innumerable ancestors, real or imaginary. Being a spiritual Emperor, he has to be well kept up to his religious duties, and is always being sent off to worship at some shrine or another, in order to maintain his popularity with the people, his Ministers meanwhile managing the affairs of state. Tanjo and Ikawura went off in haste to-day to Tokio, as there are rumours of a rebellion in the south.

Nishni Hongangi is one of the largest and finest temples we have yet seen, even in spite of a large portion having been destroyed by the disastrous fire of 1864. The gates are splendidly ornamented with carved chrysanthemum flowers. The centre temple is very fine, and is surrounded by smaller rooms, all decorated by the best Japanese artists of about two hundred years ago. Notice had been sent that the English Minister was coming with a party of friends, and everything had accordingly been prepared for our reception. In some places they had even put down carpets, to obviate the necessity of our having to take off

our boots. The Abbot was out, which I much regretted, for he belongs to the Montos, the most advanced sect of Buddhism, and has more than once remarked to English visitors that he thought their own principles were so enlightened that they were paving the way for a higher form of religion, in the shape of Christianity—rather a startling confession to come from the lips of a Buddhist priest.

After spending a long time among the paintings, wood-carvings, lacquers, bronzes, and gardens, we left the temple, and crossed several court-yards before the main street was reached. Then, after a short walk, we came to another beautiful garden, laid out like a miniature park, with lakes, bridges, rocks, streams, canals, pavilions, &c. All these surround a house built by the celebrated Tycoon, Tako Sama, in the fifteenth century. Here, again, everything was prepared for our reception. Fires were lighted, flowers arranged, carpets laid down, and fruit and cakes placed in readiness, with *hibatchis* to warm each and all of us. We went all over the house, which differs little from a Japanese house of the present day, except that a higher style of art was employed in its construction and decoration.

From here we went to quite another quarter of the city, to see what was formerly the Tycoon's palace, now used as a sort of police office. It is built on the same plan of three enclosures as all the *yashgis*, though on a very different scale from the one at Tokio. There the Tycoon reigns in undisturbed sovereignty. Here he appears as a humble servant of his rightful master—really his prisoner. The late Tycoon, after the last battle, fought at this place, fled to his castle at Osaka, where, though he might have held out for an indefinite period, he preferred to surrender. Two of his Ministers came to him and represented that he must not only think of himself, but of the party who supported the Shogunate, and that as he had betrayed them by false hopes he had no

choice but to perform Hara-kiru. This he refused to do, although they set him the example ; and he is now living as a private individual on an estate in the country, not far from Tokio, where he amuses himself with hunting, shooting, and fishing. It is said that it is possible he may one day join the ministry of the present Mikado.

From the Tycoon's palace we drove to the 'Toshio,' or court quarter of the town, where the Mikado and all his relatives live, in palaces, surrounded by large gardens, enclosed in whitewashed walls. We saw the whole of Tako Sama's household furniture and wearing apparel, the celebrated swords of Yoritome, called the 'knee-cutter' and the 'beard-cutter,' from their wonderful sharpness, and many other interesting objects.

Here we said good-bye to Sir Harry Parkes, and returned across the town by another route to our hotel, after which we made another expedition to one or two more temples, and then to a pawnbroker's shop, in the heart of the city, which had been strongly recommended to us. The exterior did not look promising ; the shop itself was small and dirty ; and they had to take some very filthy garments out of the way before we could enter. Once inside, however, it was a very different story. They showed us splendid old embroideries, and quantities of second-hand court dresses, embroidered in gold, silver, and colours, with exquisite designs. The Empress has thirteen ladies of honour, who wear their best dresses only twice, and then sell them : hence the pawnbroker's abundant stock.

Wherever we went a large but perfectly civil crowd followed us, and people ran on before to tell others to come to their doors and look at us, though we were under the charge of an officer and two men. It was now getting dark, and we were very tired ; so we at last turned back, and once more climbed those weary steps to our hotel.

To-night there is some *fête* going on in this suburb, and the whole place is alive with lights, dancing, music, and tum-tums.

Thursday, February 8th.—The sunrise over the city, with the river and mountains beyond, was superb. We breakfasted at eight; but even by that hour the courtyard and passage were crowded with vendors of curiosities of all sorts, and no doubt great bargains might have been picked up. But we had no time to lose, for our train started at 9.30, and we had a delightfully rapid drive to the station through the sunny streets of Kioto.

Arrived at Kobe, we went first to lunch with some friends, and immediately after hastened on board to receive the foreign Ministers and other friends; and did not land again that evening.

Friday, February 9th.—We left by ten o'clock train for Osaka, which has been called the Venice of Japan. It is intersected by innumerable rivers and canals, and boats were continually making their appearance at points where they were least expected, as our *jinrikisha* men hurried us along the narrow and not very sweet-smelling streets. We went so fast that, more than once before we reached the Mint, I thought we should have been tipped into one of the canals, as we turned a sharp corner.

At last we left the river and town, and, climbing a slight eminence, crossed the first moat by a stone bridge, and reached the guard-house on the other side. There was some hesitation at first about admitting us; but it was soon overcome. This castle, the last stronghold of the Tycoon, is built on exactly the same plan as the *yashgi* we had already visited, but much stronger, being composed of enormous blocks of stone. One wonders how human labour could ever have transported them from their quarry to this place, for some measured 40 ft. long by 20 ft. high. We crossed the three moats and the three enclo-

tures, now all full of barracks and soldiers. In the very centre the old well and a little square tower are still standing, part of the Tycoon's original residence, which was destroyed by fire. The view from the top over the town and surrounding country is very fine. You can see countless streams coming from the mountains, and flowing into Odawarra, on which Osaka is situated. The course of the river itself could be traced to the bay ; and the line of coast to Kobe, and the far-off mountains in the Inland Sea were plainly visible.

The Imperial Mint of Japan is a large handsome building, in great force just now, for the whole of the old money is being called in and replaced by the government. The contrast between the two moneys is very great. The ancient coinage consisted of long thin oval obangs and shobangs, worth from two dollars to eighteen pounds each, square silver itzeboos, and square copper pieces, with a hole in the centre ; while that which is taking its place is similar to European coinage, and is marked in English characters, and ornamented with Japanese devices, such as the phoenix and the dragon. It did not seem worth while to go minutely over the Mint, as it is arranged on exactly the same principle as the one in London, and the processes are carried out in the same manner.

Osaka used to be the emporium of all the inland commerce, and was considered the pearl of Japanese cities. After the revolution, and when the Mint was built, there was some intention of making it the capital of the empire. That idea was, however, abandoned ; and the inconvenience of having the Mint so far away from the seat of government is greatly felt, all the bullion having to be sent backwards and forwards at great expense by sea. Commerce has now almost deserted Osaka, owing to the difficulty experienced by large ships in anchoring near the town, and the impossibility of their crossing the bar.

The foreign consuls and representatives have all left the place for the newly established settlement at Kobe, where they feel safer, with men-of-war at anchor just under their windows.

There was just time to go round some of the old streets, and to some of the shops, before the hour by which we were due at the station. Osaka is famous for its wax-works and theatres. Five of the best of these have, however, been burnt down within the last eighteen months, with terrible loss of life.

We reached Kobe about seven o'clock, and went on board at once.

Saturday, February 10th.—We were to have gone early this morning to Arrima, a village in the mountains, situated among groves of bamboos, where there are mineral springs and a hot-water bath, in which people bathe in the old style. But the weather was impossibly bad for our intended expedition, with showers of snow and sleet. We waited till half-past eleven, and then landed and talked of going to Osaka again by train; but finally decided that even this was not practicable, and that we had better stay and potter about at Kobe and Hiogo. We visited several pawnbrokers' shops, at all of which there was something interesting to be seen. Many are perfect museums; but their proprietors never seem to care much to show you what they have, unless you are accompanied by a resident or some one they know. Then they invite you into the iron fire-proof 'godown' or store, at the back, and out of funny little boxes and bags and parcels produce all sorts of rare and curious things which have been sent to them to be sold, or which they may possibly have bought themselves. It is not of the slightest use to go to the large shops, full of things, if you want anything really good, for you will only find there articles specially prepared for the European and American market.

I am very glad to hear that Dr. Dresser is here, collecting, lecturing, and trying to persuade the Japanese to adhere to their own forms and taste in art and decoration. It is a great pity to observe the decadence of native art, and at the same time to see how much better the old things are than the new. A true Japanese artist never repeats himself, and consequently never makes an exact pair of anything. His designs agree generally, and his vases are more or less alike, without being a precise match. He throws in a spray of flowers, a bird, or a fan, as the fancy strikes him, and the same objects are therefore never placed in exactly the same relative position. Modern articles are made precisely alike, not only in pairs, but by the dozen and the hundred.

There are beautiful bantams to be seen in some of the shops here; but they cannot be bought, as they are private pets. They seem generally very small, and one I saw to-day had his head far behind his tail, which divided in the middle outwards, and fell forward on either side of his neck in the most extraordinary way. How he picked up his food and got through life, I am sure I don't know. There are plenty of little Japanese dogs; but they are not seen to advantage this cold weather, and there would be great difficulty in getting them home.

I bought some fine bantams at Yokohama, and a whole cage full of rice-birds. They are the dearest little things, and spend most of the day bathing and twittering, occasionally getting all together into one nest, with their twenty-five heads peeping out. They are exactly like a magnified grain of rice, with legs and a bill. We have also some mandarin ducks on board, and some gold and silver fish with two tails. Our sailors have over a hundred birds of their own, which never appear on deck, except on very sunny days. I don't know where they

can keep them, unless they stow them away in their Japanese cabinets.

Sunday, February 11th.—About 7 a.m. two Japanese officers came on board with a message which nobody could understand. When we went on deck, we saw that all the ships were dressed, and concluded that we had been asked to do the same; but we thought it better to send ashore to ascertain positively. The next difficulty was to get a Japanese flag. Tom went on board the 'Thabor,' a Japanese ship, to borrow one, and found everything was in bustle and confusion, news having arrived from Kiusiu that the rebels were mustering in great force, and that they had seized some ships. The 'Thabor,' 'Mihu Maru,' and three others, are therefore to go through the Inland Sea to Nagasaki this afternoon.

The Japanese admiral sent word early this morning that he would come on board at two o'clock with some of his captains, and the French admiral also expressed a hope that it would be convenient to receive him and his captains at three. Their visits occupied nearly all the afternoon. We afterwards landed with the French admiral, paid some farewell visits, and went to look at a collection of old lacquer and Satsuma china, before we returned to the yacht.

CHAPTER XXI.

THE INLAND SEA.

*Dipped in the lines of sunset, wreathed in zones,
The clouds are resting on their mountain thrones ;
One peak alone exalts its glacier crest,
A golden paradise above the rest.
Thither the day with lingering steps retires,
And in its own blue element expires.*

Monday, February 12th.—Fires were lighted at 4 a.m., and by six we were steaming slowly out of the beautiful bay of Kobe. It was a cold bright morning, with a strong head wind, increasing every moment as we proceeded, until, in the straits of Akashi, it became almost impossible to make any way against it. There was not much sea, but the wind impeded our progress so much, that it was at last reduced to one mile instead of nine an hour. The straits are very fine, and the old castle presents an admirable specimen of the architecture of a Daimio's residence.

We proceeded across the Harima Nada, where we were more or less exposed to the open sea, and where we took more water on board than we had done in the gale before arriving at Yokohama. There were no big waves, but we rolled tremendously, and the spray came over us, though the mere force of the wind seemed to keep the sea down.

After struggling until twelve o'clock, and having done but little good for the last three hours, we determined to run back, and in a short time found ourselves once more at anchor in the harbour of Kobe. It was a work of considerable difficulty, owing to the strong wind and tide, to steer safely among the numerous vessels, and for a few minutes we thought we were aground, as we did not make the slightest progress, though the engines were working ahead full speed. The proveedor's boat came out to us as soon as we were perceived, and we landed in her; but it was as much as the six stout oarsmen could do to make way against the wind.

We went for a walk, or rather a scramble, to the waterfall, half-way up to the Temple of the Moon. Much of the ground was covered with snow, the streams were frozen at the sides, and there were hanging icicles to be seen, six feet in length; and yet on either side were camellias and tea-trees covered with red and white blossoms, orange-trees laden with fruit; gold-fish swimming about in ponds, overhung with maidenhair fern, besides pteris and hothouse ferns, shaded by bamboos, palms, and castor-oil plants. The order of vegetation seems to be as much reversed as everything else in this strange country. In England all those plants would require conservatories, or at least sheltered spots, and the greatest care, instead of being exposed to frost and snow.

Getting on board again was even a more difficult business than landing had been; but we arrived at last without mishap.

Tuesday, February 13th.—The wind dropped at sunset, and as it continued calm all night, Tom ordered fires to be lighted at 4 a.m. By six o'clock, however, it was blowing harder than ever, and we therefore decided to make an excursion to Arrima instead of attempting another start.

We went ashore to make the necessary arrangements, and it was settled that we should start at ten o'clock, which we did, with the Consulate constable as our guide.

We had three men to each *jinrikisha*, and went along at a merry pace through the long straggling towns of Kobe and Hiogo. The cold was intense, and before we started our poor *jinrikisha* men were shivering until they nearly shook us out of the vehicles. Soon they were streaming with perspiration, and at our first halting-place they took off almost all their garments, though it was as much as we could do to keep warm in our furs and wraps. We waited while they partook copiously of hot tea and bowls of rice, and bought new straw shoes, or rather sandals, for less than a farthing a pair.

To-day being the Japanese New Year's Day, all the little shrines in the houses and along the road were prettily decorated, and had offerings of rice, *saki*, and fruit deposited upon them. The spirits of the departed are supposed to come down and partake, not of the things themselves, but of the subtle invisible essence that rises from them. The road now became very pretty, winding through the valleys, climbing up and dipping down the various hills, and passing through picturesque villages, where all the people, leaving their meals or their games, came out to look at us, while some of the children scampered on to secure a good view of the foreigners, and others ran away frightened and screaming. They were all dressed in dark blue clothes, turned up with red, with bright embroidered *obis* and flowers in their elaborately dressed hair.

In rather more than three hours we reached Arrima, a village far more beautifully situated than any we had seen, in the very centre of the mountains, where a dozen valleys converge into one centre. On one side are mineral

springs, on the other a river. Bamboos grow luxuriantly on all sides, and the inhabitants of the various valleys obtain their livelihood by manufacturing from them all sorts of articles : boxes for every conceivable purpose ; baskets, fine and coarse, large and small, useful and ornamental, coloured and plain ; brushes, pipes, battledores and shuttlecocks, sticks, spoons, knives and forks, sauce ladles, boats, lamps, cradles, &c.

The first glimpse of the village is lovely ; that from the bridge that crosses the river is still more so. We clambered up narrow streets, with quaint carved houses and overhanging balconies, till we reached a tea-house, kept by a closely shaven bonze, or priest. He seemed much pleased to see us, and bowed and shook hands over and over again. He placed his whole house at our disposal, and a very clean, pretty, and well-arranged house it was, with a lovely little formal garden, ornamented with mimic temples and bridges of ice, fashioned by the hard frost, with but little assistance from the hand of man.

Every house and shop in those narrow picturesque streets was a study in itself, and so were the quaint groups of people we met, and who gazed eagerly at us. We looked into the public baths, two oblong tanks, into which the mineral springs came bubbling up, thick and yellow, and strongly impregnated with iron, at a temperature of 112°. They are covered in, and there is a rough passage round them. Here, in the bathing season, people of both sexes stand in rows, packed as tight as herrings in a barrel, and there are just as many outside waiting their turn to enter. To-day there were only two bathers, immersed up to their chins in the steaming water. They had left all their clothes at home, and would shortly have to pass through the streets without any covering, notwithstanding the cold.

From the baths we went to some of the best basket shops, where the beauty and cheapness of the articles exposed for sale offered great temptations. We had to disturb our *jinrikisha* men, who were enjoying their frugal meal at a separate tea-house. It was beautifully served, and as clean and nicely cooked as possible. Each man had his own little table and eight or ten separate dishes, a bottle of *saki*, tea-pipe, and *hibatchi*, arranged exactly as ours had been at the tea-house at Yokohama. How

A. Y. B.

Arrima. The Village of Bamboo Basket Work.

well they managed their chop-sticks, how quickly they shovelled the food down, and how clean they left each dish! Habit is everything.

Wednesday, February 14th.—We were called at 4 a.m. Fires were lighted, but before steam was up the wind had risen; so our start was once more postponed to the afternoon. We steamed out to the buoy, from among the shipping, in order to be able to get away more easily at night.

After breakfast we went ashore. The streets were crowded with holiday-makers; for to-day is the first of the Chinese new year, as yesterday was the first of the Japanese new year. The floor of the theatre, to which we went, was crowded with people, all squatting on their heels, each with his or her chow-chow box and *hibatchi* or brazier of burning charcoal to keep themselves warm. The performance frequently goes on for ten or twelve hours, with short intervals, and whole families come and take up their abode at the theatre for twelve hours at a time. The acting was not at all bad, and the performers were beautifully dressed.

From the theatre we went to the Consulate, where we found the chief of the police of the foreign settlement waiting for the Consul, to inform him that Japanese soldiers were patrolling the town with fixed bayonets, alleging that information had been sent to the Governor that some of the rebels were in the hills at the back of the town, and might appear at any moment. The ships-of-war were to be communicated with at once for the protection of the inhabitants. They do not expect a general attack here, but seem to think the rebels' plan is to creep up by degrees to Osaka, where the Mikado is shortly expected to stay, and take possession of his person and the imperial treasure at one blow.

When I got on board the 'Sunbeam' again, I found that steam was up and all was ready for starting; but the wind was still strong against us, and it was evidently necessary again to wait until four o'clock to-morrow morning.

Thursday, February 15th.—At 2.30 a.m. I was awakened by a great noise and a loud cry of 'The ship is on fire!' followed by Mr. Bingham rushing into our cabin to arouse us. At first I could hardly realise where we were, or what was happening. My first thought

was for the children, but I found they had not been forgotten. Rolled up in blankets, they were already in transit to the deck-house. In the meantime Mr. Bingham

had drenched the flames with every available jug of water, and Tom had roused the crew, and made them screw the hose on to the pump. They were afraid to open the hatches, to discover where the fire

The Yacht on Fire

was, until the hose and *extincteurs* were ready to work, as they did not know whether or not the hold was on fire, and the whole ship might burst into a blaze the moment the air was admitted. Allen soon appeared with an

extincteur on his back, and the mate with the hose. Then the cupboard in Mr. Bingham's room was opened, and burning cloaks, dresses, boxes of curios, portman-teaus, &c., were hauled out, and by a chain of men, sent on deck, where they were drenched with sea-water or thrown overboard. Moving these things caused the flames to increase in vigour, and the *extincteur* was used freely, and with the greatest success. It is an invaluable invention, especially for a yacht, where there are so many holes and corners which it would be impossible to reach by ordinary means. All this time the smoke was pouring in volumes from the cupboard on the other side, and from under the nursery fireplace. The floors were pulled up, and the partitions were pulled down, until at last the flames were got under. The holds were next examined. No damage had been done there; but the cabin floor was completely burnt through, and the lead from the nursery fireplace was running about, melted by the heat.

The explanation of the cause of the fire is very simple. As the night was bitterly cold, a roaring fire had been made up in the nursery, but about half-past ten the servants thought it looked rather dangerous and raked it out. The ashpan was not large enough, however, to hold the hot embers, which soon made the tiles red-hot. The woodwork caught fire, and had been smouldering for hours, when the nurse fortunately woke and discovered the state of affairs. She tried to rouse the other maids, but they were stupefied with the smoke, and so she rushed off at once to the doctor and Mr. Bingham. The former seized a child under each arm, wrapped them in blankets, and carried them off to the deck-house, Mabelle and the maids following, with more blankets and rugs, hastily snatched up. The children were as good as possible. They never cried nor made the least fuss, but composed themselves in

the deck-house to sleep for the remainder of the night, as if it were all a matter of course. When I went to see them, little Muriel remarked: 'If the yacht is on fire, mamma, had not baby and I better get our ulsters, and go with Emma in the boat to the hotel, to be out of the way?' It is the third time in their short lives that they have been picked out of bed in the middle of the night and carried off in blankets away from a fire, so I suppose they are getting quite used to it.

There can be no doubt that the preservation of the yacht from very serious damage, if not from complete destruction, was due to the prompt and efficient manner in which the *extincteurs* were used. It was not our first experience of the value of this invention; for, not very long before we undertook our present expedition, a fire broke out in our house in London, on which occasion the *extincteurs* we fortunately had at hand rendered most excellent service in subduing the flames.

By half-past three all danger was past, and we began to settle down again, though it took a long time to get rid of the smoke.

At four o'clock we weighed anchor, and once more made a start from Kobe, and passed through the Straits of Akaski. The wind was dead ahead, but not so strong as when we made our previous attempts. It was bitterly cold, the thermometer, in a sheltered place, being only one degree above freezing, and the breeze from the snowy mountains cutting like a knife.

We were all disappointed with our sail to-day; perhaps because we had heard so much of the extreme beauty of the scenery, and this is not the best time of year for seeing it. The hills are all brown, instead of being covered with luxuriant vegetation, and all looked bleak and barren, though the outlines of the mountain ranges were very fine. We were reminded of the west coast of

Scotland, the Lofoden Islands in the Arctic Circle, and the tamer portions of the scenery of the Straits of Magellan.

After passing through the Straits, we crossed the Harima Nada—rather a wider portion of the sea—and then entered the intricate channels among the islands once more. There are three thousand of them altogether, so one may take it for granted that the navigation is by no means easy. The currents and tides are strong, sunken rocks are frequent, and the greatest care is requisite.

We had one lovely view in the afternoon of the island of Yoken San, with its snowy mountain at the back, and a pretty little village, with a few picturesque junks in the foreground. The yacht passed between Oki Sama and Le Sama, steering straight for the cone-shaped little island of Odutsi. Towards dusk we made the light of Nabae Sinaon Yo Sina, and, steering past it, had to take several sharp and awkward turns, to avoid two reefs off Siyako and Usi Suria. Thus we threaded the St. Vincent's Channel, and, avoiding the Conqueror bank by another sharp turn, dropped anchor at Imo Ura, in Hurusima, precisely at 8.30 p.m.

Friday, February 16th.—Off again at 4 a.m. The scenery was much finer than yesterday, and the wind not quite so bitterly cold.

Saturday, February 17th.—At 3.15 a.m. we began to slow; at 3.45 the anchor was dropped near the lighthouse of Isaki, and we waited until daylight before proceeding through the Straits of Simono-seki. About nine o'clock a fresh start was made, under steam, but before long the wind freshened, and as soon as the anchorage near the town was reached we let go once more, near two men-of-war, who had preceded us from Kobe, but who were now wind-bound, like ourselves.

To our astonishment, we also saw a large ship from

Nova Scotia at anchor, the 'Mary Fraser,' although this is not a free port, nor within treaty limits. The gig was lowered at once, and we rowed alongside to gain what intelligence could be learned, as well as to ascertain what likelihood there might be of our obtaining fresh supplies here. The captain was very civil and kind, and volunteered to go on shore with us and act as our interpreter. We landed opposite a large tea-house, where we were immediately surrounded by a crowd of Japanese, who stared at us eagerly and even touched us, only through curiosity. A most amusing scene took place at one of the tea-houses, where we went to order some provisions for the yacht. It was rather a tedious process, and when we came out of the back room we found the whole of the front of the place filled by a gaping, curious crowd. The proprietor suggested that they should retire at once, and an abrupt retreat immediately took place, the difficulties of which were greatly augmented by the fact that everyone had left his high wooden shoes outside, along the front of the house. The street was ankle deep in mud and half-melted snow, into which they did not like to venture in their stockings; but how the owners of two or three hundred pairs of clogs, almost exactly alike, ever found their own property again I do not understand, though they managed to clear out very quickly. I believe Muriel and I were the chief objects of attraction. They told us that no European lady or child had ever been at Simono-seki before. It is not a treaty port, so no one is allowed to land, except from a man-of-war, without special permission, which is not often given; it is, besides, the key to the Inland Sea, and the authorities are very jealous about anyone seeing the forts. There is only one European resident here, connected with the telegraph; and a dull time he must have of it. The wire crosses the Straits a few miles higher up.

The streets appeared to be full of soldiers, patrolling singly and in pairs, with fixed bayonets. The temples were being used as barracks, and the principal buildings seemed to be strongly guarded; but otherwise everything appeared to go on as usual.

Sunday, February 18th.—We were awakened in the night by a heavy gale, with snow and sleet beating furiously on the deck. In the morning the land was covered with snow, the water froze as it was pumped on deck, and the bitter wind howled and whistled through the rigging. In the afternoon the wind even increased in violence, the snowstorms became more frequent, and the sky was dark and overcast.

Monday, February 19th.—The wind and weather became worse than ever, and, as time was precious, Tom decided to retrace our steps for a short distance and go through the Bungo Channel, between the islands of Sikok and Kiusiu, instead of going out to sea through the Simono-seki Straits, as, in the latter case, the gale would be right in our teeth, and we should make but little progress. Now we shall be under the shelter of Kiusiu and the Linschoten and Luchu islands for at least two days, and so make a fair wind of it. Steering due south, too, we may hope to be soon out of this horrid weather. The only drawback to this plan is that we shall miss seeing Nagasaki, which I much regret. There are no great sights there, but the scenery is pretty, and the place is interesting owing to the fact that it was the first, and for many years the only, port open to foreigners, and also the scene of the cruel murders of Christians and the site of the beautiful island of Pappenberg.

At 8.30 p.m. we weighed and proceeded under steam. The views of the mountains, between the snowstorms, were lovely, with the fresh-fallen snow shining in an occasional gleam of sunshine. We soon passed the Isaki

light, with wind and tide in our favour, and at sunset found ourselves in the open waters of the North Pacific.

Tuesday, February 20th.—A lovely day; the thermometer already twenty degrees higher than it was yesterday. The wind had dropped, and at 10 a.m. it had become so calm that fires were lighted.

It was delightful to see everybody and everything on board—people, children, animals, and birds, all and each sunning themselves, and trying to get thawed after the freezing they have had. We have unfortunately lost one of the Hawaiian geese, which I much regret, as it is irreplaceable. None have, I believe, ever been exported before. The pig from Harpe Island is very well. We have not seen him all the cold weather, as he has been buried in straw in a box, but they say that the cold has stopped his growth.

We were continually passing islands throughout the day, sometimes six or seven being in sight at one time, some with active and more with extinct volcanoes. We saw smoke issuing from three of the cones, but by night we were too far off to notice the flames.

Wednesday, February 21st.—The calm still continues. The sun is bright, the sky blue, and the atmosphere warm. During the night we passed Suwa Sima, Akuisi Sima, and Yoko Sima.

In the afternoon a light breeze sprang up; we stopped steaming, and before nightfall were bowling along smoothly at the rate of ten knots.

Thursday, February 22nd.—The same delightful breeze continued throughout the night and most of the day. By noon we had done 220 miles. Everybody had on summer clothes, and we all felt ourselves gradually expanding after being shrivelled up by the cold of the last month.

I should never recommend anybody to come to Japan

in the winter. You do not see it at its best, I am sure, and the scanty protection afforded by houses and carriages makes travelling a penance rather than a pleasure. Travellers, however, who wish to see Japan should do so at once; for the country is changing every day, and in three years more will be so Europeanised that little will be left worth seeing; or a violent anti-foreign revulsion of feeling may have taken place, and then the ports will be closed more strictly than they were even before the execution of the first treaty. Nothing that we can give them do they really want; their exports are not large; and they have learned nearly all they care to know from the foreigner. We have seen many of the European engineers of Japanese vessels, and they all agree in declaring that the natives learn to imitate anything they see done with wonderful quickness. These men also averred that in a few years there will not be a single foreigner employed in Japan, as the Japanese will be quite in a position to dispense with such aid; and although the Government pay foreigners in a high position exceedingly well, their service offers no career to a young man. His engagement is for so many years, and when his subordinates have learned to do the work he may go where he likes. I am bound to add that I have heard the contrary opinion equally strongly expressed; but the facts I have mentioned make me lean rather to the former than to the latter side of the story.

Saturday, February 24th.—At 1.35 we made the island of Ockseu, a capital landfall, and very satisfactory in every way; for the sky was too much overcast to get an observation, and the currents hereabouts are strong and variable. During the night the wind fell light, but we maintained a speed of from nine to ten knots.

Sunday, February 25th.—A much finer day. At 8 a.m. we had run 299 knots since the same time yesterday.

We met a large steamer and passed a brigantine ; also several Chinese junks. About twelve o'clock we saw a flag being waved frantically from a junk not far from us. At first we thought something was wrong with them ; but soon a small boat put off with three men, and we found, on its arrival alongside, that it contained a pilot anxious for a job. He was much disappointed, when we would not let him come on board ; but Tom always likes doing the pilotage himself. The boat was a rough wash-tub kind of affair, not much better than those used by the inhabitants of Tierra del Fuego and Patagonia.

About two o'clock we entered the tropics ; but the weather is now colder again, and not nearly so pleasant as it was two days ago. I suppose it is owing to the north-east monsoon.

Monday, February 26th.—At 4 a.m. we found ourselves close under the light on the eastern end of the island of Hongkong. We were surrounded by islands, and the morning was dark and thick ; so we waited till 5.30, and then steamed on through the Kowloon passage up to the city of Victoria, as it is really named, though it is generally called Hongkong. The channel is long, and in some places so narrow that it is like going through a mountain pass, with barren hills and rocks on either hand ; but the combined effect of the blue waters, and red, brown, and yellow hills, is very fine.

Off the town of Victoria the crowd of shipping is immense, and it became a difficult task to thread our way between the fleets of sampans and junks. The latter are the most extraordinary-looking craft I ever saw, with high, overhanging sterns and roll, or rather draw, up sails, sometimes actually made of silk, and puffed like a lady's net ball-dress. Then their decks are so crowded with lumber, live and dead, that you wonder how the boats can be navigated at all. But still they are much

more picturesque than the Japanese junks, and better sea boats. The sampans are long boats, pointed at both ends, and provided with a small awning. They have deep keels ; and underneath the floor there is one place for a cooking fire, another for an altar, and a third where the children are stowed to be out of the way. These sampans are the abodes of whole families. I never shall forget my astonishment when, going ashore very early one morning in one of these strange craft, the proprietor lifted up what I had thought was the bottom of the boat, and disclosed three or four children, packed away as tight as herrings, while under the seats were half-a-dozen people of larger growth. The young mother of the small family generally rows with the smallest baby strapped on to her back, and the next-sized one in her arms, whom she is also teaching to row. The children begin to row by themselves when they are about two years old. The boys have a gourd, intended for a life-preserver, tied round their necks as soon as they are born. The girls are left to their fate, a Chinaman thinking it rather an advantage to lose a daughter or two occasionally.

Many of these sampan people have never set foot on shore in their lives, and this water-life of China is one of the most extraordinary features of the country.

A lieutenant from the flag-ship came on board and piloted us into a snug berth, among the men-of-war, and close to the shore, where we were immediately surrounded by sampans, and pestered by pertinacious Chinese clamoring on board. The donkey-engine, with well-rigged hose, soon, however, cleared the decks, bulwarks, and gangways, and we were not bothered any more.

After breakfast we landed on the Praya, a fine quay, extending the whole length of the town. On it are situated many of the large stores, offices, and markets of the city. The streets are wide and handsome, and the

buildings in European style, with deep verandahs and arcades, all built of stone. The town is built on the side of a hill, with ferny, moss-covered banks, overhung by tropical trees, close to some of the principal offices. At the back are the mountains, the peak overhead, with the signal station on the top, always busily at work, making and answering signals with flags as ships and junks enter or leave the harbour. Soldiers and sailors abound in the streets; and if it were not for the sedan-chairs and palanquins, in which everybody is carried about by Chinese coolies with enormous hats, one might easily fancy oneself at dear old Gib., so much do these dependencies of the Crown in foreign countries resemble one another, even in such opposite quarters of the globe.

To-day for the first time, we have heard 'pidgin English' seriously spoken. It is very trying to one's composure to hear grave merchants, in their counting-houses, giving important orders to clerks and compradors in what sounds, until one gets accustomed to it, like the silliest of baby-talk. The term really means 'business English'; and certain it is that most Chinamen you meet understand it perfectly, though you might just as well talk Greek as ordinary English to them. 'Take piecey missisy one piecey bag topside,' seems quite as difficult to understand as 'Take the lady's bag upstairs' would be; but it is easier to a Chinaman's intellect.

From the Praya we went up the hill to write our names in the Governor's book. It was a beautiful road all the way, running between lovely gardens and beneath shady trees. Government House is a fine building, situated on a high point of land, commanding extensive views in every direction. After a pleasant chat we descended the hill again, and proceeded to the Hongkong Hotel for tiffin.

After this, a carriage was sent for us, and we drove to

the race-course. This is the fourth and last day of the races, and there is to be a ball to-night to wind up with, to which everybody seems to be going. The drive was a very pleasant one, the road presenting a most animated appearance, with crowds of soldiers, sailors, Chinamen, Parsees, Jews, all hurrying along by the side of the numerous sedan-chairs and carriages. We were puzzled to imagine where, on this rocky, hilly island, there could possibly be found a piece of ground flat enough for a race-course. But the mystery was solved when we reached a lovely little valley, about two miles from the town, where we found a very fair course, about the size of that at Chester, but not so dangerous. The grand stand is a picturesque object, with its thatched roof, verandahs, and sun-blinds. There are a lawn and a paddock attached, and very good temporary stables, over many of which are private stands and tiffin-rooms.

Hongkong races are a great event, and people come down from Canton, Shanghai, Macao, and all sorts of places for them. Some of the races were capital, the little Chinese ponies scuttling along at a great pace under their big riders, whose feet seemed almost to touch the ground. There was also a race for Australian horses. But the most amusing event of all was the last scramble for Chinese ponies ridden by Chinese boys, in which horses and riders seemed to be exactly suited to one another.

CHAPTER XXII.

TO CANTON UP THE PEARL RIVER.

*Sails of silk and ropes of sandal
Such as gleam in ancient lore,
And the singing of the sailors,
And the answer from the shore.*

Tuesday, February 27th.—At 10.30 we landed and went up the hill to breakfast with Sir Arthur and Miss Kennedy, and heard a good deal about the colony. It is wonderful to think that thirty years ago it scarcely existed, and now it is a large and flourishing place, with splendid houses, institutions, roads, and gardens. We were also most agreeably surprised by the beauty of the scenery. It is really lovely, and, though the hills around are barren, wherever cultivation has been attempted, vegetation appears to flourish luxuriantly. The climate cannot be very bad, judging by the healthy look of the residents and troops. Typhoons seem to be the greatest drawback. They come without any warning, and it is impossible to guard against them and their disastrous effects. Thousands of lives, and millions of pounds' worth of property, are destroyed in a few hours. We have been shown some of the effects of a very severe typhoon that occurred in 1874. It seems almost incredible that the mere force of the wind can snap iron posts in two, break granite columns, and blow off heavy roofs.

After breakfast the ceremony of presenting the departing Governor with a State umbrella took place. It was a token of respect from ten thousand Chinese inhabitants of Hongkong, and is the greatest compliment that can be paid to any official. It arrived in a large camphor-wood box, and the address, beautifully embroidered in gold thread and silk, was enclosed in a magnificent sandal-wood box about four feet long, covered with the richest carving. Precisely at twelve some forty vermilion-coloured visiting cards were handed in, with the name of each member of the deputation written in Chinese and English characters. The visitors were all received in a large drawing-room, whilst we ladies observed the proceedings through the doors leading from a smaller room. It is not considered etiquette by the Chinese for ladies to appear at these public ceremonies.

Wednesday, February 28th.—A large party of China merchants came as a deputation to invite Tom to fix a day to dine with them. I think they proposed to pay him what is for them an unusual compliment, partly because they were pleased with some remarks he made yesterday at Government House, and partly because they think so much of his enterprise in making a voyage round the world in a yacht with his wife and family. They examined everything on board, and seemed to be specially interested in Tom's Board of Trade certificate, which one of their number translated in full for the benefit of the rest.

The Chinese part of the town stands quite away from the foreign settlement. It is dirty and crowded in spite of its wide streets, and the large, gaily coloured houses have the names and advertisements of their proprietors painted all across them. The theatre is in the middle of the city, and was densely crowded. A box had been reserved for us, for the ordinary seats are like a carpenter's bench. On

the floor of the house men and women sat together, but in the galleries the men sat apart, and there were separate boxes for the women. The acting was rough, and accompanied by the most discordant music. The scenery seemed of an excessively rudimentary description, as you may imagine when I tell you that a steep hill up which the hero and heroine climbed with great difficulty was composed of five kitchen chairs arranged in a pyramid on the top of three kitchen tables, held in position by men in their ordinary dress. The fugitives were supposed to be a Tartar general and his wife, escaping from their enemies after a great battle. The fighting was renewed at intervals with great noise and spirit. Some of the costumes were very fine.

Thursday, March 1st.—A most lovely morning ushered in the new month, which, having come in like the most peaceable of lambs, will, we hope, not end like a roaring lion just as we expect to be in the middle of the Bay of Bengal. We left the yacht at 7.30, and went on board the 'Kin-Shan,' which is a regular American river steamer with beam engines and many deck-houses, which are painted white. The lower deck is crowded with the most inferior class of Chinese, some eight hundred of them being on board. It gave us rather a turn to see them all padlocked in under the hatchways and iron gratings. At each opening is posted an armed sentinel, ready to fire among the crowd in case of any disturbance. In the saloon, also, is a stand of pistols, and rifles with fixed bayonets, ready for the European passengers to defend themselves with, in case of emergency. These are very necessary precautions, on account of the numerous pirates who occasionally ship in disguise among the crowd, murder the passengers and crew, and take possession of the steamer. Not quite two years ago a vessel belonging to this same company was assailed in that way. The captain and

some of the passengers were murdered, and the ship was run ashore near Macao. But this voyage was more prosperous, the captain was most kind and polite, and the boat clean and comfortable.

On first leaving Hankow the course lies between islands and through fine mountain passes. Later on the country becomes flat and uninteresting till the Bogue Forts are reached. Here are to be seen the remains of the old forts knocked down by the French and English guns.

Bogue Forts.

About one o'clock we reached Whampoa, the leading port of Canton. The Pearl River is too shallow for large steamers to go up any higher; so we stopped here only a few minutes to disembark some of the Chinese passengers, and from this point the interesting part of the voyage began. The river, as well as all the little supplementary creeks, was alive with junks and sampans—masts and sails stuck up in every direction, gliding about among the flat paddy-fields. Such masts and sails as they are! The mandarins' boats, especially, are so beautifully carved, painted, and

decorated, that they look more as if they were floating about for ornament than for use. Just about two o'clock our large steamer was brought up close alongside the wooden pier as easily as a skiff, but it must require some skill to navigate this crowded river without accident. On the shore was an excited, vociferating crowd, but no one came to meet us; and we had begun to wonder what was to become of us—what we should do, and whither we should go in a strange city, where we did not know a soul—when we were relieved from our embarrassment by the appearance of the Vice-Consul, who came on board to meet a friend. He told us that, owing to an expected ball, all the houses were unusually full, and that not one of the people who had been written to could take us in. This was rather bad news, but we felt sure that something would turn up.

We landed, and, after proceeding a short distance along the dirty street, came to a bridge with iron gates, which were thrown open by the sentry. After crossing a dirty stream we found ourselves in the foreign settlement—Shameen it is called—walking on nice turf, under the shade of fine trees. The houses of the merchants which line this promenade are all fine, handsome stone buildings, with deep verandahs. At the back there are compounds with kitchen gardens, and under the trees dairy cows are grazing. Every household appears to supply itself with garden and farm produce, and the whole scene has a most English, home-like appearance. We went first to the Vice-Consul, and then to the Jardine Hong. All the business houses retain the names of the firms to which they originally belonged, even when they have passed into entirely different hands. After a little chat we went on to the Deacon Hong, where we found they had just done tiffin, and where we met some old friends.

By the kindness of various people, to whom we were introduced, we all found ourselves gradually installed in luxurious quarters.

About three o'clock we started in five chairs, with Man-look-Chin for our guide. Tom vigorously protested against not being allowed to use his own legs, but everybody assured him that it was impossible in the crowded streets of the city, so he had to submit to being carried. No Chinaman, except those employed by foreigners, is allowed to cross any of the bridges over the stream, which completely surrounds the foreign settlement, and makes the suburb of Shameen a perfect island. There are iron gates on each bridge guarded by sentries. The contrast in the state of things presented by the two sides of the bridge is most mar-

Chinese Pagoda and Boats

A. Y. H.

vellous. From the quiet country park, full of large villas and pretty gardens, you emerge into a filthy city, full of a seething, dirty population, and where smells

and sights of the most disgusting description meet you at every turn. People who have seen many Chinese cities say that Canton is the cleanest of them all. What the dirtiest must be like is therefore beyond my imagination. The suburbs of the city, where all sorts of cheap eating-shops abound—where the butchers and fishmongers expose the most untempting-looking morsels for sale, and where there are hampers of all sorts of nasty-looking compounds, done up ready for the buyer of the smallest portion to take home—are especially revolting. The Chinese, however poor, like several courses to their meals, which are served in little bowls on a small table to each person, and eaten with chop-sticks, as in Japan. It is to gratify this taste that what we should think a very minute fish, or a tiny chicken, is cut up into half-a-dozen pieces and sold to several purchasers.

The Chinese are very fond of fish, and are most ingenious in propagating, rearing, and keeping them. The dried-fish and seaweed shops are not at all picturesque or sweet-smelling, especially as all the refuse is thrown into the streets in front. Men go about the streets carrying pails of manure, suspended on bamboo poles across their shoulders, and clear away the rubbish as they go.

The streets of the city are so narrow, that two chairs can scarcely pass one another, except at certain points. The roofs of the houses nearly meet across the roadway, and, in addition, the inhabitants frequently spread mats overhead, rendering the light below dim and mysterious. Every shop has a large vermilion-coloured board, with the name of its occupant written in Chinese characters, together with a list of the articles which he sells, hung out in front of it, so that the view down the narrow streets is very bright and peculiar. These highways and byways are not unlike the bazaars at Constantinople and Cairo, and different wares are also sold in different localities after

the Eastern fashion. This is, in some respects, a great advantage, as, if you are in search of any particular article, you have almost an unlimited choice of whatever the town has to offer. But, on the other hand, if you want a variety of articles, it is an inconvenient arrangement, as you have to go all over the place to find them, and probably have to visit the most opposite quarters. We saw thousands of china vases, and bowls, and tea and dinner services, some very handsome, but many extremely poor. We visited an ivory shop, and saw some splendid specimens of carving. One man had been for fifteen months employed in carving on one side of an enormous elephant's tusk the representation of a battle scene, and on the other that of a thanksgiving procession. It will take him at least another year to finish the job.

From ivory carving, we went to a blackwood furniture shop, where we saw some very handsome things, by no means dear considering the amount of time and labour bestowed upon them. We finished up with the Temple of the Five Hundred Genii, whose five hundred carved wooden statues, thickly gilt, all very ugly, and all in different attitudes, stand round the statue of a European in sailor's costume, said to be meant for Marco Polo, but, whoever it may be, evidently considered an object at least of veneration, if not of worship.

Friday, March 2nd.—A long morning's work had been mapped out for us—thirteen sights before luncheon, then a visit to the French Consulate, followed by eight more objects of interest to be seen before we finally crossed the Pearl River to visit the Honan Temple. Quitting the pretty cool suburb by another bridge, we passed through streets quite as dirty as those of yesterday, until the heart of the city had been reached. We went first to the wedding-chair shop, where they keep sedan-chairs, of four qualities, for hire whenever a wedding

occurs. Even the commonest are made gorgeous by silver gilding and lacquer, while the best are really marvels of decorative art, completely covered with the blue lustrous feathers of a kind of kingfisher. In shape they are like a square pagoda, and round each tier are groups of figures. The dresses are also made of expensive feathers, but then they last for generations. There are no windows to these strange conveyances, in which the bride is carried to her future home, closely shut up, with joss-sticks burning in front of her. Recently there have been two sad accidents. In one case the journey was long, there was no outlet for the smoke of the joss-sticks, and when they arrived and opened the chair, the bride was found dead from suffocation. The other accident occurred through the chair catching fire while it was passing through some narrow street under an archway. The bearers became frightened, put down their burden, and ran away, leaving the poor bride locked up inside to be burnt to death.

From the chair shop we went to the embroiderers to see them at work. Their productions are exquisite, and it is a pity that better specimens are not seen in England. The process of lacquer-making, too, is very interesting. We had, however, to go from house to house to witness it, as only one portion of the process is carried on at each—from the gradual coating of the roughest wood with three coatings of varnish, until it is finally ornamented with delicate designs, and polished ready for sale. In appearance, price, and length of wear there is a vast difference.

The next thing to see was the weaving of silk, which is done in the most primitive manner. One man throws the shuttle, while another forms the pattern by jumping on the top of the loom and raising a certain number of threads, in order to allow the shuttle to pass beneath them.

Then came a visit to the Temple of Longevity, a large

Buddhist temple, with a monastic establishment of about ninety priests attached to it. It contains three shrines with large figures, but nothing specially interesting. There is a large pond in the midst of the garden, covered with duckweed, and full of beautiful gold and silver fish of many kinds. The Chinese certainly excel in producing gold and silver and red fish, which are the pets of every household, and are of all colours, some being striped and spotted, and boasting any number of tails, from one to five.

Outside the temple stands the Jadestone Market, where incredible quantities of this valuable stone change hands before ten o'clock every morning, both in its rough and its polished state. The stalls are the simplest wooden stands, and the appearance of the vendors is poor in the extreme. The contents of the stalls, however, are worth from 500*l.* to 1,000*l.* (not dollars), and there are hundreds of these stalls, besides an entire jadestone street which we afterwards visited. We saw several of the shops, and asked the prices, as we wished to take home a small specimen; but they had no good carved cups, which were what we wanted, and for what they had they asked an enormous price. Jadestone is a material very difficult to work, and in many cases the result attained is not worth the labour expended upon it.

After looking in at the goldbeaters at work, we next made our way to the temple of the Five Genii who are supposed to have founded the city of Canton. Being a Tartar temple, all the gods have a totally different cast of features, and are represented as Tartars with long beards. It is much frequented by women of all classes, and up and down the numerous flights of steps leading from one shrine to another, poor little women tottered and tumbled on their crippled feet, holding on to one another, or leaning on a stick. This temple is interesting as having been

the head-quarters of the allied forces during their occupation of Canton from 1858 to 1861. The great bell in front of its principal shrine has been broken by a shot.

We then went to see the Flowery Pagoda, built A.D. 512, but now deprived of many of its decorations. The Brilliant Pagoda, too, so called from having once been covered with snow-white porcelain, is now only a tall brick-pointed tower nine stories high.

By this time we all felt hungry, and began to wend our way towards the *yamun*. On the outskirts may be seen prisoners in chains, or wearing the *cangue*, imprisoned in a cage, or else suffering one of the numerous tortures inflicted in this country. I did not go to see any of these horrors, neither did I visit the execution ground; but some of the party did, and described it as a most horrible sight.

After luncheon we set out first to the Temple of the Sleeping Buddha, where there is a large, fat, reclining figure; then to the Temple of Horrors—most rightly named, for in a suite of rooms built round three sides of a large yard are represented all the tortures of the Buddhist faith, such as boiling in oil, sawing in pieces, and other horrible devices. The yard itself is crowded with fortune-tellers, charm-sellers, deputy prayer-sayers, beggars, and all sorts of natural horrors, exhibiting various deformities. Altogether it is a most unpleasant place, but still it is one of the characteristic sights of Canton.

From the Temple of the Sleeping Buddha we went up the height to breathe a little fresh air, and to see the five-storied pagoda at the spot where the allied forces had encamped, the Chinese groves in the White Cloud Mountains beyond, and to gain a general view of the densely crowded city beneath. It is all too flat, however, to be picturesque. The three *yamuns* at our feet, with their quaint towers, grand old trees, flags, and the broad Pearl

River on the other side of the city, are the only elements of positive beauty in the landscape.

We soon descended the heights again, and, passing the Cantonese Viceroy's *yamuns*, paid our promised visit to the French Consul. His residence is, if possible, more quaint and beautiful than that of the English representative. The trees are finer, especially one grand avenue leading from the outer gates to the private apartments. We were most kindly received, and shown a wonderful collection of embroideries and china. It was a delightful visit, but we could not remain so long as we wished, for we had to see the water clock. The tower in which it stands is approached by a flight of steps, and was built between the years A.D. 624 and 907; but it has been repaired, destroyed, and repaired again, several times, having suffered in the bombardment of the town by the allied fleets in 1857.

In the next street, Treasury Street (said to be the finest in Canton), you can buy burning-sticks measured to mark the time. They are extremely cheap, but perfectly accurate, and there seems little doubt that they have been used by the Chinese for thousands of years before the Christian era. Here, too, were the large spectacles so much worn; opium pipes, with all the paraphernalia for cleaning and smoking them; water pipes in pretty little shagreen cases, and many other curious articles in common use, of which we purchased specimens.

In the Feather Street are innumerable shops containing nothing but feathers of all kinds for mandarins, actors, and ordinary mortals; but the great ambition of every Chinaman is to have a feather from the Emperor. They are all called peacocks' feathers, one-eyed, two-eyed, or three-eyed; but, in reality, many are pheasants' feathers. Some of these are from six to eight feet in length, beauti-

fully marked. I bought two pairs over seven feet long. They are rather rare, as each bird has only two long feathers, and these are in perfection for but one month in the year. In this part of the town stands a Chinese restaurant where only cats' and dogs' flesh is served.

CHAPTER XXIII.

CANTON AND MACAO TO SINGAPORE.

*I remember the black wharves and the slips,
And the sea-tides tossing free ;
And Spanish sailors with bearded lips,
And the beauty and mystery of the ships,
And the magic of the sea.*

Saturday, March 3rd.—After some little delay we started about eleven o'clock, a party of seventeen in chairs. Men ran before to clear the way for us, shouting, yet we were more than an hour going right across the city. On our way we passed through the egg market, saw the pork fat market, and the poulterers' and fowlers' shops.

We managed to visit several shops for the sale of real Chinese furniture. It is very handsome, but curious in form, and, unless it is specially ordered, is made only for native use. Every Chinese reception-room is furnished in precisely the same manner, with very stiff high arm-chairs, arranged in two rows. A small four-legged square table stands between every two chairs, a larger table in the centre, and at the end an enormous sofa, big enough for six or eight people to lie full length across. The sofa and all the chairs have marble seats and backs, and the tops of the tables are also made of marble, or a sort of soapstone, on which may be distinguished natural landscapes slightly assisted by art.

In the bird market I saw numbers of little birds for sale, for the Chinese are very fond of pets, and often take their birds out in a cage with them when they go for a walk, just as we should be accompanied by a dog. They manage to tame them thoroughly, and when they meet a friend they will put the cage down, let the bird out, and give him something to eat while they have their chat. I saw this done several times.

Our road next led us through part of the butchers' quarter, where rats were hung up by their tails, and what looked very like skinned cats and dogs dangled beside them. Whole cages full of these animals were exposed for sale alive. Some travellers deny that the Chinese eat cats and dogs and rats, but there can be no question that they do so, though they may be the food only of the lower classes. Nor do 'puppy dogs' appear on the tables of the rich, except on one particular day in the year, when to eat them is supposed to bring good luck.

The fish here, as at Hongkong, are almost always kept alive in large tubs of water, with a fountain playing over them. They even keep some sea-fish alive in salt water. But it is in the north of China that they excel in rearing fish in large quantities. At Foo-chow cormorant fishing may be seen to great perfection, and it is said to be a very amusing sight.

At last the city gates were reached, and we once more found ourselves outside the walls, and able to breathe again. Here a halt was made, and several of the party got out of their chairs and walked, and we were able to chat, whilst we wended our way by a narrow path through nursery gardens and graveyards. In fact the whole of the White Cloud Mountain is one vast cemetery—it is the Chinese Holy of Holies, whither their bodies are sent, not only from all parts of China, but from all parts of the world. Frequently a shipload of 1,500 or 1,600 bodies

arrives in one day. The Steamboat Company charges 40 dollars for the passage of a really live Chinaman, as against 160 dollars for the carriage of a dead celestial. The friends of the deceased often keep the bodies in coffins above ground for several years, until the priests announce that they have discovered a lucky day and a lucky spot for the interment. This does not generally happen until he—the priest—finds he can extract no more money by divination, and that no more funeral feasts will be given by the friends. We passed through what they call the city of the dead, where thousands of coffins waiting for interment were lying above ground. The coffins are large and massive, but very plain, resembling the hollowed-out trunk of a tree. The greatest compliment a Chinese can pay his older relatives is to make them a present of four handsome longevity boards for their coffins. Outside the city of the dead were the usual adjuncts of a large burying-place—coffin-makers and stone-carvers, all living in dirty little cottages, surrounded by pigs, ducks, and young children.

By the time the city walls were reached, the rain had ceased, and a glorious red sunset glowed over the roofs, glinting through the holes in the mats, and lighting up all the vermilion boards and gold characters with which the houses and shops are decorated. The shadowy streets were now full of incense or rather joss-stick smoke, for every house and every shop has a large altar inside, and a small one without, before which joss-sticks are burnt more or less all day long.

The streets seemed more crowded even than usual. Each of our bearers struck out a line of his own, and it was not until we reached Shameen that we all met again. After dinner we examined an interesting collection, chiefly of coins, in process of formation for the French Exhibition. They are carefully arranged, and will be most

valuable and interesting when complete. The knife-and-fork coins are particularly curious and rare, some of them being worth as much as 5,000 dollars each, as curiosities. All the coins have holes in the centre for convenience of carriage.

Sunday, March 4th.—There is a fine cathedral at Sha-meen, in which the services are beautifully performed. A lady kindly lent us her house-boat, and after service we rowed across to Fa-ti, to see the gardens of Canton. They are laid out on an island a very short way up the river. The gardens are very wonderful, and contain plants cut into all sorts of shapes, such as men, birds, beasts, fishes, boats, houses, furniture, &c. Some are full-sized, others only in miniature. But almost all must have required considerable time and patience to reach their present growth, for their ages vary from 10 to 150 years. There are other plants not so elaborately trained, but the effect of the whole is rather too formal to be pretty. I managed to bring home some euphorbias, cut into the form of junks, and some banyan trees, one 100 and one 50 years old. I believe they are the first that have ever reached England alive and have flourished. Not far from Fa-ti are the duck-hatching establishments, and still further up the river are the duck sampans, where the crowds of ducks are reared. They are sent out every morning to get their own living and return at night. Until they learn to obey their keeper's call quickly the last duck is always whipped. I am told it is most ridiculous to see the hurry of the last half-dozen birds of a flock of some thousands of ducks. I was most anxious to see them, but it is not the right time of year now. The young ducks are only just beginning to hatch, and the old ones are not numerous, and are mostly laying.

There was no time to go and see the temple of Honan, for we were more anxious to avail ourselves of a chance of visiting some interesting places in the Chinese city. We

went through a street, consisting entirely of fruiterers' shops, to which the name of Kwohlaorn, or fruit-market, is applied. In this market, which is of great extent, there is for sale at all seasons of the year an almost countless variety of fruit.

A silkworm establishment was pointed out to us in the distance, but we did not go over it, as we had seen many before, and it is not the best season of the year. The silkworms are most carefully tended, the people who look after them being obliged to change their clothes before entering the rooms where they are kept, and to perform all sorts of superstitious ceremonies at every stage of the insect's growth. No one at all ailing or deformed is allowed to approach a building where they are kept. The worms are supposed to be very nervous, and are guarded from everything that can possibly frighten them, as well as from all changes of temperature or disturbances of the atmosphere. Thunder and lightning they are supposed specially to dread, and great pains are taken to shelter them by artificial means, and keep them from all knowledge of the storm.

The next place we visited was a bird's-nest-soup-shop street, where we went into one of the best and most extensive establishments. There were three or four well-dressed assistants behind the counter, all busily occupied in sorting and packing birds' nests. Some of the best were as white as snow, and were worth two dollars each, while a light brown one was worth only one dollar, and the black dirty ones, full of feathers and moss, could be purchased at the rate of a quarter dollar.

Certainly the Chinese seem an exception to the rule laid down by some writers, that no people can flourish who do not rest every seventh day. In many ways they are an abnormal people, one striking point in their condition being the state of dirt and filth in which they not

only exist, but increase and multiply. The children look healthy and happy too, in spite of these apparent draw-backs, and notwithstanding the fact that in many cases their poor little feet must be cruelly tortured by the practice of bandaging them tightly to make them small.

When we got back to Shameen there was time for a stroll along the Bund. It is very pleasant, for the river runs close under the parapet, and its surface is always covered with junks, sampans, and boats and ships, going swiftly up or down with the strong tide. The walk is shaded with trees, and seats stand at intervals all along it.

Monday, March 5th.—I was awake and writing from half-past four this morning; but before I got up, a woman who comes here every day to work brought me some

Chinese Foot and Boot.

small ordinary shoes which I had purchased as curiosities, and took the opportunity of showing me her feet. It really made me shudder to look at them, so deformed and cramped up were they, and as far as I could make out, she must have

suffered greatly in the process of reducing them to their present diminutive size. She took off her own shoes and tottered about the room in those she had brought, and then asked me to show her one of mine. Having most minutely examined it, she observed, with a melancholy shake of the head, 'Missisy foot much more good, do much walky, walky; mine much bad, no good for walky.'

Having said farewell to our kind hostess, we went off in the house-boat to the steamer. There was a great crowd on the lower deck—at least 900 Chinamen—to struggle through in order to reach the European quarters. We found other friends on board, who had come to see us off.

A few minutes before nine o'clock the bell rang as a signal for our friends' departure, and we steamed ahead, among such a crowd of sampans and junks that it was more like moving through a town than along a river. No accident, however, occurred, though one junk and one sampan had the very narrowest escape.

The voyage down took much longer than our voyage up, on account of the tide being against us, and in consequence we did not reach Hongkong until 3.30 p.m.

Tuesday, March 6th.—We went ashore at 7.30 to collect our purchases. We glanced at the museum too, which contains some curious specimens of Chinese and Japanese arms and armour, and the various productions of the two countries, besides many strange things from the Philippine and other islands. I was specially interested in the corals and shells. There were splendid conch shells from Manilla, and a magnificent group of Venus flower-baskets, dredged from some enormous depth near Manilla. There were also good specimens of reptiles of all sorts, and of the carved birds' heads for which Canton is famous. They look very like amber, and are quite as transparent, being carved to a great depth. I believe the bird is a kind of toucan or hornbill, but the people here call it a crane.

It was now time to say good-bye to Hongkong and to our kind friends, for we had to go on board the 'Flying Cloud,' which starts for Macao at two o'clock precisely, and our passages had been taken in her. We went out of the harbour by a different way, and passed along a different side of the island of Hongkong; but the scenery was not particularly interesting. Off Choolong a heavy ground-swell, called 'Pon choughai,' made us roll about most unpleasantly. In bad weather, or with a top-heavy ship, this passage could not be attempted. Sometimes there are very heavy fogs, and always strong currents, so

that the short voyage of forty-two miles is not absolutely free from danger.

The town of Macao is situated on a peninsula at the end of the island of the same name. It was the first foreign settlement in China belonging to the Portuguese, and was once a fine, handsome town, with splendid buildings. Unfortunately Macao lies in the track of the typhoons, which at times sweep over it with a resistless force, shattering and smashing everything in their career. These constantly recurring storms, and the establishment of other ports, have resulted in driving many people away from the place, and the abolition of the coolie traffic has also tended to diminish the number of traders. Now the town has a desolate, deserted appearance, and the principal revenue of the government is derived from the numerous gambling-houses.

We landed at the pier soon after five o'clock, and were carried across the peninsula through the town to the Praya on the other side. Here we found a large unoccupied mansion, situated in a garden overlooking the sea, and, having delivered our Chinese letters, were received by the comprador and the servants who had been left in charge of our friend's house. The rooms upstairs, to which we were at once shown, were lofty and spacious, opening into a big verandah. Each room had a mosquito room inside it, made of wire gauze and wood, like a gigantic meat-safe, and capable of containing, besides a large double bed, a chair and a table, so that its occupant is in a position to read and write in peace, even after dark. This was the first time we had seen one of these contrivances. Macao is a thoroughly Portuguese-looking town, the houses being painted blue, green, red, yellow, and all sorts of colours. It is well garrisoned, and one meets soldiers in every direction. We passed the fort, and went up to the lighthouse, which commands a fine

view over land and sea ; returning home by a different way through the town again, which we entered just as the cathedral bell and the bells of all the churches were pealing the Ave Maria.

Wednesday, March 7th.—We started soon after ten o'clock on another exploring expedition, going first in chairs through the town, and across the peninsula to where we left the steamer yesterday. Here we embarked—chairs, bearers, and all—in a junk, evidently cleaned up for the occasion, for it was in beautiful order, and mats were spread under an awning upon deck.

All along beneath the deck was a cabin, between two and three feet high, which contained the altar, the kitchen, and the sleeping and living apartments of the family. There was also a baby, two months old, which seemed to take life very quietly, while its mother assisted its grandfather to row.

We soon reached the island of Chock-Sing-Toon, and disembarked at a small pier near a village, which looked more like sampans pulled up on the shore than huts or cottages. The children and I rode in chairs, while the gentlemen walked, first over a plain covered with scrubby palms, then through miles of well-cultivated plots of vegetable ground, till we reached a temple, built at the entrance to the valley for which we were bound. Thence the path wound beside the stream flowing from the mountains above, and the vegetation became extremely luxuriant and beautiful. Presently we came to a spot where a stone bridge spanned the torrent, with a temple on one side and a joss-house on the other. It was apparently a particularly holy place, for our men had all brought quantities of joss-sticks and sacred paper with them to burn. There was a sort of eating-house close by, where they remained whilst we climbed higher up to get a view. The path was well

made, and evidently much used, judging from the large number of natural temples we found adapted and decorated among the rocks. As usual, our descent was a comparatively quick affair, and we soon found ourselves on board the junk on our way back to Macao, beating across the harbour.

Just before tiffin the yacht made her appearance, causing great excitement in the minds of the natives. The gig was soon lowered, and came as close as she could. There was not water enough for her to come within four miles of the shore, but we went out to meet her occupants. Tom, who was one of them, looked so ill that I felt quite alarmed for a few minutes, till the doctor comforted me by assurances that it was only the effect of the Chinese dinner last night. In their desire to do him honour, and to give him pleasure, his hosts had provided the rarest delicacies, and of course he felt obliged to taste them all. Some of the dishes were excellent, but many of them were rather trying to a European digestion, especially the fungus and lichen. One sort had been grown on ice in the Antarctic Sea, the whale's sinews came from the Arctic Ocean, the shark's fins from the South Sea Islands, and the birds' nests were of a quality to be found only in one particular cave in one particular island. To drink, they had champagne in English glasses, and arrack in Chinese glasses. The whole dinner was eaten with chopsticks, though spoons were allowed for the soup.

We went all round the town, and then to see the ruins of the cathedral, and the traces of the destruction caused by the typhoon in 1874. Next we paid a visit to the garden of Luiz de Camoens, the great Portuguese poet; he fought against the Moors, and in India in the sixteenth century, but was often in trouble, and was frequently banished or imprisoned. During his exile in Macao he wrote 'The Lusiads,' in which he celebrates the principal events in Portuguese history.

On reaching the yacht, after some delay in embarking, we slipped our anchor as quickly as possible, and soon found ourselves in a nasty rolling sea.

Thursday, March 8th.—When I went on deck at half-past six o'clock there was nothing to be seen but a leaden sky, a cold grey rolling sea, and two fishing junks in the far distance, nor did the weather improve all day.

Friday, March 9th.—Everybody began to settle down to the usual sea occupations. The wind was high and baffling all day. At night the Great Bear and the Southern Cross shone out with rivalling brilliancy: 'On either hand an old friend and a new.'

Saturday, March 10th.—A fine day, with a light fair breeze. Passed the island of Hainan, belonging to China, situated at the entrance of the Gulf of Tonquin, which, though very barren-looking, supports a population of 150,000.

About noon we passed a tall bamboo sticking straight up out of the water, and wondered if it were the topmast of some unfortunate junk sunk on the Paranella Shoal. There were many flying-fish about, and the sunset was lovely.

Sunday, March 11th.—We feel that we are going south rapidly, for the heat increases day by day. The services were held on deck at eleven and four.

Tuesday, March 13th.—About 2.30 a.m. the main peak halyards were carried away. Soon after we gibbed, and for two or three hours knocked about in the most unpleasant manner. At daybreak we made the island of Pulu Lapata, or Shoe Island, situated on the coast of Cochin China, looking snowy white in the early morning light.

The day was certainly warm, though we were gliding on steadily and pleasantly before the north-east monsoon.

Wednesday, March 14th.—The monsoon sends us along at the rate of from six to seven knots an hour, without

the slightest trouble or inconvenience. But there is an unexpected current, which sets us about twenty-five miles daily to the westward, notwithstanding the fact that a 'southerly current' is marked on the chart.

March 16th.—About noon Pulo Aor was seen on our starboard bow. In the afternoon, being so near the Straits, the funnel was raised and steam got up. At midnight we made the Homburgh Light, and shortly afterwards passed a large steamer steering north. It was a glorious night, though very hot below, and I spent most of it on deck, observing the land as we slowly steamed ahead half speed.

CHAPTER XXIV.

SINGAPORE.

*Betwixt them lawns, or level downs, and flocks
 Grazing the tender herb, were interpos'd,
 Or palmy hillock, or the flow'ry lap
 Of some irriguous valley spread her store,
 Flow'rs of all hues, and without thorn the rose.*

Saturday, March 17th.—We were off Singapore during the night. At 5 a.m. the pilot came on board and took us into Tangong Pagar to coal alongside the wharf. We left the ship as soon as possible, and in about an hour we had taken forty-three tons of coal on board and nearly twenty tons of water. The work was rapidly performed by coolies. It was a great disappointment to be told by the harbour-master that the Governor of the Straits Settlement and Lady Jervoise were to leave at eleven o'clock for Johore. We determined to go straight to the Government House and make a morning call at the unearthly hour of 8 a.m. The drive from the wharf was full of beauty, novelty, and interest. We had not landed so near the line before, and the most tropical of tropical plants, trees, flowers, and ferns, were here to be seen, growing by the roadside on every bank and dust-heap.

The natives, Malays, are a fine-looking, copper-coloured race, wearing bright-coloured sarongs and turbans. There are many Indians, too, from Madras, almost black, and swathed in the most graceful white muslin garments,

when they are not too hard at work to wear anything at all. The young women are very good-looking. They wear not only one but several rings, and metal ornaments in their noses, and a profusion of metal bangles on their arms and legs, which jingle and jangle as they move.

The town of Singapore itself is not imposing, its streets, or rather roads of wooden huts and stone houses, being mixed together indiscriminately. Government House is on the outskirts of the city in the midst of a beautiful park which is kept in excellent order, the green turf being closely mown and dotted with tropical trees and bushes. We found the Governor and his family did not start until 11.30, and they kindly begged us to return to breakfast at half-past nine, which we did. Before finally leaving, Sir William Jervoise sent for the Colonial Secretary, and asked him to look after us in his absence. He turned out to be an old schoolfellow and college friend of Tom's at Rugby and Oxford; so the meeting was a very pleasant one. As soon as the Governor and his suite had set off for Johore we went down into the town. There are not many Malay specialities to be bought here; most of the curiosities come from India, China, and Japan, with the exception of birds of Paradise from New Guinea, and beautiful bright birds of all colours and sizes from the various islands in the Malay Archipelago.

The north-east monsoon still blows fresh and strong, but it was nevertheless terribly hot in the streets, and we were very glad to return to the cool, shady rooms at Government House, where we thoroughly appreciated the delights of the punkah.

There are very few European servants here, and they all have their own peons to wait on them, and carry an umbrella over them when they drive the carriage or go for a walk on their own account. Even the private soldier in Singapore has a punkah pulled over his bed at night.

It is quite a sight to meet all the coolies leaving barracks at 5 a.m., when they have done punkah-pulling.

At four o'clock Mr. Douglas called to take us for a drive. We went first to the Botanical Gardens, and saw sago-palms and all sorts of tropical produce flourishing in perfection. There were many beautiful birds and beasts, Argus pheasants, Lyre birds, cuckoos, doves, and pigeons, more like parrots than doves in the gorgeous metallic lustre of their plumage. The cages were large, and the enclosures in front full of Cape jasmine bushes (covered with buds) for the birds to peck at and eat.

From the gardens we went for a drive through the pretty villas that surround Singapore in every direction. Every house outside the town is built on a separate little hill in order to catch every breath of fresh air. There is generally rather a long drive up to the houses, and the public roads run along the valleys between them.

Sunday, March 18th.—At six o'clock this morning we visited the market. It is a nice, clean, octagonal building, well supplied with vegetables and curious fruits. The latter are mostly brought from the other islands, as this is the worst season of the year in Singapore for fruit. I do not quite understand why this should be, for, as it is only a degree above the line, there is very little variation in the seasons here. The sun always rises and sets at six o'clock all the year round; for months they have a north-east monsoon, and then for months together a south-west monsoon.

We tasted many fruits new to us—delicious mangosteens, lacas, and other fruits whose names I could not ascertain. Lastly, we tried a durian, *the fruit of the East*, as it is called by people who live here, and having got over the first horror of the onion-like odour we found it by no means bad.

The fish market is the cleanest, and best arranged, and

sweetest smelling that I ever went through. It is situated on a sort of open platform, under a thick thatched roof, built out over the sea, so that all the refuse is easily disposed of and washed away by the tide. From the platform on which it stands, two long jetties run some distance out into the sea, so that large fishing boats can come alongside and discharge their cargoes from the deep at the door of the market with scarcely any exposure to the rays of the tropical sun.

The poultry market is a curious place. On account of the intense heat everything is brought alive to the market, and the quacking, cackling, gobbling, and crowing that go on are really marvellous. The whole street is alive with birds in baskets, cages, and coops, or tied by the leg and thrown down anyhow. There were curious pheasants and jungle-fowl from Perak, doves, pigeons, quails, besides cockatoos, parrots, parrakeets, and lories. They are all very tame and very cheap; and some of the scarlet lories, looking like a flame of fire, chatter in the most amusing way.

. Towards the end of the south-west monsoon, little native open boats arrive from the islands 500 to 1,500 miles to the south-eastward of Singapore. Each has one little tripod mast. The whole family live on board. The sides of the boat cannot be seen for the multitudes of cockatoos, parrots, parrakeets, and birds of all sorts, fastened on little perches, with very short strings attached to them. The decks are covered with sandal-wood. The holds are full of spice, shells, feathers, and South Sea pearl shells. With this cargo they creep from island to island, and from creek to creek, before the monsoon, till they reach their destination. They stay a month or six weeks, change their goods for iron, nails, a certain amount of pale green or Indian red thread for weaving, and some pieces of Manchester cotton. They then go back with the north-

east monsoon, selling their goods at the various islands on their homeward route. There are many Dutch ports nearer than Singapore, but they are over-regulated, and preference is given to the free English port, where the simple natives can do as they like so long as they do not transgress the laws.

As we were going on board, we met the Maharajah of Johore's servant, just going off with invitations to dinner, lunch, and breakfast for the next two days for all our party.

At four o'clock the carriage came round to take us to Johore. There is a capital road, fifteen miles in length, across the island, and our little ponies rattled along at a good pace. There was a pleasant breeze and not much dust, no sun, and a stream ran the whole way by the side of the road. The acacia flamboyante—that splendid tree which came originally from Rangoon and Sumatra—was planted alongside the road, and produced a most charming effect. It is a large tree, with large leaves of the most delicate green; on its topmost boughs grow gorgeous clusters of scarlet flowers with yellow centres, and the effect of these scarlet plumes tossing in the air is truly beautiful.

We reached the sea-shore about six-o'clock, and found the Maharajah's steam-launch waiting to convey us across the Straits to the mainland. These straits used to be the old route to Singapore, and are somewhat intricate. Johore is a charming place; the Straits are so narrow and full of bends that they look more like a peaceful river or inland lake in the heart of a tropical forest than an arm of the mighty ocean. As we approached we had observed a good deal of smoke rising from the jungle, and, as the shades of evening closed over the scene, we could see the lurid glare of two extensive fires.

We sat down thirty to dinner at eight o'clock. The

Maharajah and his native guests were all in English evening dress, with white waistcoats, bright turbans, and sarongs. The room was large and open on all sides, and the fresh evening breeze, in addition to the numerous punkahs, made it delightfully cool.

Monday, March 19th.—We drove through the old town of Johore, once of considerable importance, and still a place of trade for opium, indigo, pepper, and other tropical products. Nutmeg and mace used to be the great articles of export, but latterly the growth has failed, and, instead of the groves we had expected to see, there were only solitary trees. After leaving the town we went along a good road for some distance, with cottages and clearings on either side, until we came to a pepper and gambir plantation. The two crops are cultivated together, and both are grown on the edge of the jungle, for the sake of the wood, which is burned in the preparation of the gambir. I confess that I had never heard of the latter substance before, but I find that it is largely exported to Europe, where it is occasionally employed for giving weight to silks, and for tanning purposes.

The pepper garden we saw was many acres in extent. Some of the trees in the forest close by are very fine, especially the camphor-wood, and the great red, purple, and copper-coloured oleanders, which grow in clumps twenty and thirty feet in height. The orchids with which all the trees were covered, hanging down in long tassels of lovely colours, or spread out like great spotted butterflies and insects, were most lovely of all. By far the most abundant was the white phalænopsis, with great drooping sprays of pure white waxy blossoms, some delicately streaked with crimson, others with yellow. It was a genuine jungle, and we were told that it is the resort of numerous tigers and elephants, and that snakes abound.

On our way back through the town we stopped to see the process of opium-making. This drug is brought from India in an almost raw state, rolled up in balls, about the size of billiard balls, and wrapped in its own leaves. Here it is boiled down, several times refined, and prepared for smoking. The traffic in it forms a very profitable monopoly, which is shared in Singapore between the English Government and the Maharajah of Johore.

We also saw indigo growing; the dye is prepared very much in the same way as the gambir. That grown here is not so good as that which comes from India, and it is therefore not much exported, though it is used by the innumerable Chinese in the Malay peninsula to dye all their clothes, which are invariably of some deep shade of blue. We saw sago-palms growing, but the mill was not working, so that we could not see the process of manufacture; but it seems to be very similar to the preparation of tapioca, which we had seen in Brazil.

At half-past nine o'clock the Maharajah, with the Governor and all his guests, came on board. His Highness inspected the yacht with the utmost minuteness and interest, though his Mohammedan ideas about women were considerably troubled when he was told that I had had a great deal to do with the designing and arrangement of the interior. At half-past eleven the party left, and an hour afterwards we went to make our adieux to the Maharajah.

On our departure the Maharajah ordered twenty coolies to accompany us, laden with fragrant tropical plants. Having said farewell to our kind host and other friends, we pushed off from the shore, and embarked on board the yacht; the anchor was up, and by five o'clock a bend in the Straits hid hospitable and pleasant Johore from our view, and all we could see was the special steamer on her way back to Singapore with the Maharajah's guests on

board. At Tanjore we dropped our funny little pilot, and proceeded on our course towards Penang. The Straits are quite lovely, and fully repaid the trouble and time involved in the detour made to visit them. The sun set and the full moon arose over as lovely a tropical scene as you can possibly imagine.

Malacca looks exceedingly pretty from the sea. It is a regular Malay village, consisting of huts, built on piles close to the water, overshadowed by cocoa palms and other

Malacca.

A. Y. P.

forms of tropical vegetation. Mount Ofia rises in the distance behind ; there are many green islands, too, in the harbour. By one o'clock we were again under way, and once more *en route* for Penang.

Wednesday, March 21st.—During the night we had heavy thunder storms. About 11 a.m. we passed a piece of drift-wood with a bird perched on the top, presenting a most curious effect. Several of the men on board mistook it for the back fin of a large shark. About 5 p.m. we made the island of Penang. After sunset it became very hazy,

and we crept slowly up, afraid of injuring the numerous stake nets that are set about the Straits most promiscuously, and without any lights to mark their position. Before midnight we had dropped our anchor.

Thursday, March 22nd.—At 5 a.m., when we were called, the whole sky was overcast with a lurid glare, and the atmosphere was thick, as if with the fumes of some vast conflagration. As the sun rose in raging fierceness, the sky cleared, and became of a deep, clear, transparent blue. The island of Penang is very beautiful, especially in the early morning light. It was fortunate we did not try to come in last night, as we could now see that we must inevitably have run through some of the innumerable stake nets I mentioned. As we approached Georgetown, the capital of the province, we passed many steamers and sailing ships at anchor in the roads.

On landing, we drove out to one or two shops, but anything so hopeless as the stores here I never saw. Not a single curiosity could we find, not even a bird. We drove round the town, and out to the Governor's house; he was away, but we were kindly received by Mrs. Anson, who strongly recommended us to make an expedition to the bungalow at the top of the hill. In about an hour and a-half, always ascending, we reached the Governor's bungalow, situated in a charming spot, where the difference of 10° in the temperature, caused by being 1,500 feet higher up, is a great boon. After tiffin and a rest at the hotel, a carriage came to take us to the foot of the hill, about four miles from the town. We went first to a large Jesuit establishment, where some most benevolent old priests were teaching a large number of Malay boys reading, writing, and geography. Then we went a little further, and, in a small wooden house, under the cocoa trees, at last found some of the little humming birds for which the Malay Archipelago is famous. They glisten with a mar-

vellous metallic lustre all over their bodies, instead of only in patches, as one sees upon those in South America and the West Indies. The drive was intensely tropical in character, until we reached the waterfall, where we left the carriage and got into chairs, each carried by six coolies. The scenery all about the waterfall is lovely, and a large stream of sparkling, cool, clear water tumbling over the rocks was most refreshing to look at. Many people who have business in Penang live up here, riding up and down morning and evening, for the sake of the cool, refreshing night air. One of most curious things in vegetation which strikes our English eyes is the extraordinary abundance of the sensitive plant. It is interwoven with all the grass, and grows thickly in all the hedgerows. In the neatly kept turf, round the Government bungalow, its long, creeping, prickly stems, acacia-like leaves, and little fluffy mauve balls of flowers are so numerous, that walking up and down the croquet lawn, it appears to be bowing before you, for the delicate plants are sensible of even an approaching footstep and shut up and hide their tiny leaves among the grass long before you really reach them.

From the top of the hill you can see ninety miles in the clear atmosphere, far away across the Straits of Perak to the mainland. We could not stay long, and were carried down the hill backwards, as our bearers were afraid of our tumbling out of the chairs if we travelled forwards. The tropical vegetation is even more striking here, but, alas ! it is already losing its novelty to us. Those were indeed pleasant days when everything was new and strange ; it seems now almost as if years, not months, had gone past since we first entered these latitudes. We found the carriage waiting for us when we arrived at the bottom of the hill about seven o'clock, and it was not long before we reached the town.

The glowworms and fireflies were numerous. The natives were cooking their evening meal on the ground beneath the tall palm-trees as we passed, with the glare of the fires lighting up their picturesque huts, their dark figures relieved by their white and scarlet turbans and waist-cloth. The whole scene put us very much in mind of the old familiar pictures of India, the lithe figures of the natives looking like beautiful bronze statues, the rough country carts, drawn by buffaloes without harness, but dragging by their hump, and driven by black-skinned natives armed with a long goad. We went straight to the jetty, and found to our surprise that in the roads there was quite a breeze blowing, and a very strong tide running against it, which made the sea almost rough.

At eleven we weighed anchor, and were soon gliding through the Straits of Malacca, shaping for Acheen Head, *en route* to Galle.

Friday, March 23rd.—A broiling day, everybody panting, parrots and parrakeets dying. We passed a large barque with every sail set, although it was a flat calm, which made us rejoice in the possession of steam-power.

Saturday, March 24th.—Another flat calm.

Sunday, March 25th.—Hotter than ever. We passed a large steamer about 7.30 a.m., and in the afternoon altered our course to speak the 'Middlesex,' of London, bound to the Channel for orders.

Monday, March 26th.—The sun appeared to rise even fiercer and hotter than ever this morning.

About noon, when in latitude 6.25 North, and in longitude 88.25 East, we began to encounter a great deal of drift wood, many large trees, branches, plants, leaves, nautilus shells, back-bones of cuttlefish, and, in addition, large quantities of yellow spawn, evidently deposited by some fish of large size. The spawn appeared to be of a very

solid, consistent character, like large yellow grapes, connected together in a sort of gelatinous mass. It formed a continuous wide yellow streak perhaps half a mile in length, and with the bits of wood and branches sticking up in its midst at intervals, it would not have required a very lively imagination to fashion it at a little distance into a sea serpent. Where does all this *débris* come from? was the question asked by everybody. Out of the Bay of Bengal probably, judging from the direction of the current. We wondered if it could possibly be the remains of some of the trees uprooted by the last great cyclone.

At 1.30 p.m. a man cried out from the rigging, 'Boat on the starboard bow!' a cry that produced great excitement immediately; our course was altered and telescopes and glasses brought to bear upon the object in question. Every one on board, except our old sailing master, said it was a native boat. Some even said that they could see a man on board waving something. Powell alone declared it to be the root of a palm from the Bay of Bengal, and he proved right. A very large root it was, with one single stem and a few leaves hanging down, which had exactly the appearance of broken masts, tattered sails, and torn rigging. We went close alongside to have a good look at it; the water was as clear as crystal, and beneath the surface were hundreds of beautifully coloured fish, greedily devouring something—I suppose small insects, or fish entangled among the roots.

CHAPTER XXV.

CEYLON.

Thus was this place

*A happy rural seat of various views,
Groves whose rich trees reapt odorous gums and balm,
Others, whose fruit, burnish'd with golden rind,
Hung amiable, Hesperian fables true.*

Wednesday, March 28th.—At midnight the wind was slightly ahead, and we could distinctly smell the fragrant breezes and spicy odours of Ceylon. We made the eastern side of the island at daylight, and coasted along its palm-fringed shores all day. As the sun set, the beauty of the scene from the deck of the yacht seemed to increase. We proceeded slowly, and at about nine o'clock were in the roads of Galle and could see the ships at anchor.

Thursday, March 29th.—The pilot came off early, and soon after six we dropped anchor in Galle harbour. The entrance is fine, and the bay one of the most beautiful in the world. The picturesque town, with its old buildings, and the white surf dashing in among the splendid cocoa-trees which grow down to the water's edge, combined to make up a charming picture. We went on board the 'Poonah' to breakfast, and afterwards all over the ship, which is in splendid order. Thence we went ashore to the Oriental Company's Hotel, a most comfortable building, with a large, shady verandah, which to-day was crowded by passengers from the 'Poonah.' At three

o'clock we returned to the yacht, to show her to the captain of the 'Poonah' and some of his friends, and an hour later we started in two carriages for a drive to Wockwalla, a hill commanding a splendid view. The drive was delightful, and the vegetation more beautiful than any we have seen since leaving Tahiti, but it would have been more enjoyable if we had not been so pestered by boys selling flowers and bunches of mace in various stages of development. It certainly is very pretty when the peach-like fruit is half open, and shows the network of scarlet mace surrounding the brown nutmeg within. From Wockwalla the view is lovely, over paddy-fields, jungle, and virgin forest, up to the hills close by and to the mountains beyond. The prettiest thing in the whole scene was the river running through the middle of the landscape, and the white-winged, scarlet-bodied cranes, disporting themselves along the banks among the dark green foliage and light green shoots of the crimson-tipped cinnamon-trees. We had a glorious drive home along the sea-shore under cocoanut trees, amongst which the fireflies flitted, and through which we could see the red and purple afterglow of the sunset. Ceylon is, as everyone knows, celebrated for its real gems, and almost as much for the wonderful imitations offered for sale by the natives. Some are made in Birmingham and exported, but many are made here and in India, and are far better in appearance than ours, or even those of Paris. More than once in the course of our drive, half-naked Indians produced from their waist-cloths rubies, sapphires, and emeralds for which they asked from one to four thousand rupees, and gratefully took fourpence, after a long run with the carriage, and much vociferation and gesticulation. After dinner at the hotel we went off to the yacht in a pilot boat. By ten o'clock we were outside the harbour, and on our way to Colombo.

Friday, March 30th.—It rained heavily during the night, and we were obliged to sleep in the deck-house, instead of on deck. At daylight all was again bright and beautiful, and the cocoanut-clad coast of Ceylon looked most fascinating in the early morning light. About ten o'clock we dropped our anchor in the harbour of Colombo, which was crowded with shipping. 175,000 coolies have been landed here within the last two or three months; consequently labour is very cheap this year in the coffee plantations.

The instant we anchored we were of course surrounded by boats selling every possible commodity and curiosity, carved ebony, ivory, sandal-wood, and models of the curious boats in use here. These boats are very long and narrow, with an enormous outrigger and large sail, and when it is very rough, nearly the whole of the crew of the boat go out one by one, and sit on the outrigger to keep it in the water, from which springs the Cingalese saying, 'One man, two men, four men breeze.'

Colombo is rather a European-looking town, with fine buildings and many open green spaces, where there were actually soldiers playing cricket, with great energy, under the fierce rays of the midday sun.

Saturday, March 31st.—Up early, and after rather a scramble we went ashore at seven o'clock, just in time to start by the first train to Kandy.

The line to Kandy is always described as one of the most beautiful railways in the world, and it certainly deserves the character. The first part of the journey is across jungle and through plains; then one goes climbing up and up, looking down on all the beauties of tropical vegetation, to distant mountains shimmering in the glare and haze of the burning sun. The carriages were well ventilated and provided with double roofs, and were really tolerably cool.

About nine o'clock we reached Ambepussa, and the scenery increased in beauty from this point. A couple of hours later we reached Peradeniya, the junction for Gampola. Here most of the passengers got out, bound for Neuera-ellia, the sanatorium of Ceylon, 7,000 feet above the sea. Soon after leaving the station, we passed the Satinwood Bridge. Here we had a glimpse of the botanical garden at Kandy, and soon afterwards reached the station. We were at once rushed at by two telegraph boys, each with a telegram of hospitable invitation, whilst a third friend met us with his carriage, and asked us to go at once to his house, a few miles out of Kandy. We hesitated to avail ourselves of his kind offer, as we were such a large party; but he insisted, and at once set off to make things ready for us.

About four o'clock the carriage came round for us, and having despatched the luggage in a gharry, we drove round the lovely lake, and so out to Peradeniya, where our friend lives, close to the Botanic Gardens. Many of the huts and cottages by the roadside have 'small-pox' written upon them in large letters, in three languages, English, Sanscrit, and Cingalese, a very sensible precaution, for the natives are seldom vaccinated, and this terrible disease is a real scourge amongst them. Having reached the charming bungalow, it was a real luxury to lounge in the deep cool verandah, whilst lazily watching the setting of the sun. As soon as it dipped below the horizon, glow-worms and fireflies came out, bright and numerous as though the stars had come down to tread, or rather fly, a fairy dance among the branches of the tall palm-trees high overhead.

Sunday, April 1st.—I awoke before daylight, and watched the light gradually creeping over the trees, landscape, and garden, and the sun rising glorious from behind the distant mountains, shining brightly into the garden,

drawing out a thousand fresh fragrances from every leaf and flower.

By seven o'clock we found ourselves enjoying an early tea within the pretty bungalow in the centre of the Botanic Gardens. We went for the most delightful stroll afterwards, and saw for the first time many botanical curiosities, and several familiar old friends growing in greater luxuriance than our eyes are even yet accustomed to. The groups of palms were most beautiful. I never saw anything finer than the tallipot-palm, and the areca, with the beetle-vine climbing round it; besides splendid specimens of the kitool or jaggery-palm. Then there was the palmyra, which to the inhabitant of the North of Ceylon is what the cocoa-nut is to the inhabitant of the South—food, clothing, and lodging. The pitcher-plants and the rare scarlet amherstia looked lovely, as did also the great groups of yellow and green stemmed bamboos. There were magnolias, shaddocks, hibiscus, the almost too fragrant yellow-flowered champac, nutmeg and cinnamon trees, tea and coffee, and every other conceivable plant and tree, growing in the wildest luxuriance. Through the centre of the gardens flows the river Ambang Ganga, and the whole 140 acres are laid out so like an English park that, were it not for the unfamiliar foliage, you might fancy yourself at home.

We drove back to our host's to breakfast, and directly afterwards started in two carriages to go to church at Kandy. The church is a fine large building, lofty, and cool, and well ventilated. This being Easter Sunday the building was lavishly decorated with palms and flowers.

As soon as it became sufficiently cool we went on round the upper lake and to the hills above, whence we looked down upon Kandy, one of the most charmingly placed cities in the world. As we came back we stopped

for a few minutes at the Court, a very fair specimen of florid Hindoo architecture, where the judges sit, and justice of all kinds is administered.

Monday, April 2nd.—Before breakfast I took a stroll all round the place, with our host, to look at his numerous pets, which include spotted deer, monkeys, and all sorts of other creatures. Then we wandered down to the bamboo-fringed shores of the river, which rises in the mountains here, and flows right through the island to Trincomalee.

At eleven o'clock we left the rest of the party, and went by train to Gampola, to take the coach to Neuera-ellia, where we were to stay with an old friend. The first part of the drive was not very interesting, the road passing only through paddy fields and endless tea and coffee plantations. We reached Pusillawa about two o'clock. Thence we had a steep climb through some of the finest coffee estates in Ceylon, belonging to the Rothschilds, until we reached Rangbodde. Here there was another delay of half an hour; but although we were anxious to get on, it was impossible to regret stopping amidst this lovely scenery. The house which serves as a resting-place is a wretched affair, but the view from the verandah in front is superb. A large river falls headlong over the steep wall of rock, forming three splendid waterfalls, which, uniting and rushing under a fine one-arched bridge, complete this scene of beauty and grandeur.

We were due at Neuera-ellia at six, but we had only one pair of horses to drag our heavy load up the steep mountain road, and the poor creatures jibbed, kicked over the traces, broke them three times, and more than once were nearly going over the edge of the precipice.

After many delays we reached Head-quarter House, where the warmth of the welcome our old friend gave us soon made us forget how tired we were.

Tuesday, April 3rd.—After lunch we all started—a large party—to go to the athletic sports on the racecourse, where an impromptu sort of grand stand had been erected—literally a stand, for there were no seats. To us it appeared a warm damp day, although the weather was much cooler than any we have felt lately. This is *the* week of the year, and everybody is here from all parts of the island. People who have been long resident in the tropics seem to find it very cold; for the men wore great-coats and ulsters, and many of the ladies velvet and sables, or sealskin jackets. On the way back from the sports we drove round to see something of the settlement; it cannot be called a town, for though there are a good many people and houses, no two are within half a mile of one another. There are two packs of hounds kept here, one to hunt the big elk, the other a pack of harriers. The land-leeches, which abound in this neighbourhood, are a great plague to horses, men, and hounds. It rained last night, and I was specially cautioned not to go on the grass or to pick flowers, as these horrid creatures fix on one's ankle or arm without the slightest warning.

After dinner we went to a very pleasant ball, given by the Jinkhana Club, at the barracks. The room was prettily decorated with the racing jackets and caps of the riders in the races, and with scarlet wreaths of geranium and hibiscus mingled with lycopodium ferns and selaginella. We did not remain very late at the ball, as we had to make an early start next morning; but the drive home in the moonlight was almost as pleasant as any part of the entertainment.

Wednesday, April 4th.—We were called at four o'clock, and breakfasted at five, everybody appearing either in dressing-gowns or in habits to see us set off. It was a lovely morning, and we waited with great patience at the post-house for at least an hour and a half, and watched

the hounds come out, meet, find, and hunt a hare up and down, and across the valley, with merry ringing notes that made us long to be on horseback.

We saw all the racehorses returning from their morning gallop, and were enlightened by the syces as to their names and respective owners. There were several people, a great deal of luggage, and, though last not least, Her Majesty's mails, all waiting, like us, for the coach. About a quarter to seven a message arrived, to the effect that the horses would *not* come up the hill, they had been jibbing for more than an hour, so would we kindly go down to the coach? A swarm of coolies immediately appeared from some mysterious hiding-place, and conveyed us all, bag and baggage, down the hill, and packed us into the coach. The Pass looked lovely, and the wild flowers were splendid, especially the white datura and scarlet rhododendron trees, which were literally covered with bloom.

By daylight, the appearance of the horses was really pitiable in the extreme—worn-out, half-starved wretches, covered with wounds and sores from collars and harness, and with traces of injuries they inflict on themselves in their struggles to get free. When once we had seen their shoulders, we no longer wondered at their reluctance to start; it really made one quite sick to think even of the state they were in.

If some of the permanent officials were to devote a portion of their time to endeavours to introduce American coaches, and to improve the condition of the horses on this road, they would indeed confer a boon on their countrymen. We stopped at Rangbodde to breakfast, and again at Pusillawa. This seemed a bad arrangement, for we were already late; it resulted in the poor horses having to be unmercifully flogged in order to enable us to catch the train at Gampola, failing which, the coach proprietors would have had to pay a very heavy penalty.

From Gampola we soon arrived at Peradeniya. On my way from the station to the house of our former hosts, going over the Satinwood Bridge, from which there is a lovely view of the Peacock Mountain, I saw an Englishman whom we had observed before, washing stones in the bed of the river for gems. He has obtained some rubies and sapphires, though only of small size, and I suppose he will go on washing for ever, hoping to find something larger and more valuable. On one part of the coast of the island near Managgan the sands on the side of one of the rivers are formed of rubies, sapphires, garnets, and other precious stones washed down by the current, but they are all ground to pieces in the process, not one being left as big as a pin's head. The effect in the sunlight, when this sand is wet with the waves, is something dazzling, and proves that the accounts of my favourite Sindbad are not so fabulous as we prosaic mortals try to make out. The island must be rich in gems, for they seem to be picked up with hardly any trouble. At Neuera-ellia it is a favourite amusement for picnic parties to go out gem-hunting, and frequently they meet with very large and valuable stones by the river-side or near deserted pits, large garnets, cinnamon-stone, splendid cat's-eyes, amethysts, matura diamonds, moonstone, aquamarine, tourmaline rubies, and sapphires.

On my arrival at the house, I found that a very old friend had arrived almost directly after we left on Monday, and had departed early this morning to climb Adam's Peak, the ascent of which is a long and tedious affair, but it cannot be difficult, as thousands of aged and infirm pilgrims go every year to worship at the Buddhist or Mohammedan temples at the summit. The giant footprint has been revered alike by both religions from the earliest ages. Its existence is differently accounted for, however, by the two sects. The Buddhists say it is

the footprint of Buddha, and that an account of its origin was written 300 or 400 years B.C. The Mohammedans say that it is the first step Adam took when driven out of Paradise. They do not quarrel about it, however, but live very happily close beside one another in their respective temples on the very small summit of the mountain. The iron chains, still used by the pilgrims and visitors to assist them up the last weary flight of steps, are said to have been placed there in the time of Alexander the Great, and are mentioned by successive historians.

Just before sunset we went to have a last look at those lovely Botanical Gardens. They were more beautiful than ever in the afternoon light, and I saw many things which had escaped my notice before. I have made acquaintance with the taste of all sorts of new fruits while here, more than in our former journey; but this is to be explained by the proximity of the Botanical Gardens. I expected to revel in fruit all through the tropics, but, except at Tahiti, we have not done so at all. There is one great merit in tropical fruit, which is, that however hot the sun may be, when plucked from the tree it is always icy cold; if left for a few minutes, however, it becomes as hot as the surrounding atmosphere, and the charm is gone.

On my return, I found on my table a nasty-looking black beast about six inches long. It looked very formidable in the half-light, like a scorpion or centipede. It turned out, however, to be quite harmless, and a sort of millipede, and rather handsome, with jet-black rings, and hundreds of orange-coloured legs. There are a great many venomous snakes in Ceylon, but they always get out of the way as fast as they can, and never bite Europeans. All the roofs of the thatched bungalows swarm with rats, and in every house is kept a rat-snake, which kills and eats these rats. I more than once heard a great scuffle

going on over my bedroom, which generally ended in a little squeak, indicating that the snake had killed, and was about to eat, his prey. One of the snakes came out one day in front of my window, and hung down two or three feet from the roof. If I had not been previously assured that he was perfectly harmless, it would have been rather an alarming apparition in the dark, and, even as it was, I must confess that for a moment I did feel rather frightened as I watched him spying about, darting his forked tongue in and out, and looking quite ready for a spring at my face.

Thursday, April 5th.—Another early start by the seven o'clock train to Colombo. It was rather a hot journey down, and the train seemed full, but the scenery was lovely. As we approached Colombo the heat became greater, and in the town itself it was almost insupportable.

While we were at breakfast at the hotel in the fort, the crows were most amusing and impertinent. Every door and window was open, and they were perched on the top of the punkah, or on the iron crossbars supporting the roof, watching their opportunity to pounce down and carry off the bits left on our plates. They did not seem to mind the waiters a bit, and, with their heads cocked on one side, looked as droll and saucy as possible. People tell you all sorts of funny stories about them; but though they are very entertaining to watch, and apparently perfectly tame, it appears to be impossible to capture one alive.

By the time breakfast was over, we found that the 'Sunbeam' was already under way, and steaming about the anchorage; so it was not long before we were once more on board. Going out of harbour we passed a large steamer whose passengers and crew cheered us and waved their handkerchiefs until we were out of sight, and with that pleasant homely sound ringing in our ears we bade a

last farewell to Colombo, and started on another stage of our homeward voyage. There was no wind all the afternoon, and the sun sank into the sea, glorious and golden, as we took our last look at the lovely island of Ceylon, the land of spice and fragrance and beauty.

CHAPTER XXVI.

TO ADEN.

*Heaven speed the canvas, gallantly unfurled
To furnish and accommodate a world,
To give the Pole the produce of the sun,
And knit the unsocial climates into one.*

Friday, April 6th.—Our visit to Ceylon has been so delightful that I wish it could have been prolonged for a month, instead of lasting only a week; but in that case I should have preferred to select a cooler season of the year, when travelling is more practicable. A most interesting journey could be made through the centre of the island to see the ancient cities, temples, and tanks, over the road from Matelle to Nalandi Senadoora, to the curious rock temple at Dambool, near which is the fortified rock of Sigiri, and a few miles further are the vast ruins of Topari, or Ponamira, the mediæval capital of Ceylon. It is full of wonderful ruins, some of them among the oldest in the world. The Ranhol Dagoba, the Jayti Wana Rama, and the Galle Wihara and rock temple, carved out of the living rock, are alone worth a long journey to see. Then think of visiting Anajapoor, the city of rubies, the sacred capital of the kingdom of ruins, on whose splendours even the Chinese travellers of the early ages used to expatiate with fervour. From this point it would be easy to reach the peninsula of Jaffna,

which has been peopled with Tammils for more than two thousand years. It is the country *par excellence* of gardens exquisitely kept, and skilfully irrigated on the old Moorish system. Here are grown all the ingredients for the making of curry, which are sent to all parts of this island and to Southern India. The most important crop of all, however, is tobacco, whose excellence is famed throughout India, and of which the Rajah of Travancore holds the monopoly.

Then one might go southward from Jaffna, past Aripo, and the Gulf of Calpenty, until the curious reef of Adam's Bridge was reached, which almost connects Ceylon with India. People say it has been separated by some convulsion of nature in former days, and that the passage is gradually deepening; but recent examinations have shown that instead of being a remnant of the original rock by which Ceylon is supposed to have been once connected with the Indian continent, it is in reality a comparatively recent ridge of conglomerate and ironstone, covered with alluvial deposits carried by the current and heaped up at this particular point; whilst the gradual rising of the coast has contributed to give the reef its present altitude.

Balchus tells a most improbable story of fifteen Portuguese frigates escaping through the passage of Panupam when pursued by some Dutch cruisers in 1557. Formerly the Straits were only thirty-five yards wide, with a maximum depth of six feet of water, but lately they have been widened and deepened by ten feet, and a little Government steamer frequently passes through on a tour round the island. At present any sailing ship going from Bombay to Madras, and drawing more than ten feet of water, has to make a long curve in order to weather the Maldives and Ceylon.

In the centre of the channel there is a little island

where a Dutch establishment for horse-breeding formerly stood, the original stud having been imported from Arabia. The horses were all turned into corrals and caught by means of lassoes, and then conquered by domidores, exactly as they are at the present day in South America. Now the stud is dispersed, the buildings are in ruins, and all that remains is the Indian pagoda, where religious ceremonies, curious processions, and dances of nautch-girls occasionally take place and are attended by great crowds. To the southward again of Adam's Bridge is the celebrated Gulf of Manaar, from which the best pearls come.

The pearl fishery can be reached in about eight hours by steam from Colombo, and it would have been delightful to have visited it, had time permitted. We saw an oyster with some beautiful pearls in it, all found in the one shell. When a boat with pearls reaches the shore, the shells are divided into equal heaps, one-fourth going to the boat's crew, and three-fourths to the Government Inspector. They keep whichever heap he chooses to kick; so that, being uncertain which they will get for themselves, the boat's crew are sure to make a fair division. These heaps are then divided and sold by auction in thousands, and then subdivided again and again. Of course it is always a matter of speculation as to whether you get good pearls, bad pearls, or no pearls at all, though this last misfortune seldom happens.

The love of gambling is inherent in every Oriental mind, and the merest beggar with but a few pice in his wallet to buy his daily food will invest them in a small number of oyster shells, hoping to find a pearl of great value; and, should he fail to do so, he contents himself with eating the oyster and hoping for better luck next time. The shells are generally left on the sand in carefully guarded heaps till they die and open, when the pearls are extracted, and the fish left to decay. Some of

the oysters are taken in sealed-up sacks to Colombo, Kandy, and other inland places, in order to enable people to indulge their love of gambling and speculation, without the trouble of a journey to Manaar. Though called oysters, they are not the proper oyster, but a sort of avicula (*Meleagrina margaritifera* being the name given by Samarik), very different from the large mother-of-pearl shells in which the South Sea pearls are found.

I have not been able to keep my mind from running incessantly on Sir Emerson Tennent's delightful book on Ceylon, which describes places we have not ourselves visited, but which I wanted very much to see, and I have been so interested reading about them that I cannot help thinking other people will share my feelings. It seems wonderful that so much which is strange, beautiful, and interesting should be so easy of access from England, and yet that so few English travellers know comparatively anything of Ceylon, except Galle and Colombo, and perhaps Kandy and Trincomalee.

Saturday, April 7th.—To-day we passed close to the island of Minnikoy, between the groups of islands called the Laccadives and Maldives, some of which we saw dotting the horizon; and still further to the south stretches the Chagos Archipelago.

Sunday, April 8th.—A delightful fresh morning after a cool night. Everybody looks quite different, and we begin to hope we shall carry the north-east monsoon right across, which would be an exceptional piece of good fortune. The thermometer registers nearly the same as it did on Friday, when we were all dead with the heat. The apparently nice cool breeze that refreshes our heated bodies does not produce any corresponding effect on the glassy surface of the ocean; for we find to-day, as on previous occasions, that the temperature, both of the water and of the air, registered by the thermometer, does

not by any means correspond with the effect on the human frame.

Monday, April 9th.—No wind. We passed through a large shoal of porpoises, and at dusk we saw the light of a distant ship.

Wednesday, April 11th.—Hotter than ever. We could see a steamer in the far distance. About sunset we passed through a shoal of flying-fish; the night was intensely hot, and everybody slept on deck.

Friday, April 13th.—At 6 a.m. we made the island of Sokotra, and about seven o'clock saw 'The Brothers,' two islands where large quantities of turtle and ambergris are found. Though generally uninhabited, they are sometimes visited by the natives for the purpose of collecting articles of commerce.

Soon after sunset we saw the island of Abd-al-Kuri, with its fantastic peaks, melting into orange, gold, and purple tints, beneath the gorgeous Arabian afterglow.

Saturday, April 14th.—We made Cape Rasalhir, formerly called Guardafui, about nine o'clock yesterday evening, and passing it during the night entered the Gulf of Aden. All to-day we have been going along the Soumali coast. There is a good deal of trade carried on in native boats. Passing all these strange and comparatively unknown and little-visited islands and coasts, from which all sorts of things in daily use at home are brought, one dimly realises what commerce means and how necessary one part of the world is to the other.

Sunday, April 15th.—Still intensely hot. The usual services were held on deck at eleven and four o'clock. The land, both in Arabia and in Africa, could be seen the whole day, with precipitous mountains. In the afternoon we could make out the rock of Aden, and at sunset it stood grandly forth, looming in purple darkness against the crimson and blood-red sky, which gradually faded to

tenderest tints of yellow and green, before it finally blazed forth into a radiant afterglow. At half-past eight a gun from the fort at Aden summoned us to show our colours, or rather lights. At nine o'clock we dropped our anchor in the roads; a boat came off with a bag of newspapers and to ask for orders in the morning. It was sent by the great Parsee merchants here, who undertake to supply us with coals, provisions, water, and everything we want, and spare us all trouble. For the last three or four days we have had a nice little breeze astern, and if we had not been in a hurry to cross the Indian Ocean before the south-west monsoon set in, we should certainly have been contented with four or five knots an hour under sail instead of eight and a half under steam. We have averaged over 200 miles a day under steam alone, ever since we left Penang, and have burnt only one ton of coal for every fifty miles.

Monday, April 16th.—At 1.30 a.m. I heard the signal gun fired, and shortly afterwards a great splash of boats and oars, and a vast chattering and shouting of tongues, announced the arrival of a P. and O. steamer. She dropped her anchor just outside us, so we had the benefit of the noise all night. I got up at daylight and found the pilot just coming off. He took us to a buoy, a little closer in, and soon the business of coaling and watering commenced.

We reached the shore about 7.30 a.m., and, landing at the pier, had our first near view of the natives, who are most curious-looking creatures. They have very black complexions, and long woolly hair, setting out like a mop all round, and generally dyed bright red, or yellow by the application of lime.

We went on to the Hôtel de l'Europe, which was by no means in first-rate order, but allowances must be made for a new house. A delightful breeze was blowing in

through the open windows, and although the thermometer registered 85° in the dining-room, it did not seem at all hot. The view over the bay is very pretty, and the scene on shore thoroughly Arabian, with the donkeys and camels patiently carrying their heavy loads, guided by the true Bedaween of the desert, and the people of all tinges of complexion, from jet black to pale copper colour. A pair of tame ostriches, at least seven feet high, were strolling about the roadway, and a gazelle, some monkeys, parrots, and birds lived happily together beneath a broad verandah. After a little while we went for a drive to see the camp and town of Aden, which is four or five miles from the Point where everybody lands. On the way we met trains of heavily laden camels bringing in wood, water, grain, and fodder, for garrison consumption, and coffee and spices for exportation. After driving for about four miles we reached a gallery pierced through the rock, which admits you into the precincts of the fort. The entrance is very narrow, the sides precipitous, and the place apparently impregnable. We went all through the town, or rather towns, past the Arab village, the Sepoy barracks, and the European barracks, to the water tanks, stupendous works carved out of the solid rock, but

Soumali Indian, Aden.

until lately comparatively neglected, the residents depending entirely on distillation for their supply of water. There is a pretty little garden at the foot of the lowest tank, but the heat was intense in the bottom of the deep valley amongst the rocks, where every sun-ray seemed to be collected and reflected from the white glaring limestone, and every breath of air to be excluded. We saw a little more of the town and the market crowded with camels, the shops full of lion, leopard, and hyæna skins. We went to the officers' mess-house, visited the Protestant and Roman Catholic churches and the Mohammedan mosque, and then passing through two long tunnels, bored and blasted in the solid rock, we looked over the fortifications. Finally, we returned to the Point again by way of the Isthmus, and went to Government House, which gets a fresh breeze from every quarter. They say that to-day is hotter than usual, but it is never really very oppressive here unless there is an exceptionally hot wind blowing from the desert, but even that is partially cooled before it arrives. To us it appears delightful after our sultry voyage and the heat at Penang and Singapore.

We are all agreeably disappointed with Aden, and find that it is by no means the oven we expected; it is prettier too than I thought, the mountains and rocks are so peaked and pointed, and although the general effect is one of barrenness, still, if you look closely, every crack and crevice is full of something green. The soil, being of volcanic origin, is readily fertilised by moisture, and at once produces some kind of vegetation. This adds of course greatly to the effect of colour, which in the rocks themselves is extremely beautiful, especially at sunrise and sunset. The sea, too, is delightfully blue on one side of the peninsula, and pale green on the other, according to the wind, and the white surf curls and breaks on the sandy shore beyond the crisp waves.

We are told that thirty miles inland the country is sometimes very beautiful. There are exquisitely green valleys, with a stream running through them, amongst peaks and rocky mountains, which one rarely sees in the desert. Here the natives cultivate their crops of corn—such corn as it is too, reaching six feet above a man's head ! All sorts of useful vegetables grow abundantly, besides roses, fruits, and fragrant flowers, large supplies of which are brought daily into Aden. About ten miles from the town there are acres of the most fertile garden ground which is cultivated to supply the garrison with vegetables. Sometimes a party of seventy or eighty men, and ten or twenty Arab guides, goes out for three weeks or a month at a time surveying. The natives are much more friendly than they used to be a few years ago, when people were afraid even to ride outside the town. Now pleasant excursions lasting a few days may be made, especially as there is very fair shooting to be got. After luncheon I was shown some lovely feathers. The contrast between these and the steamer-feathers is ludicrous ; the price, too, is proportionately cheaper, for the feathers are infinitely better. Long, white, full, and curly feathers can be bought for much less than you give for them in England.

After afternoon tea we all adjourned to the 'Sunbeam,' where we found many other friends already arrived or arriving. We had only just time to look round before the sun set, and the short twilight was succeeded by the swift tropical darkness. All too soon good-bye had to be said ; the anchor was raised, and we were actually drifting slowly along under our head canvas before our friends took their departure. It was a lovely evening, with a light fair breeze, and although there appeared hardly any wind, it was wonderful how swiftly we crept out of the harbour, and, as sail after sail was spread, how rapidly we glided past the land.

CHAPTER XXVII.

TO SUEZ.

*Round the decay
Of that colossal wreck; boundless and bare
The lone and level sands stretch far away.*

Tuesday, April 17th.—The breeze still continued and freshened, and we sailed along pleasantly before it. About eleven o'clock we passed the island of Perim, a most desolate-looking place. I do not wonder that officers so much dislike being quartered there. But it is an important position, and is shortly to be strengthened, when water-tanks will be built, and attempts made to cultivate the soil. At present there does not appear to be a blade of vegetation, and on the side we passed, between the island and the coast of Arabia, nothing is to be seen but the little white lighthouse and the path leading up to it. On the southern side there is a very fair harbour and a moderate town. On the shore all round the island turtles are caught at the season when they land to deposit their eggs. To pass the island of Perim we sailed through the Straits of Bab-el-Mandeb, or 'Gate of Tears,' thus called on account of the numerous wrecks which took place there in former years. Once through the Straits we were fairly in the Red Sea. The colour of the Red Sea is certainly the bluest of ultramarines. In the afternoon the town of Mocha Yamen, celebrated alike for its breed of Arab horses and its

coffee, was visible from the masthead. It is a large white town, full of cupolas and minarets, surrounded with green as far as irrigation extends, and looking like a pearl set in emeralds on the margin of the deep blue sea against a background of red and yellow sand-mountains. Later in the afternoon we passed Great and Little Hamish, where the P. and O. boat, 'Alma,' was wrecked some fifteen years ago, and during the night sailed by Jebel Zibayar and Tukar.

Straits of Bab-el-Mandeb.

Wednesday, April 18th.—In the morning, at daylight we were off Jebel Teir, Mussawa Island, Annesley Bay lying 60 miles to the west. Our position was about 60, miles to the south-west of Mussawa Zoulia, where the expedition under Lord Napier of Magdala landed in 1867. At noon we had sailed 221 miles, a most unexpected run in the Red Sea. In the afternoon it fell calm, but the wind freshened again, and we went on sailing until after midnight.

Thursday, April 19th.—We commenced steaming at 1 a.m., stopped, however, at 5 a.m., and sailed all day. Yesterday we were surrounded by some beautiful blue

birds, who hovered about us and settled at intervals on the masts and yards. During the night two were caught napping by the men, and in the course of to-day two more, hotly pursued by a hawk, took refuge on board, and were also captured. One was given to me. It appears to be a very beautiful kind of jay, with feathers of the most brilliant shades of blue.

We passed Souakim to-day, the port of Nubia. It is about 275 miles, or 25 days' camel-journey, from thence to Berber on the Nile. The road passes through Korib, and among fine red granite and black basalt mountains, 4,000 feet high.

Friday, April 20th.—A little hotter still; there is no wind at all, and we are obliged to steam. In the morning we passed to the southward of Jeddo, the port of Mecca. Unfortunately it was so hazy that we could not distinguish anything whatever of the town or country, only a line of mountains rearing their heads above the clouds. We had hoped to be at Suez early on Sunday, but now I fear we shall not arrive until Monday.

Saturday, April 21st.—Hotter and still hotter every day, says the thermometer, and so we say also. Everybody told us these would be our two hottest days, and certainly the prediction has been verified. We did not see a single ship all day, but in the afternoon passed Zambo, the port of Medina. A little before midnight we made the light on the *Dædalus* shoal on the starboard bow.

Sunday, April 22nd.—Clouds veiled the sunrise this morning, which was a welcome relief; still it was too hot for service in the saloon, and it was therefore held on deck. A light breeze sprang up ahead during its performance, which cooled and refreshed us immensely. About twelve o'clock we passed another pair of 'Brothers,' a couple of odd-looking rocks or islands, like tables, rising straight out of the sea; there is a beacon on the northernmost one.

While we were at lunch, the breeze freshened so much that we were all glad to add some wraps to our light and airy costumes. A little later, a summer gale was blowing ahead. The spray came over the decks, and there was a strong wind dead ahead. We all felt cold, though the thermometer still registered 75°.

Monday, April 23rd.—The gale blew as hard as ever, and quite as dead ahead. About noon we made the island of Shaduan, or isle of Seals, so named by the ancients, when the sea and gulf abounded with seals. There are still a few occasionally to be seen to the northward by the fishermen, and their skins are brought to Suez for sale. We are making tacks backwards and forwards across the narrow sea, an exciting amusement for a yachtsman, as it requires constant attention. The sailing directions say that this sea is ill surveyed, except in the direct channel. There are many coral reefs and sunken rocks, and, on whichever side you may happen to be wrecked, the natives are ready to rob, ill-treat, and kill you, or sell you as slaves in the interior. It was on two projecting coral reefs from the island of Shaduan, that the 'Carnatic' was wrecked in 1869. She ran ashore at four o'clock in the morning of the 13th of September, soon after having made the light on Rhas Garril. We were at Suez in October of the same year, and everybody was then full of the sad particulars of the wreck, the soldiers being especially useful in bringing in the passengers' luggage which had been recovered from the Arabs.

Tuesday, April 24th.—We are still beating to windward against a head gale, and by noon had made sixty-five miles to the good, right in the wind's eye—not a bad performance, considering that the gale was blowing with a force of nine or ten. It has the merit of novelty, too, for I suppose that for years no sailing ships have been seen in the Gulf of Suez. The winds blow so steadily for

months together, that for six months in the year you cannot get into the Red Sea, and for the other six months you cannot get out of it.

We passed the island of Rhas Garril, and soon afterwards a steamer went by, altering her course a good deal to inspect us. She evidently thought we were a broken-down steamer, and intended to come to our rescue. If this gale continues, it will be Thursday or Friday before we reach

Beating up the Red Sea.

Suez ; but it may possibly change to-night, and it looks now as if it were breaking.

Wednesday, April 25th.—At last the gale *has* broken. There was not much wind when I went on deck at 4 a.m., and by seven o'clock it was so nearly calm, that the funnel could be raised and fires lighted, and we were soon steaming straight for our destination. We could not see Mount Sinai on account of the mist, but made out the place where the Israelites are said to have crossed the Red Sea, and by four o'clock the town of Suez lay right ahead. The shores are very barren, not a blade of grass nor a scrap

of vegetation being visible. Nothing is to be seen save mountain peaks, rocks, stones, and sand. But even this barren scene has a special beauty of its own, particularly at sunrise and sunset. The shapes of mountain and rock are alike striking, the sharp shadows are lovely, and the contrast of reds, yellows, and browns, with the bright blue sea and crisp white waves, is very beautiful. Even when the sun has set, and the rich tints have faded away, the full moon adds another charm to the landscape.

This afternoon, as we were steaming up towards Suez, I had a chat with Mahomet, one of our Indian firemen, who was fringing a piece of muslin for a turban. I asked him if it was English. 'No, Missy; no English—Switzerland; English no good; all gum and sticky stuff; make fingers dirty; all wash out; leave nothing.' In the South Sea and Sandwich Islands, and in the Malay Peninsula, the natives make the same complaints as to the Manchester cottons. At Hongkong some of the large shops had fifty expensive English ships' compasses on hand; they were all quite unsaleable owing to the liquid having gone bad, in consequence of its not having been properly prepared. Some American compasses of the same quality were in good order and not in the least affected by the climate. It will be a bad day when the confidence in England's honesty, as a nation, throughout the world, and consequently her well-earned supremacy in commerce, have passed away. The burden, unfortunately, will not fall on the heads of the offenders alone; but, as usual, the innocent will suffer with and for the guilty.

After four o'clock we came near two steamers lying at anchor, and were shortly afterwards boarded by the captain of the port, the health officer, and sundry other functionaries. After a short delay we dropped anchor, and just as the sun was setting in 'purple and gold' behind the mountains of Africa, we went ashore in

the steam launch. We landed at the Canal Company's Office, in front of which there is a bust of Lieutenant Waghorn, to whom we are indebted for the overland route.

Thursday, April 26th.—Such a sunrise as this morning's you could only see in Arabia or Egypt. There is a peculiarity about desert colouring at sunrise and sunset that can never be seen anywhere else. We had sundry visitors during the early morning, and before ten o'clock we were in the Canal and steaming on at regulation speed. As the sun rose the heat became intense, 96° in the shade under double awnings. So far from there being a cool breeze to temper it, a hot wind blew from the desert, like the blast from a furnace. I stood on the bridge as long as I could bear the heat, to look at the strange desert view. Sand, sand everywhere; here a train of camels, there a few Arab tents, now a whole party shifting their place of abode; a group of women washing, or a drove of buffaloes in a small tributary stream.

We passed Chaloux and reached Ismailia just at nine o'clock, not without considerable effort on the part of the pilot. A steam launch came off from the shore, and we landed at once. Some of us start to-morrow, overland *via* Cairo, to join the yacht at Alexandria, in order to see the Pyramids. It was a glorious night as we rowed off to the yacht under the bright beams of the full moon, and the air, too, was quite fresh and cool—a most refreshing change from the noontide heat.

The traffic on the Canal has increased during the last few years, and especially during the last few months; on an average four or five ships passed through every day. To-day they took 6,000*l.* at the Suez Office alone. They have an excellent plan of the Canal there, and little models of ships, which are arranged according to the telegrams

constantly received, so that the chief officers at each end of the Canal know exactly where every ship is. Instant information is of course sent of any stoppage or any accident, but these occur comparatively seldom. Some time ago M. Lesseps bought a small canal partially stopped up leading from the Nile at Cairo to Ismailia. It has been widened and deepened, and was opened a few weeks ago with great ceremony and grand doings. Now any vessel not drawing more than fourteen feet can go direct from Suez or Port Saïd to Cairo. If we had had time, we might have done it in the yacht, and lain at anchor almost under the shadow of the Pyramid of Cheops. The special object of the new canal is to make Cairo and Ismailia Egyptian ports as well as Alexandria, thereby saving much land carriage and labour of shifting. Already several ships laden with grain, from Upper Egypt, have availed themselves of this new means of communication.

Friday, April 27th.—Another glorious sunrise. The pilot was on board at 5 a.m., and the Dhebash with fish, strawberries, and fresh vegetables. This is a beautiful climate, though there is scarcely any rain; only one very slight shower has occurred during the last three years at Suez, but the soil of the desert after the Nile overflow brings forth tenfold.

The 'Sunbeam' was to start at eight o'clock, as soon a large vessel had passed up from Port Saïd. There are only certain places, called *gares*, in the Canal where vessels can pass one another, so one ship is always obliged to wait for another. We landed at half-past seven and left by the eleven o'clock train for Cairo. The change in the face of the country since we were here eight years ago is something extraordinary. A vast desert of sand has been transformed into one large oasis of undulating fields of waving corn, where there used to be

nothing but whirlwinds of sand. All this has been effected by irrigation. The wealth of Egypt ought greatly to increase. How the people managed to live before is a mystery. Now every field is full of labourers reaping and stacking the corn, women gleaning, and in some places the patient, ugly black buffaloes ploughing the stubble for fresh crops.

At half-past six we reached Cairo, and were conveyed in a large *char-à-bancs* to what was formerly Shepherd's Hotel, now partly rebuilt and much altered for the better. Even in that short drive we could see that the face of the capital of Egypt had altered as much as the country, though I am not sure that it is so greatly improved. The Ezkebieh gardens are beautifully laid out for evening promenade; but although the flowers are lovely, and the turf, thanks to constant waterings, is deliciously green, all the large trees have been cut down. There is no seclusion, no shade, which seems a pity in a country where the greatest desire of life is shelter from the noonday heat.

Saturday, April 28th.—We had settled to start at six o'clock this morning to visit the Pyramids. The morning was cold and grey, a strong northerly wind was blowing, and the change from the weather which had prevailed but a few hours previously was altogether most striking and unexpected. We drove rapidly through the streets and the outskirts of the town, where old houses are being pulled down and new ones rapidly built up, and where a general air of new bricks and old rubbish pervades the scene. Then we crossed the Nile by a handsome iron bridge, and saw the Palace of Gezireh. We passed the railway extension works, and, to the great delight of the children, saw two elephants busily employed, one of which was being made to lie down to enable his mahout to dismount. Soon the little ones gave a shout of 'The Pyramids!' and there before us stood those grand monuments

of a nameless founder, which for centuries have stood out in the sands of the desert, while the burning African sun and the glorious African moon have risen and set on their heavenward-pointing summits for countless days and nights. Even the earth has changed her position so much since they were erected that the pole star no longer sheds its light in a direct line through the central passages, as it did when first they were designed.

We drove along under avenues of now leafless trees to the foot of the hill on which the Pyramids are situated. On arriving we were at once surrounded by a crowd of Arabs. They are certainly a fine-looking lot of men, rather clamorous for backshish, and anxious to sell their curiosities, real or imitation. Many could speak several languages quite fluently, while many had a fair knowledge of the geography of Europe.

Returning to Cairo, we went across squares and gardens and through wide streets, for, alas ! Cairo is being rapidly Haussmannised. For the capitalist or resident, Cairo may be improved ; but for the traveller, the artist, the lover of the picturesque, the quaint, and the beautiful, the place is ruined. Cairo as a beautiful and ancient oriental city has ceased to exist, and is being rapidly transformed into a bad imitation of modern Paris, only with bluer skies, a more brilliant sun, and a more serene climate than it is possible to find in Europe. Only a few narrow streets and old houses are still left, with carved wooden lattices, where you can yet dream that the ' Arabian Nights ' are true.

We went to the gold and silver bazaar, and bought some quaint silver jewellery from Assouan, Soudan, and Abyssinia ; then through the Turkish bazaar, the saddlery bazaars, past mosques and old houses, till at length we emerged into new squares and new streets, before climbing the hill to the citadel, the Viceroy's palace, and the splendid

Mosque of Mehemet Ali, built of Egyptian alabaster. The view from the terrace is superb, over city, desert, river, palm-trees, and Pyramids. The sunset this evening was a disappointment; yellow, cold, and watery, a strong north wind bringing up all the sand from the desert.

Sunday, April 29th.—In the cool of the afternoon we drove through Roulai, where the museum stands, in a beautiful garden close by the riverside, amid flowers in full bloom.

Our journey to Alexandria in the evening was cool and pleasant.

Monday, April 30th.—We called on the Consul, the Vice-Consul, and our old friend, Consul Burton of Trieste, Haj Abdullah. He has just returned from a journey through the ancient land of Midian, undertaken at the special request of the Viceroy. He describes the expedition as having been most successful; the climate is almost perfect from September to May; the land is well watered by little streams flowing through fertile valleys, and full of fragrant flowers and luscious fruits. The corn reaches above the camel-men's heads, which means a height of fourteen or fifteen feet. But the mineral wealth of the country is its most extraordinary feature. He found traces of gold in the sand of the river-beds, in spots pointed out to him by his fellow-pilgrims on the way to Mecca twenty years ago, to say nothing of tin, iron, &c. Perhaps the most interesting part of his discovery was the remains of eight ruined cities with traces in the dry river-beds of stone-crushing and gold-seeking apparatus, which must have been used centuries ago.

The Consul kindly sent a janissary with us to show us the Sultan's palace. Thence we went to see Pompey's Pillar and Cleopatra's Needle, the dahabeas ready to go up the Nile, &c.; and returned to the hotel in time for dinner and a chat afterwards in the cool courtyard.

Tuesday, May 1st.—I wrote from 3 a.m. to 6.30 a.m. in order to send letters off by the French mail, and at seven Mabelle and I sallied forth on donkeys to visit the market. There was not much to see, however, everything being so crowded and jammed up, meat, fish, vegetables, and fruit, all close together. The crowd was amusing, as all the European householders had negroes or Arabs following them, laden with their purchases. We found some lovely flowers in a street near the market, and then we went on to the big gold and silver bazaar, and to the Turkish and Syrian bazaars, where we saw all the specialities of Constantinople and Broussa, Damascus and Jerusalem, laid out before us.

CHAPTER XXVIII.

'HOME.'

*She comes, majestic with her swelling sails,
The gallant bark along her watery way;
Homeward she drives before the favouring gales.
Now flitting at their length the streamers fly,
And now they ripple with the ruffling breeze.*

Wednesday, May 2nd.—Steam was up at five o'clock, the wind being still fair but light. Soon it dropped to a calm, and then went round and blew with great force exactly in the opposite direction, dead ahead. The fires had to be put out, for it was so rough we could do no good steaming against the gale. The screw kept racing round and shaking the vessel terribly.

Thursday, May 3rd.—The wind kept on increasing, and at last blew quite a gale. We have gone a long way out of our course to the northward, ready for a favourable change, but we can scarcely make any way to the westward.

Friday, May 4th.—A repetition of yesterday—

Beating, beating all the day,
But never a bit ahead.

Saturday, May 5th.—A lull at last, and we are able to have the fires lighted and to steam on our course. We made the Island of Scarpanto in the morning. All the afternoon and evening we have been steaming along ten

miles to the southward of Crete. Its outline was very beautiful, surmounted by the snow-capped mountains. I was up on deck just in time to behold the most lovely sunset, with exquisite rosy, purple, and crimson tints on sea and sky.

We stopped steaming late in the day, but fires were lighted again in the middle of the night, as the wind was still ahead. There was a discussion whether or not to go round the north side of the Island of Kandia, so as to have a glimpse of the British Fleet at anchor in Suda Bay, if they have already arrived there.

Sunday, May 6th, and Monday, May 7th.—Early in the morning the snowy mountains of Crete were still in sight.

Tuesday, May 8th.—A fine morning, with a cold strong head breeze. At noon we rejoiced to think that Malta was not more than a few miles ahead, or we should assuredly have failed to reach our port before nightfall. About three we closed in with the land about Marsa Scirocco and Delamara Point, and, after one or two tacks, rounded the Point of Ricasole, and leaving Port St. Elmo on our right, we swiftly glided into the grand harbour of Valetta. We have been here so often that it feels quite like reaching home.

Wednesday, May 9th.—I was up soon after sunrise, and admired this often-abused creek as much as I always do. The stone houses, the carved and coloured verandahs of bright flowers, the water lapping the very door-steps, the gaily painted boats with their high prows at either end, the women in their black dresses and faldettas, and black-robed priests, all helped to carry the imagination over the Mediterranean and up the Adriatic to lovely Venice. At this hour in the morning there were not many English soldiers or sailors to spoil the illusion.

Malta is essentially a border-land—African by geo-

graphical configuration, European politically, and assuredly Asiatic in its language, its buildings, and in the manners and customs of the natives. We gave everybody on board a holiday, and the chance of a run ashore to-day to stretch their legs after their long sea voyage. Tom went on board the 'Sultan' to see the Duke of Edinburgh and his splendid ship. Whilst at breakfast I received an intimation that the Duke of Edinburgh wished to come and examine the yacht. His Royal Highness arrived soon afterwards, quite unattended, in a beautiful ten-oared barge, and paid us a long visit, inspecting the yacht minutely and looking at all the pets. He took a great interest in our voyage and courses, as well as in the numerous curiosities, knowing at once from what place each had been procured. The Duke, who had taken very nearly the same cruise himself in the 'Galatea' a few years ago, inquired very kindly after all his old friends at Tahiti, Hilo, Honolulu, and many other places.

After the Duke's departure we went ashore again, and went over the palace and through the armoury. Then we took a walk down the Strada Reale, the shopping street of Valetta. The shops are full of coral, lace, gold and silver filigree work, and a new sort of lace they make in Gozo of white silk, in beautiful patterns. It has been manufactured only during the last few years, and varies much in quality and design.

Thursday, May 10th.—At nine o'clock we were fairly off. Malta is certainly the most delightful place for yachting winter quarters, with its fine healthy harbour, charming society, very cheap living, and abundance of everything good. It is in proximity to many pleasant places, and most interesting excursions can easily be made to Sicily and Italy, or the coast of Africa. To-day we glided along the coast, past the strongly fortified little island of Consino, standing boldly out in mid-channel

between Malta and Gozo. The Mediterranean appears to us a highway after the lonely oceans and seas we have been sailing over. Within one hour this morning, we saw more ships than in the whole of our passage from Valparaiso to Tahiti and Yokohama. Towards the evening, we could see the island of Pantellaria in the distance.

Friday, May 11th.—At 2.30 a.m. Pantellaria was a beam. At eight we passed Cape Bon and sailed across the mouth of the Bay of Tunis, in the centre of which is Goletta, the port of Tunis, the site of the ancient city of Carthage. Once we anchored close by that place for two or three days, and on that occasion I collected enough varieties of marble and mosaic from the old palaces to make some beautiful tables when we got home. In the afternoon and evening we made the Fratelli and the Sorelle Rocks, and still later the little Island of Galita. There were many steamers going in all directions, and it struck one very forcibly how much this little islet in mid-channel stands in need of a light.

Sunday, May 13th.—The wind was dead ahead, and the sea of that remarkably confused character for which the Mediterranean is famous. It seemed as if the wind of yesterday, the wind of to-morrow, and the wind of to-day, had all met and were bent on making a night of it. We had service at eleven and four. The chart, now a good old friend, for it has been used by us on so many Mediterranean voyages, showed that this is the fourth noontide we have spent within a radius of thirty miles of this particular spot; within a radius of sixty miles we have spent at least three weeks of our lives at various periods. This does not of course include voyages in steamers which are not recorded in the chart.

Monday, May 14th.—About breakfast time to-day we crossed the meridian of Greenwich; and this virtually completed our voyage round the world, our original point

of departure having really been Rochester, which is a few minutes to the east of Greenwich. The wind changed in the middle of the day, and we passed through a large fleet of merchantmen hove-to under shelter of Cape de Gat, where they had collected, I suppose, from various ports in Spain and Italy.

Tuesday, May 15th.—This was a somewhat sad day, many of our pets dying from the effects of the cold wind or from accidents.

This evening 'Beau Brummel,' the little pig I brought from Bow Island, in the South Pacific, died of a broken spine. A spar must have dropped upon poor piggy accidentally whilst he was running about on deck, though of course no one knew anything about it. I am very sorry; for though I must confess he was somewhat greedy and pig-like in his habits, he was extremely amusing in his ways. Besides, I do not think any one else in England could have boasted of a pig given to them by a South-Sea-Island chief. Probably 'Beau Brummel' was a lineal descendant of the pigs Captain Cook took out in the 'Endeavour.'

Tuesday, May 15th.—Cape de Gat was abeam early this morning. The wind fell light, but Tom hoped it would freshen again; otherwise, with steam, we might easily have got into Gibraltar to-night. As it was, fires were not lighted until ten o'clock.

Wednesday, May 16th.—At 3 a.m. I was called to see the light on Europa Point, and stayed on deck to watch the day dawn and the rising of the sun. It was not, however, a very agreeable morning; the Levanter was blowing, the signal station was enveloped in mist, the tops of the mountains of Africa were scarcely discernible above the clouds, and Ceuta and Ape's Hill were invisible. Algeciras and San Roque gleamed white on the opposite shore of the bay, while the dear old Rock itself looked

fresher and cleaner than usual, exhaling a most delicious perfume of flowers. As the sun rose, the twitterings of the birds in the Alameda sounded most homelike and delightful.

We had dropped our anchor inside the New Mole about 4.30, and before six the familiar sounds of English martial music could be heard from all the different barracks, as the regiments came marching down the hill and along the Alameda to the north front with all their baggage, military trains, tents, and ambulances, for a day's camping out. We were anxious to get on shore to see about coals, water, and provisions, but no health-boat came near us. About seven o'clock we started in despair, first to hail a policeman on shore (at a most respectful distance), to inquire where we could get *pratique*; then we procured it, and sent word back to the 'Sunbeam' that she was out of quarantine, and might haul down the yellow flag. We landed, went to the market, and bought some lovely carnations stuck in a prickly-pear leaf to keep them fresh. After breakfast we went to pay some visits. We thought we ought to go and look at the galleries and Signal Station, as one or two of our party had never been here before; so we started, some on foot and some on donkeys. All the way up the steep streets to the Moorish castle, girls met us, selling lovely scarlet carnations and yellow roses. The galleries have not changed in the least since our last visit, but our soldier-guide told us they were daily expecting some big guns to come out, and he gave us a minute explanation how they were to be mounted. It was a pleasant ride, neither too hot nor too cold. Every crevice and interstice between the rocks was full of wild flowers, looking bright and pretty, though somewhat insignificant after the gorgeous tropical blossoms our eyes have been lately accustomed to. The fog had cleared off, and the view was beautiful; ships lay in the bay below

us from all parts, including a Portuguese gunboat. We saw also one of the two old eagles sitting near her nest in the accustomed place; this year she has only one young one. We did not see the monkeys, on account of the Levanter, but their number has increased to twenty-four, so that there is no immediate fear of their becoming extinct.

Tangier.

A. Y. B.

At half-past six p.m. we weighed anchor and steamed out of the anchorage inside the New Mole. In the straits the wind was fair, so the funnel was soon lowered, and the screw feathered, and we were racing along under sail alone. Off Tarifa we found quite a gale blowing, and the wind continued fresh and fair throughout the night.

Thursday, May 17th.—The strong fair wind dropped, and then came dead ahead, and off Cadiz we had to get up steam.

Off Cape St. Vincent it blew so hard that we were afraid we should be obliged to bring up in the bay of

Sagres ; but we found that it was only a land breeze, and that it was much smoother outside than we had expected.

Friday, May 18th.—Fresh breeze. We met many steamers going down the coast with all sail set. After passing Cape Espichel the wind increased to a northerly gale, against which it was impossible to proceed. We therefore put into Lisbon. The mountains at the mouth of the Tagus, the tower and church of Belem, and the noble river itself looked even more beautiful in the sunset than my recollection led me to expect. We landed and went for a walk. One of the things we saw during our stroll was the fine statue of Luiz de Camoens, specially interesting to us, as we had so recently seen the place where he passed many of the weary years of his exile. Rolling Motion Square was as giddy as ever. It was a curious fancy to pave it in such a way as to make it look like the waves of the sea, perpetually moving ; and it must be a severe trial to the peripatetic powers of those who have not quite recovered their sea legs.

Saturday, May 19th.—We were off early ; it was a lovely day, and we had a pleasant drive to Cintra. On our arrival we mounted donkeys and went to Peña, the beautiful palace of the ex-King Ferdinand, situated at the top of the mountains. It is an extraordinary-looking place, the different parts being built in every imaginable style of architecture, with exquisite carving and old tiles, that would delight the heart of a connoisseur. One of the most prominent objects near the Palace of Peña is the statue of Vasco da Gama, nobly placed on a pedestal of natural rocks, piled on the summit of a mountain peak, and worthy of the adventurous traveller it is erected to commemorate. The gardens are full of camellias, roses, bougainvillea, &c. We lunched at the excellent hotel, and came to the conclusion that Cintra is the place, not only 'to spend a happy day,' but many happy months.

We had a hot drive back to Lisbon, and then went by tram to Belem, where we spent some time in the church and in wandering through its exquisite cloisters. The first stone was laid in 1500, and the name changed from Bairro de Restello to Belem or Bethlehem by Prince Henry of Portugal, the great promoter of maritime discovery in that century. It was built specially to commemorate the successful voyage of Vasco da Gama, who returned from the discovery of India in 1499.

Tom met us with the yacht, and we went on board with the intention of proceeding straight to sea. But after passing through the Canal del Norte a heavy gale obliged us to anchor in Cascaes Bay for the night.

Sunday, May 20th.—Weighed at 5 a.m. There was a dense fog off Cape del Roca, and the steam-whistle, fog-horns, and bell were constantly kept going, with lugubrious effect. We had service at eleven and 4.30. Passed the Burlings at 1.30. Heavy swell all day.

Monday, May 21st.—Rough and disagreeable. Off Viana at noon. Passed Oporto and Vigo in the course of the afternoon.

Tuesday, May 22nd.—If yesterday was bad, to-day was worse. We hove-to for some time under the shelter of Cape Finisterre, then went on again for a short distance; but at 1.30 a.m. on the 23rd we were obliged to put round and wait for daylight.

Wednesday, 23rd, and Thursday, 24th.—In the course of the day the weather mended, though the sea still continued rough, and our course was really in the direction of America rather than England. In the evening of the 24th we were able to light fires, and, with the assistance of steam, to keep nearly on our proper course.

Saturday, May 26th.—Saw the first English land, the Start, at 2.30 a.m. Wind continued fresh and fair, but at noon dropped calm, and we had to steam through the

Needles instead of sailing, as we had done on our way out. We reached Cowes about 3 p.m., and were immediately welcomed by several yachts, who dipped their ensigns and fired their guns. We landed, and were warmly greeted by many friends, and, after sending off telegrams and letters, re-embarked and proceeded towards Hastings. We were anxious to land by daylight, but this was not to be. So it turned out to be midnight before we reached Beachy Head, and could discern the lights of Hastings shining in

Our Welcome Back off Hastings. A.Y.B.

the distance. As we drew near to our anchorage we could see two boats coming swiftly towards us from the shore. The crews were members of the Royal Naval Artillery Volunteers, and as they came alongside they raised a shout of welcome. Hastings had been expecting us all the afternoon, and late as was the hour, 1.30 a.m., we were immediately surrounded by a fleet of boats, and many willing hands seized our heterogeneous cargo and multitudinous packages, and before daylight all had been safely landed on the pier.

How can I describe the warm greetings that met us everywhere, or the crowd that surrounded us, not only

when we landed, but as we came out of church; how, along the whole ten miles from Hastings to Battle, people were standing by the roadside and at their cottage doors to welcome us; how the Battle bell-ringers never stopped ringing except during service time; or how the warmest of welcomes ended our delightful year of travel and made us feel we were home at last, with thankful hearts for the providential care which had watched over us whithersoever we roamed?

SELECT GENERAL LISTS OF SCHOOL-BOOKS

PUBLISHED BY
MESSES. LONGMANS AND CO.

The School-Books, Atlases, Maps, &c. comprised in this Catalogue may be inspected in the Educational Department of Messrs. LONGMANS and Co. 89 Paternoster Row, E.C. London, where also all other works published by them may be seen.

Caldar's Familiar Arithmetic, 12mo. 4s. 6d. or with Answers, 5s. 6d. the	
Answers separately, 1s. the Questions in Part II. separately.	1s.
Caldar's Smaller Arithmetic for Schools, 18mo.	2s. 6d.
Colenso's Arithmetic designed for the use of Schools, 12mo.	4s. 6d.
Key to Colenso's Arithmetic for Schools, by Rev. J. Hunter, M.A. 12mo.	5s.
Colenso's Shilling Elementary Arithmetic, 18mo. 1s. with Answers	1s. 6d.
— Arithmetic for National, Adult, and Commercial Schools:—	
1. Text-Book, 18mo.	6d.
2. Examples, Part I. Simple Arithmetic	4d.
3. Examples, Part II. Compound Arithmetic	4d.
4. Examples, Part III. Fractions, Decimals	
Duodecimials	4d.
5. Answers to Examples, with Solutions of the difficult Questions ...	1s.
Colenso's Arithmetical Tables, on a Card	1d.
Combes and Hines' Standard Arithmetical Copy-Books, Nine Books, 4d. each.	
Combes and Hines' Complete Arithmetical Copy-Books; in Nine Books, on	
Fine Paper, 4d. to 6d. each. Price 4s. 6d. per dozen to Teachers.	
Harris's Graduated Exercises in Arithmetic and Mensuration, crown 8vo.	
2s. 6d. or with Answers, 3s. the Answers separately, 9d.	Full Key 6s.
Hiley's Recapitulatory Examples in Arithmetic, 12mo.	1s. 6d.

London, LONGMANS & CO.

Hunter's Modern Arithmetic for School Work or Private Study, 12mo. 3s. 6d. Key, 5s.	
— New Shilling Arithmetic, 18mo.	1s. Key 2s.
— Standard Arithmetic, Three Parts, 2d. each, and Key	6d.
Isbister's High School Arithmetic, 12mo. 1s. or with Answers	1s. 6d.
Johnston's Civil Service Arithmetic, 12mo.	3s. 6d. Key 4s.
— Civil Service Tota, with Answers and Cross-Tots	1s.
Liddell's Arithmetic, 18mo. 1s.—or Two Parts	each 6d.
Lupton's Arithmetic for Schools and Candidates for Examination, 12mo.	
3s. 6d. or with Answers, 3s. 6d. the Answers separately 1s.	Key 6s.
— Examination-Papers in Arithmetic, crown 8vo.	1s.
M'Leod's Manual of Arithmetic, containing 1,750 Questions, 18mo.	9d.
— Mental Arithmetic, I. Whole Numbers, II. Fractions	each 1s.
— Extended Multiplication and Pence Tables, 18mo.	2d.
Merrifield's Technical Arithmetic and Mensuration, small 8vo. 3s. 6d. Key 3s. 6d.	
Moffatt's Mental Arithmetic, 12mo. 1s. or with Key, 1s. 6d.	
Tate's First Principles of Arithmetic, 12mo.	1s. 6d.

Book-keeping and Banking.

Hunter's Exercises in Book-keeping by Double Entry, 12mo.	1s. 6d. Key 3s. 6d.
— Examination-Questions in Book-keeping by Double Entry, 12mo.	2s. 6d.
— Examination-Questions &c. as above, separate from the Answers 1s.	
— Ruled Paper for Forms of Account Books, 5 sorts ... per quire, 1s. 6d.	
— Self-Instruction in Book-keeping, 12mo.	2s.
— Studies in Double Entry, crown 8vo.	3s.
Isbister's Book-keeping by Single and Double Entry, 18mo.	9d.
— Set of Eight Account Books to the above	each 6d.
Macleod's Economics for Beginners, small crown 8vo.	2s. 6d.
— Elements of Banking, Fourth Edition, crown 8vo.	5s.

Mensuration.

Boucher's Mensuration, Plane and Solid, 12mo.	3s.
Hiley's Explanatory Mensuration, 12mo.	2s. 6d.
Hunter's Elements of Mensuration, 18mo.	1s. Key 9d.
Merrifield's Technical Arithmetic & Mensuration, small 8vo.	3s. 6d.
Nesbit's Treatise on Practical Mensuration, by Hunter, 12mo. 3s. 6d. Key 5s.	

Algebra.

Colenso's Algebra, for National and Adult Schools, 18mo.	1s. 6d. Key 2s. 6d.
— Algebra, for the use of Schools, Part I. 12mo.	4s. 6d. Key 5s.
— Elements of Algebra, for the use of Schools, Part II. 12mo. 6s.	Key 5s.
— Examples and Equation Papers, with the Answers, 12mo.	2s. 6d.
— Student's Algebra, crown 8vo.	6s. Key 6s.
Griffin's Algebra and Trigonometry, small 8vo.	3s. 6d.
— Notes on Algebra and Trigonometry, small 8vo.	3s. 6d.
Lund's Short and Easy Course of Algebra, crown 8vo.	3s. 6d. Key 2s. 6d.
Lupton's Algebra for Army, &c. Examinations, 18mo.	2s. 6d.
Reynolds's Elementary Algebra for Beginners, 18mo. 9d. Answers, 3d. Key 1s.	
Tate's Algebra made Easy, 12mo.	2s. Key 3s. 6d.
Wood's Algebra, modernised by Lund, crown 8vo.	7s. 6d.
— Companion to, by Lund, crown 8vo.	7s. 6d.

Geometry and Trigonometry.

Booth's New Geometrical Methods, 2 vols. 8vo.	36s.
Colenso's Elements of Euclid, 18mo. 4s. 6d. or with Key to the Exercises ...	6s. 6d.
— Geometrical Exercises and Key	3s. 6d.
— Geometrical Exercises, separately, 18mo.	1s.
— Trigonometry, 12mo. Part I. 3s. 6d. Key 3s. 6d. Part II. 2s. 6d. Key 5s.	
Griffin's Parabola, Ellipse, and Hyperbola, post 8vo.	6s.
Harvey's Euclid for Beginners, Books 1. & II., 12mo.	2s. 6d.

London, LONGMANS & CO.

Hawtrey's Introduction to Euclid	fcp. 8vo.	2s. 6d.
Hunter's Plane Trigonometry, for Beginners, 18mo.....	1s.	Key 9d.
— Treatise on Logarithms, 18mo.....	1s.	Key 9d.
Isbister's School Euclid, 12mo. Book I. price 1s. Books I. & II. price 1s. 6d. Books I. to IV. price 2s. 6d.		
Jean's Plane and Spherical Trigonometry, 12mo. Part I. 5s., Part II. 4s. or the 2 Parts in 1 vol. price 8s. 6d.		
Potta's Euclid, University Edition, 8vo.....		10s.
— — Intermediate Edition, Books I. to IV. 3s. Books I. to III. 2s. 6d. Books I. II. 1s. 6d. Book I. 1s.		
— Enunciations of Euclid, 12mo.....		6d.
Salmon on Conic Sections, 6th Edition, 8vo.		12s.
Tate's Differential and Integral Calculus, 18mo.....		4s. 6d.
— First Three Books of Euclid, 18mo.		9d.
— Practical Geometry, with 261 Woodcuts, 18mo.....		1s.
— Geometry, Mensuration, Trigonometry, &c. 12mo.....		3s. 6d.
Thomson's Euclid, Books I. to VI. and XI. & XII. 12mo.....		5s.
— Plane and Spherical Trigonometry, 8vo.		4s. 6d.
— Differential and Integral Calculus, 12mo.		5s. 6d.
Watson's Plane and Solid Geometry, small 8vo.....		3s. 6d.
Williamson on Differential Calculus, crown 8vo.		10s. 6d.
— on Integral Calculus, crown 8vo.		10s. 6d.
Willcock's Elementary Geometry of the Right Line, crown 8vo.....		5s.
Wright's Elements of Plane Geometry, crown 8vo.....		5s.

Land Surveying, Drawing, and Practical Mathematics.

Binns's Orthographic Projection and Isometrical Drawing, 18mo.....	1s.
Kimber's Graduation Mathematics, 8vo. 2s. or with Solutions, 6s. 6d. — Mathematical Course for the University of London, 8vo.	12s.
PART I. for Matriculation, separately, 1s. 6d. Key, in 2 Parts, 5s. each.	
Milburn's Mathematical Formulæ for Candidates	Nearly ready.
Nesbit's Practical Land Surveying, 8vo.....	12s.
Pierce's Solid or Descriptive Geometry, post 4to.	12s. 6d.
Salmon's Treatise on Conic Sections, 8vo.	12s.
Winter's Mathematical Exercises, post 8vo.....	6s. 6d.
Winter's Elementary Geometrical Drawing, Part I. post 8vo. 3s. 6d. Part II. 6s. 6d.	
Wrigley's Examples in Pure and Mixed Mathematics, 8vo.	8s. 6d.

Musical Works by John Hullah, LL.D.

Chromatic Scale, with the Inflected Syllables, on Large Sheet	1s. 6d.
Card of Chromatic Scale, price 1d.	
Exercises for the Cultivation of the Voice. For Soprano or Tenor	2s. 6d.
Grammar of Musical Harmony, royal 8vo. Two Parts.....	each 1s. 6d.
Exercises to Grammar of Musical Harmony	1s.
Grammar of Counterpoint. Part I. super-royal 8vo.	2s. 6d.
Hullah's Manual of Singing. Parts I. & II. 2s. 6d. or together.....	5s.
Exercises and Figures contained in Parts I. & II. Books I. & II.	each 6d.
Large Sheets, containing the Figures in Part I. Nos. 1 to 8 in a Parcel.....	6s.
Large Sheets, containing the Exercises in Part I. Nos. 9 to 40, in Four Parcels of Eight Nos. each	per Parcel 6s.
Large Sheets, the Figures in Part II. Nos. 41 to 52 in a Parcel	9s.
Hymns for the Young, set to Music, royal 8vo.	6d.
Infant School Songs	6d.
Notation, the Musical Alphabet, crown 8vo.	6d.
Old English Songs for Schools, Harmonised	6d.

Sullivan's <i>Geography Generalised</i> , fcp. 2s. or with Maps, 2s. 6d.	
— <i>Introduction to Ancient and Modern Geography</i> , 18mo.	1s.

Physical Geography and Geology.

Cotta's <i>Rocks Classified and Described</i> , by Lawrence, post 8vo.	14s.
Hughes's (E.) <i>Outlines of Physical Geography</i> , 12mo. 3s. 6d. Questions, 6d.	
— (W.) <i>Physical Geography for Beginners</i> , 18mo.	1s.
Keith's <i>Treatise on the Use of the Globes</i> , 12mo.	6s. 6d. Key 2s. 6d.
Mauzy's <i>Physical Geography for Schools and General Readers</i> , fcp. 8vo.	3s. 6d.
Nicols's <i>Puzzle of Life (Elementary Geology)</i> , crown 8vo.	3s. 6d.
Proctor's <i>Elementary Physical Geography</i> , fcp. 8vo.	1s. 6d.
Woodward's <i>Geology of England and Wales</i> , crown 8vo.	14s.

School Atlases and Maps.

Butler's <i>Atlas of Modern Geography</i> , royal 8vo.	10s. 6d.
— <i>Junior Modern Atlas, comprising 12 Maps</i> , royal 8vo.	4s. 6d.
— <i>Atlas of Ancient Geography</i> , royal 8vo.	12s.
— <i>Junior Ancient Atlas, comprising 12 Maps</i> , royal 8vo.	4s. 6d.
— <i>General Atlas, Modern & Ancient</i> , royal 4to.	22s.
Public Schools <i>Atlas of Ancient Geography</i> , 25 entirely New Coloured Maps, imperial 8vo. or imperial 4to. 7s. 6d. cloth.	
Public Schools <i>Atlas of Modern Geography</i> , 31 entirely New Coloured Maps, imperial 8vo. or imperial 4to. 5s. cloth.	

Natural History and Botany.

Lindley and Moore's <i>Treasury of Botany, Two Parts</i> , fcp. 8vo.	12s.
Macalister's <i>Systematic Zoology of Vertebrates</i> , 8vo.	10s. 6d.
Maunder's <i>Treasury of Natural History</i> , revised by Holdsworth, fcp. 8vo. 6s.	
Owen's <i>Natural History for Beginners</i> , 18mo. Two Parts 9d. each, or 1 vol. 2s.	
— <i>Stepping-Stone to Natural History</i> , 18mo.	2s. 6d.
Or in Two Parts.—I. <i>Mammalia</i> , 1s. II. <i>Birds, Reptiles, and Fishes</i>	1s.

Wood's Bible Animals, 8vo.	14s.
— Homes without Hands, 8vo.	14s.
— Insects at Home, 8vo.	14s.
— Insects Abroad, 8vo.	14s.
— Out of Doors, crown 8vo.	7s. 6d.
— Strange Dwellings, crown 8vo.	7s. 6d.

Chemistry and Telegraphy.

Armstrong's Organic Chemistry, small 8vo.	3s. 6d.
Crookes's Select Methods in Chemical Analysis, crown 8vo.	12s. 6d.
Culler's Practical Telegraphy, 8vo.	14s.
Miller's Elements of Chemistry, 3 vols. 8vo.	
Part I.—Chemical Physics, Sixth Edition, 16s.	
Part II.—Inorganic Chemistry, Sixth Edition, 24s.	
Part III.—Organic Chemistry, Sixth Edition in the press.	
— Introduction to Inorganic Chemistry, small 8vo.	3s. 6d.
Odling's Course of Practical Chemistry, for Medical Students, crown 8vo.	6s.
Preece and Sivewright's Telegraphy, crown 8vo.	3s. 6d.
Tate's Outlines of Experimental Chemistry, 18mo.	9d.
Thorpe's Quantitative Chemical Analysis, small 8vo.	4s. 6d.
Thorpe and Muir's Qualitative Chemical Analysis, small 8vo.	3s. 6d.
Tilden's Chemical Philosophy, small 8vo.	3s. 6d.
— Practical Chemistry, Principles of Qualitative Analysis, fcp. 8vo.	1s. 6d.

Natural Philosophy and Natural Science.

Bloxam's Metals, their Properties and Treatment, small 8vo.	2s. 6d.
Day's Numerical Examples in Heat, crown 8vo.	1s. 6d.
— Electrical & Magnetic Measurement, 18mo.	3s. 6d.
Downing's Practical Hydraulics, Part I. 8vo.	5s. 6d.
Ganot's Physics, translated by Prof. E. Atkinson, large crown 8vo.	15s.
— Natural Philosophy, translated by the same, crown 8vo.	7s. 6d.
Gore's Art of Scientific Discovery, crown 8vo.	15s.
Helmholtz' Popular Lectures on Scientific Subjects, 8vo.	12s. 6d.
Irving's Short Manual of Heat, small 8vo.	2s. 6d.
Jenkin's Electricity & Magnetism, small 8vo.	2s. 6d.
Marrot's Conversations on Natural Philosophy, fcp. 8vo.	7s. 6d.
Maxwell's Theory of Heat, small 8vo.	3s. 6d.
Merrifield's Natural Science Reading Books.	
Tate's Light & Heat, for the use of Beginners, 18mo.	9d.
— Hydrostatics, Hydraulics & Pneumatics, 18mo.	9d.
— Electricity, explained for the use of Beginners, 18mo.	9d.
— Magnetism, Voltaic Electricity & Electro-Dynamics, 18mo.	9d.
Tyndall's Lesson in Electricity, with 58 Woodcuts, crown 8vo.	2s. 6d.
— Notes of Lectures on Electricity, 1s. sewed, 1s. 6d. cloth.	
— Notes of Lectures on Light, 1s. sewed, 1s. 6d. cloth.	
Weinhold's Introduction to Experimental Physics, 8vo.	31s. 6d.

Text-Books of Science, Mechanical and Physical.

Abney's Treatise on Photography, small 8vo.	3s. 6d.
Anderson's (Sir John) Strength of Materials.	3s. 6d.
Armstrong's Organic Chemistry.	3s. 6d.
Barry's Railway Appliances.	3s. 6d.
Bloxam's Metals.	3s. 6d.
Goodeve's Elements of Mechanism.	3s. 6d.
— Principles of Mechanics.	3s. 6d.
Gore's Art of Electro-Metallurgy.	6s.
Griffin's Algebra and Trigonometry.	3s. 6d.

London, LONGMANS & CO.

Jenkin's Electricity and Magnetism	3s. 6d.
Maxwell's Theory of Heat	3s. 6d.
Merrifield's Technical Arithmetic and Mensuration	3s. 6d.
Miller's Inorganic Chemistry	3s. 6d.
Preese & Sivewright's Telegraphy	3s. 6d.
Rutley's Study of Rocks, a Text-Book of Petrology	4s. 6d.
Shelley's Workshop Appliances	3s. 6d.
Thorne's Structural and Physiological Botany	6s.
Thorpe's Quantitative Chemical Analysis	4s. 6d.
Thorpe & Muir's Qualitative Analysis	3s. 6d.
Tilden's Chemical Philosophy	3s. 6d.
Unwin's Elements of Machine Design	3s. 6d.
Watson's Plane and Solid Geometry	3s. 6d.

The London Science Class-Books, Elementary Series.

Astronomy, by R. S. Ball, LL.D. F.R.S.	1s. 6d.
Botany, Morphology and Physiology, by W. B. McNab, M.D.	1s. 6d.
— the Classification of Plants, by W. B. McNab, M.D.	1s. 6d.
Geometry, Congruent Figures, by O. Henrici, F.R.S.	1s. 6d.
Hydrostatics and Pneumatics, by P. Magnus, B.Sc. 1s. 6d. or with Answers 2s.	
Mechanics, by R. S. Ball, LL.D. F.R.S.	1s. 6d.
Practical Physics : Molecular Physics & Sound, by F. Guthrie, F.R.S.	1s. 6d.
Thermodynamics, by B. Wormell, M.A. D.Sc.	1s. 6d.
Zoology of Vertebrate Animals, by A. McAlister, M.D.	1s. 6d.
Zoology of Invertebrate Animals, by A. McAlister, M.D.	1s. 6d.

Mechanics and Mechanism.

Barry's Railway Appliances, small 8vo. Woodcuts	3s. 6d.
Goodeve's Elements of Mechanism, small 8vo.	3s. 6d.
— Principles of Mechanics, small 8vo.	3s. 6d.
Houghton's Animal Mechanics, 8vo.	11s.
Magnus's Lessons in Elementary Mechanics, small 8vo.	3s. 6d.
Shelley's Workshop Appliances, small 8vo. Woodcuts	3s. 6d.
Tate's Exercises on Mechanics and Natural Philosophy, 12mo. 2s. Key 3s. 6d.	
— Mechanics and the Steam-Engine, for Beginners, 18mo.	9d.
Twisden's Introduction to Practical Mechanics, crown 8vo.	10s. 6d.
— First Lessons in Theoretical Mechanics, crown 8vo.	8s. 6d.
Willis's Principles of Mechanism, 8vo.	18s.

Engineering, Architecture, &c.

Anderson (Sir J.) on the Strength of Materials and Structures, small 8vo. 3s. 6d.	
Bourne's Treatise on the Steam-Engine, 4to.	42s.
— Catechism of the Steam-Engine, fcp. 8vo.	6s.
— Recent Improvements in the Steam-Engine, fcp. 8vo.	6s.
— Handbook of the Steam-Engine, fcp. 8vo.	9s.
Downing's Elements of Practical Construction, PART I. 8vo. Plates	14s.
Fairbairn's Mills and Millwork, 1 vol. 8vo.	25s.
— Useful Information for Engineers. 3 vols. crown 8vo.	51s. 6d.
Gwilt's Encyclopedia of Architecture, 8vo.	53s. 6d.
Main and Brown's Marine Steam-Engine, 8vo.	12s. 6d.
— — Indicator & Dynamometer, 8vo.	4s. 6d.
— — Questions on the Steam-Engine, 8vo.	5s. 6d.
Mitchell's Stepping-Stone to Architecture, 18mo. Woodcuts	1s.

London, LONGMANS & CO.

Popular Astronomy and Navigation.

Brinkley's Astronomy, by Stubbs & Brinnow, crown 8vo.....	6s.
Evers's Navigation & Great Circle Sailing, 18mo.	1s.
Herschel's Outlines of Astronomy, Twelfth Edition, square crown 8vo.	12s.
Jean's Handbook for the Stars, royal 8vo.....	4s. 6d.
— Navigation and Nautical Astronomy, royal 8vo. <i>Practical</i> , 7s. 6d. Part II. <i>Theoretical</i> , 7s. 6d. or the 2 Parts in 1 vol. price 14s.	
Laughton's Nautical Surveying, small 8vo.	6s.
Merrifield's Magnetism & Deviation of the Compass, 18mo.	1s. 6d.
Proctor's Lessons in Elementary Astronomy, fcp. 8vo.	1s. 6d.
— Library Star Atlas, folio.....	15s.
— New Star Atlas for Schools, crown 8vo.	5s.
— Handbook for the Stars, square fcp. 8vo.....	5s.
The Stepping-Stone to Astronomy, 18mo.	1s.
Tate's Astronomy and the use of the Globes, for Beginners, 18mo.	9d.

Animal Physiology and Preservation of Health.

Bray's Education of the Feelings, crown 8vo.....	2s. 6d.
— Physiology and the Laws of Health, 11th Thousand, fcp. 8vo.	1s. 6d.
— Diagrams for Class Teaching.....per pair	6s. 6d.
Buckton's Food and Home Cookery, crown 8vo.....	2s.
— Health in the House, crown 8vo.	2s.
— Town & Window Gardening, crown 8vo.	2s.
Hartley's Air and its Relations to Life, small 8vo.	6s.
House I Live In; Structure and Functions of the Human Body, 18mo.	2s. 6d.
Mapother's Animal Physiology, 18mo.	1s.

General Knowledge and Chronology.

Crook's Events of England in Rhyme, square 16mo.	1s.
Slater's <i>Sententia Chronologica</i> , the Original Work, 12mo.	1s. 6d.
— — — improved by Miss Sewall, 12mo.	2s. 6d.
Stepping-Stone (The) to Knowledge, 18mo.	1s.
Second Series of the Stepping-Stone to General Knowledge, 18mo.	1s.
Sterne's Questions on Generalities, Two Series, each 2s. Keys.....each	4s.

Mythology and Antiquities.

Becker's <i>Gallus</i> , Roman Scenes of the Time of Augustus, post 8vo.	7s. 6d.
— <i>Charities</i> , illustrating the Private Life of the Ancient Greeks ...	7s. 6d.
Ewald's Antiquities of Israel, translated by Solly, 8vo.	12s. 6d.
Hort's New Pantheon, 18mo. with 17 Plates.....	2s. 6d.
Rich's Illustrated Dictionary of Roman and Greek Antiquities, post 8vo....	7s. 6d.

Biography.

Gleig's Life of the Duke of Wellington, crown 8vo.	6s.
Jones's Life of Sir Martin Frobiisher, crown 8vo.	6s.
Macaulay's Olive, annotated by H. C. Bowen, M.A. fcp. 8vo.	2s. 6d.
Maunder's Biographical Treasury, re-written by W. L. R. Oates, fcp. 8vo. 6s.	
Stepping-Stone (The) to Biography, 18mo.	1s.

Epochs of Modern History.

Church's Beginning of the Middle Ages, fcp. 8vo. Maps.....	2s. 6d.
Cordery's French Revolution to the Battle of Waterloo	In preparation.
Cox's Crusades, fcp. 8vo. Maps	2s. 6d.
Creighton's Age of Elizabeth, fcp. 8vo. Maps	2s. 6d.
Gairdner's Houses of Lancaster & York, fcp. 8vo. Maps.....	2s. 6d.
Gardiner's Thirty Years' War, 1618-1648, fcp. 8vo. Maps	2s. 6d.

London, LONGMANS & CO.

Gardiner's First Two Stuarts and the Puritan Revolution, fop. 8vo. Maps	2s. 6d.
Hale's Fall of the Stuarts, fop. 8vo. Maps	2s. 6d.
Johnson's Normans in Europe, fop. 8vo. Maps	2s. 6d.
Longman's Frederick the Great and the 7 Years' War	In preparation.
Ludlow's War of American Independence, fop. 8vo. Maps	2s. 6d.
McCarthy's Epoch of Parliamentary Reform	In preparation.
Moberly's Early Tudors	In preparation.
Morris's Age of Anne, fop. 8vo. Maps	2s. 6d.
— Early Hanoverians	In preparation.
Seeborn's Protestant Revolution, fop. 8vo. Maps	2s. 6d.
Stubbs's Early Plantagenets, fop. 8vo. Maps	2s. 6d.
— Empire under the House of Hohenstaufen	In preparation.
Warburton's Edward the Third, fop. 8vo. Maps	2s. 6d.

Epochs of English History.

Creighton's Shilling History of England, Introductory, fop. 8vo	1s.
Browning's Modern England, from 1820 to 1876	9d.
Cordery's Struggle against Absolute Monarchy, 1603-1688, fop. Maps	9d.
Creighton's England a Continental Power, 1066-1216, fop. Maps	9d.
— Tudors and the Reformation, 1485-1603, fop. 8vo. Maps	9d.
Powell's Early England up to the Norman Conquest, fop. 8vo. Maps	1s.
Rowley's Rise of the People and Growth of Parliament, 1215-1485, fop. Maps	9d.
— Settlement of the Constitution, 1688-1778, fop. Maps	9d.
Tancock's England during the Revolutionary Wars, 1778-1830	9d.
Epochs of English History, complete in 1 vol. fop. 8vo.	5s.

British History.

Armitage's Childhood of the English Nation, fop. 8vo.	2s. 6d.
Bartle's Synopsis of English History, fop. 8vo	2s. 6d.
Cantlay's English History Analysed, fop. 8vo.	2s.
Catechism of English History, edited by Miss Sewell, 18mo.	1s. 6d.
Epochs of English History, edited by Creighton, fop. 8vo.	5s.
Gairdner's Richard III, and Perkin Warbeck, crown 8vo.	10s. 6d.
Gleig's School History of England, abridged, 12mo.	6s.
— First Book of History—England, 18mo. 2s. or 3 Parts, 9d. each.	
— British Colonies, or Second Book of History, 18mo.	1s.
— British India, or Third Book of History, 18mo.	9d.
— Historical Questions on the above Three Histories, 18mo.	9d.
Littlewood's Essentials of English History, fop. 8vo.	3s.
Lupton's Examination-Papers in History, crown 8vo.	1s.
— English History, revised, crown 8vo.	7s. 6d.
Macaulay's History of England, Student's Edition, 2 vols. crown 8vo.	12s.
Morris's Class-Book History of England, fop. 8vo.	3s. 6d.
The Stepping-Stone to English History, 18mo.	1s.
The Stepping-Stone to Irish History, 18mo.	1s.
Turner's Analysis of English and French History, fop. 8vo.	2s. 6d.

Epochs of Ancient History.

Beauly's Gracchi, Marius and Sulla, fop. 8vo. Maps	2s. 6d.
Capes's Age of the Antonines, fop. 8vo. Maps	2s. 6d.
— Early Roman Empire, fop. 8vo. Maps	2s. 6d.
Cox's Athenian Empire, fop. 8vo. Maps	2s. 6d.
